**Introduction to Modeling Cognitive Processes** Tom Verguts, 2022-02-01 An introduction to computational modeling for cognitive neuroscientists, covering both foundational work and recent developments. Cognitive neuroscientists need sophisticated conceptual tools to make sense of their field's proliferation of novel theories, methods, and data. Computational modeling is such a tool, enabling researchers to turn theories into precise formulations. This book offers a mathematically gentle and theoretically unified introduction to modeling cognitive processes. Theoretical exercises of varying degrees of difficulty throughout help readers develop their modeling skills. After a general introduction to cognitive modeling and optimization, the book covers models of decision making; supervised learning algorithms, including Hebbian learning, delta rule, and backpropagation; the statistical model analysis methods of model parameter estimation and model evaluation; the three recent cognitive modeling approaches of reinforcement learning, unsupervised learning, and Bayesian models; and models of social interaction. All mathematical concepts are introduced gradually, with no background in advanced topics required. Hints and solutions for exercises and a glossary follow the main text. All code in the book is Python, with the Spyder editor in the Anaconda environment. A GitHub repository with Python files enables readers to access the computer code used and start programming themselves. The book is suitable as an introduction to modeling cognitive processes for students across a range of disciplines and as a reference for researchers interested in a broad overview.

Making Room Alan Moore, Alan Smart, 2015 Making Room is an anthology of texts on art, media and aesthetic practice in the context of squatting, occupation

and urban-space activism. It includes pieces by activist researchers working between the academy and the movements they write about, as well as journalistic first-person narratives by squatters, original photography and interviews with artists, theorists and activists involved in struggles over urban space and creative production in the city. Topics include brief histories of squatting in the UK, Germany and the Netherlands; the creation of Temporary Autonomous Zones; Puerto Rican occupations in New York; the influence of the Situationists on French squatting; and activism and camping at Documentas 10, 11 and 13. Throughout, cultural production appears in various forms ranging from conventional art practices to the organizing of communities and networks, to the production of media and setting up of information systems.

**Designing Media** Bill Moggridge, 2010-10-15 Connections and clashes between new and old media, as told by interviewees ranging from the founder of Twitter to the publisher of the New York Times. Mainstream media, often known simply as MSM, have not yet disappeared in a digital takeover of the media landscape. But the long-dominant MSM—television, radio, newspapers, magazines, and books—have had to respond to emergent digital media. Newspapers have interactive Web sites; television broadcasts over the Internet; books are published in both electronic and print editions. In *Designing Media*, design guru Bill Moggridge examines connections and conflicts between old and new media, describing how the MSM have changed and how new patterns of media consumption are emerging. The book features interviews with thirty-seven significant figures in both traditional and new forms of mass communication; interviewees range from the publisher of the New York Times to the founder of Twitter. We learn about innovations in media

that rely on contributions from a crowd (or a community), as told by Wikipedia's Jimmy Wales and Craigslist's Craig Newmark; how the band OK Go built a following using YouTube; how real-time connections between dispatchers and couriers inspired Twitter; how a BusinessWeek blog became a quarterly printed supplement to the magazine; and how e-readers have evolved from Rocket eBook to QUE. Ira Glass compares the intimacy of radio to that of the Internet; the producer of PBS's Frontline supports the program's investigative journalism by putting documentation of its findings online; and the developers of Google's Trendalyzer software describe its beginnings as animations that accompanied lectures about social and economic development in rural Africa. At the end of each chapter, Moggridge comments on the implications for designing media. Designing Media is illustrated with hundreds of images, with color throughout. A DVD accompanying the book includes excerpts from all of the interviews, and the material can be browsed at [www.designing-media.com](http://www.designing-media.com). Interviews with: Chris Anderson, Rich Archuleta, Blixa Bargeld, Colin Callender, Fred Deakin, Martin Eberhard, David Fanning, Jane Friedman, Mark Gerzon, Ira Glass, Nat Hunter, Chad Hurley, Joel Hyatt, Alex Juhasz, Jorge Just, Alex MacLean, Bob Mason, Roger McNamee, Jeremy Merle, Craig Newmark, Bruce Nussbaum, Alice Rawsthorn, Anna Rosling Rönnlund, Hans Rosling, Ola Rosling, Paul Saffo, Jesse Scanlon, DJ Spooky, Neil Stevenson, Arthur Sulzberger Jr., Shinichi Takemura, James Truman, Jimmy Wales, Tim Westergren, Ev Williams, Erin Zhu, Mark Zuckerberg

Biology of Schizophrenia and Affective Disease Association for Research in Nervous and Mental Disease. Meeting, 1996 The Decade of the Brain has brought with it many advances in our understanding of the biology of major mental disorders. Biology of Schizophrenia and Affective Disease provides a state-of-the-art look at the biological bases of severe mental illness from the perspective of the researchers making these exceptional discoveries. In 17 chapters, some of the best investigators in the field furnish overviews of their ground-breaking findings and set course for future research efforts. From the biology of stress to excitotoxicity in the development of corticolimbic alterations in the schizophrenic brain, this outstanding reference tool explores the explosive progress in the fields of biochemistry, molecular genetics, neuroscience, and brain circuit anatomy and the resultant advances in nearly every aspect of the biology of the brain and mental illness. Dissolution of cerebral cortical mechanisms in patients with schizophrenia, linkage and molecular genetics in infantile autism, and postmortem studies of suicide victims and schizophrenic patients are among the topics covered. The book also discusses treatment issues, including the mechanisms of action of antidepressants and atypical antipsychotic drugs. Practitioners and students will find this volume an invaluable reference tool for understanding the mechanisms of normal and pathological brain function and potential areas for further insight into the biological bases of mental illness.

**Neurotransmitter Transporters** Maarten E. A. Reith, 2002-05-15 Neurotransmission is a multicomponent process. Transmitters, released by neuronal activity, act on pre- and postsynaptic receptors, and many books detail advances in the receptor field. In addition, after their release from nerve endings, transmitters are removed from the neuronal vicinity by uptake into neuronal or glial cells by specific transporter proteins that have been studied intensely over the last 30 years; this information is scattered throughout numerous publishing vehicles. Therefore, the primary aim of this second edition of *Neurotransmitter Transporters: Structure, Function, and Regulation* is to offer a comprehensive picture of the characterization of neurotransmitter transporters and their biological roles. The transporter field has moved forward in stages. In the first phase, progress came from the use of substrate or blocker ligands selectively targeting transporters, the application of model systems allowing the study of transmitter transporter

shielded from storage, and the development of mathematical models for describing transport phenomena. In the second phase, roughly covering the last decade, advances in DNA techniques allowed the cloning of numerous genes coding for different transporter proteins. In the current, third stage, a wealth of information is being accumulated in studies relating transporter structure with function, experiments addressing regulation by posttranslational transfor- tion, investigations into transport modulation by trafficking processes and genomic influences, characterization of channel properties of tra- porters by electrophysiological approaches, and the creation of transgenic animals under- or overexpressing a given transporter protein.

**Mentalissimo** John Bannon,2016-08-10 In Mentalissimo, John brings his talents to bear on mentalism and mental magic with playing cards. I do card tricks, have a keen interest in mentalism and am a fanatic about the

construction of magic tricks. For me, a book like this is just what I look for. All of the above; in one place. You can expect: Squeaky-clean revelations of truly thought-of cards. Demonstrations of psychic ability that can't be explained simply as coincidence. Clear, commercial prediction systems. Offbeat treatments of classic mental effects from Add-a-Number to Out of This World. Thirty items are described and explained in twenty-one chapters. Almost all use regular unprepared cards. Two require a common gaffed card. Most are impromptu. A couple require a more-than-minimal stack. A few rely on easily-made external props. One employs a pack of ESP symbol cards. All are intelligently explained and laced with commentary and discussion. Come for the thought-provoking card effects; stay for the conversation.
