Confocal Microscopy Stephen W. Paddock,2008-02-03 In Confocal Microscopy Methods and Protocols, Stephen Paddock and a highly skilled panel of experts lead the researcher using confocal techniques from the bench top, through the imaging process, to the journal page. They concisely describe all the key stages of confocal imaging-from tissue sampling methods, through the staining process, to the manipulation, presentation, and publication of the realized image. Written in a user-friendly, nontechnical style, the methods specifically cover most of the commonly used model organisms: worms, sea urchins, flies, plants, yeast, frogs, and zebrafish. Centered in the many biological applications of the confocal microscope, the book makes possible the successful imaging of both fixed and living specimens using primarily the laser scanning confocal microscope. The powerful hands-on methods collected in Confocal Microscopy Methods and Protocols will help even the novice to produce first-class cover-quality confocal images.

Widescreen Worldwide John Belton,Sheldon Hall,Stephen Neale,2010 Examining widescreen cinema as a worldwide aesthetic and industrial phenomenon, the essays in this volume situate the individual expressions of this new technology within the larger cultural and industrial practices that inform them. What Hollywood sought to market globally as CinemaScope, SuperScope, Techniscope, Technirama, and Panavision took indigenous form in a host of compatible anamorphic formats developed around the world. The book documents how the aesthetics of the first wave of American widescreen films underwent revision in Europe and Asia as filmmakers brought their own idiolect to the language of widescreen mise-en-scène, editing, and sound practices. The work of Otto Preminger, Anthony Mann, Samuel Fuller, Sam Peckinpah, Seijun Suzuki, Kihachi Okamoto, and Tai Kato, among others, is addressed.

Scientific Computing and Cultural Heritage Hans Georg Bock,Willi Jäger,Michael J. Winckler,2012-10-22 The sheer computing power of modern information technology is changing the face of research not just in science, technology and mathematics, but in humanities and cultural studies too. Recent decades have seen a major shift both in attitudes and deployment of computers, which are now vital and highly effective tools in disciplines where they were once viewed as elaborate typewriters. This revealing volume details the vast array of computing applications that researchers in the humanities now have recourse to, including the dissemination of scholarly information through virtual 'co-laboratories', data retrieval, and the modeling of complex processes that contribute to our natural and cultural heritage. One key area covered in this book is the versatility of computers in presenting images and graphics, which is transforming the analysis of data sets and archaeological reconstructions alike. The papers published here are grouped into three broad categories that cover mathematical and computational methods, research developments in information systems, and a detailed portrayal of ongoing work on documenting, restoring and presenting cultural monuments including the temples in Pompeii and the Banteay Chhmar temples of the Angkorian period in present-day Cambodia. Originally presented at a research workshop in Heidelberg, Germany, they reflect the rapidly developing identity of computational humanities as an interdisciplinary field in its own right, as well as demonstrating the breadth of perspectives in this young and vibrant research area.

A Synopsis of English Syntax Eugene A. Nida,2013-02-06

70 mm, Bigger than life Gabriele Jatho,2009 For many cineastes, 70 mm is far more than just the designation of a film size. Its large-format images combine high resolution, sharp picture, and color quality with overwhelming sound quality. 70 mm represents a unique kind of harmony, a code signifying cinema's true potential: a singularly impressive experience for both the eye and the ear. This book is about the history and technical development of wide-gauge film. It contains an essay and glossary by Gert Koshofer, a comprehensive list of 70 mm film titles (with commentaries in some cases) covering productions from the USA, the USSR, and Europe. There is also a data section, with detailed filmographic information and contemporary film criticism, documenting all the films in the Retrospective "70 mm - Bigger than Life."

The DNA of God Leoncio A. Garza-Valdes,2012-05-09 In 1988, radiocarbon dating showed that the Shroud of Turin--long regarded as the burial cloth of Jesus of Nazareth--could not be from the time of Jesus but was of a more recent origin. What scientists did not know at that time, but what author Dr. Leoncio Garza-Valdes came to discover, is that bacteria produce an organic coating (what he calls a bioplastic coating) over time on ancient textiles, textiles including the Shroud itself. This coating, which the author first discovered on Mayan artifacts, so distorts the carbon dating process that objects on which it is found (such as the Shroud) are actually significantly older than the data show. The scientific community has hailed Dr. Garza-Valdes's findings since this new knowledge is of significance for archaeologists around the world. For those interested in the mysterious history of the Shroud, it is again possible to regard this artifact as originating in the first century--and consequently as being the burial cloth of Jesus. But Dr. Garza-Valdes's amazing discoveries did not end with this breakthrough. His examination of pieces of the Shroud under a microscope has revealed incredible clues consistent with the Scriptural accounts of the death of Jesus. Bacteria that produce acetic acid (vinegar) were isolated from the Shroud. Do they belong to the vinegar offered to Jesus before his death on the cross? Could human blood remnants that contain a man's DNA be traces of the blood of Jesus? Does it contain the DNA of God? The DNA of God? is the fascinating story of this microbiologist's journey of discovery and of the earthshaking secrets he has revealed about the Shroud of Turin.

William Grant Still Catherine Parsons Smith,2008 In this compact introduction to the life and work of eminent African American composer William Grant Still (1895-1978), Catherine Parsons Smith tracks the composer's interrelated careers in popular and concert music. Still merged both musical traditions in his work, studying composition with George W. Chadwick at the New England Conservatory, collaborating with Langston Hughes on *Troubled Island*, and working as a commercial arranger and composer on Broadway and radio during the Harlem Renaissance. Still also played in the pit band for *Shuffle Along*, served as recording director for the first black-owned record label, Black Swan, and arranged music for artists such as Sophie Tucker, Paul Whiteman, and Artie Shaw. Best known for his *Afro-American Symphony* and other works that drew heavily on black American musical heritage, Still struggled against financial hardship and declining attention to his work, which he attributed to political and racist conspiracies. This dean of Afro-American composers created his own, unique version of musical modernism, influencing commercial music, symphonic music, and opera in the process.
