Sweep of Stars Maurice Broaddus,2022-03-29 Maurice Broaddus's *Sweep of Stars* is the first in a trilogy that explores the struggles of an empire. Epic in scope and intimate in voice, it follows members of the Muungano empire – a far-reaching coalition of city-states that stretches from O.E. (original earth) to Titan – as it faces an escalating series of threats. The beauty in blackness is its ability to transform. Like energy we are neither created nor destroyed, though many try. - West African Proverb The Muungano empire strived and struggled to form a utopia when they split away from old earth. Freeing themselves from the endless wars and oppression of their home planet in order to shape their own futures and create a far-reaching coalition of city-states that stretched from Earth and Mars to Titan. With the wisdom of their ancestors, the leadership of their elders, the power and vision of their scientists and warriors they charted a course to a better future. But the old powers could not allow them to thrive and have now set in motion new plots to destroy all that they've built. In the fire to come they will face down their greatest struggle yet. Amachi Adisa and other young leaders will contend with each other for the power to galvanize their people and chart the next course for the empire. Fela Buhari and her elite unit will take the fight to regions not seen by human eyes, but no training will be enough to bring them all home. Stacia Chikeke, captain of the starship Cypher, will face down enemies across the stars, and within her own vessel, as she searches for the answers that could save them all. The only way is forward. The Tectonic Setting and Origin of Cretaceous Batholiths within the North American Cordillera Robert S. Hildebrand,Joseph B. Whalen,2017-10-03 In this Special Paper, Hildebrand and Whalen present a big-picture, paradigm-busting synthesis that examines the tectonic setting, temporal relations, and geochemistry of many plutons within Cretaceous batholithic terranes of the North American Cordillera. In addition to their compelling tectonic synthesis, they argue that most of the batholiths are not products of arc magmatism as commonly believed, but instead were formed by slab failure during and after collision. They show that slab window and Precambrian TTG suites share many geochemical similarities with Cretaceous slab failure rocks. Geochemical and isotopic data indicate that the slab failure magmas were derived dominantly from the mantle and thus have been one of the largest contributors to growth of continental crust. The authors also note that slab failure plutons emplaced into the epizone are commonly associated with Cu-Au porphyries, as well as Li-Cs-Ta pegmatites.

Why Evolution is True Jerry A. Coyne, 2010-01-14 For all the discussion in the media about creationism and 'Intelligent Design', virtually nothing has been said about the evidence in question - the evidence for evolution by natural selection. Yet, as this succinct and important book shows, that evidence is vast, varied, and magnificent, and drawn from many disparate fields of science. The very latest research is uncovering a stream of evidence revealing evolution in action - from the actual observation of a species splitting into two, to new fossil discoveries, to the deciphering of the evidence stored in our genome. *Why Evolution is True* weaves together the many threads of modern work in genetics, palaeontology, geology, molecular biology, anatomy, and development to demonstrate the 'indelible stamp' of the processes first proposed by Darwin. It is a crisp, lucid, and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution.

Screams from the Dark Ellen Datlow, 2022-06-07 A bone-chilling anthology from legendary horror editor, Ellen Datlow, *Screams from the Dark* contains twenty-nine all-original tales about monsters. WINNER of the Bram Stoker Award for Superior Achievement in an Anthology! A Shirley Jackson Award Nominee! A Locus Award Finalist! From werewolves and vampires, to demons and aliens, the monster is one of the most recognizable figures in horror. But what makes something, or someone, monstrous? Award-winning and up-and-coming authors like Richard Kadrey, Cassandra Khaw, Indrapramit Das, Priya Sharma, and more attempt to answer this question. These all-new stories range from traditional to modern, from mainstream to literary, from familiar monsters to the unknown ... and unimaginable. This chilling collection has something to please—and terrify—everyone, so lock your doors, hide under your covers, and try not to scream. Contributors include: Ian Rogers, Fran Wilde, Gemma Files, Daryl Gregory, Priya Sharma, Brian Hodge, Joyce Carol Oates, Indrapramit Das, Siobhan Carroll, Richard Kadrey, Norman Partridge, Garry Kilworth, Caitlín R. Kiernan, Chikodili Emelumadu, Glen Hirshberg, A. C. Wise, Stephen Graham Jones, Kaaron Warren, Livia Llewellyn, Carole Johnstone, Margo Lanagan, Joe R. Tune In Mark Lewisohn, 2016-10-11 Now in paperback, *Tune In* is the New York Times bestseller by the world's leading Beatles authority – the first volume in a groundbreaking trilogy about the band that

revolutionized music. The Beatles have been in our lives for half a century and surely always will be. Still, somehow, their music excites, their influence resonates, their fame sustains. New generations find and love them, and while many other great artists come and go, the Beatles are beyond eclipse. So . . . who really were these people, and just how did it all happen? 'The Beatles story' is everywhere. Told wrong from early on, rehashed in every possible way and routinely robbed of its context, this is a phenomenon in urgent need of a bright new approach. In his series *All These Years*, Mark Lewisohn – the world-recognized Beatles historian – presses the Refresh button to relate the entire story as it's never been told or known before. Here is a full and accurate biography at last. It is certain to become the lasting word. *Tune In* is book one of three, exploring and explaining a period that is by very definition lesser-known: the formative pre-fame years, the teenage years, the Liverpool and Hamburg years – in many ways the most absorbing and incredible period of them all. The Beatles come together here in all their originality, attitude, style, speed, charisma, appeal, daring and honesty, the tools with which they're about to reshape the world. It's the Beatles in their own time, an amazing story of the ultimate rock band, a focused and colorful telling that builds and builds to leave four sharp lads from Liverpool on the very brink of a whole new kind of fame. Using impeccable research and resources, *Tune In* is a magisterial work, an independent biography that combines energy, clarity, objectivity, authority and insight. The text is anti-myth, tight and commanding – just like the Beatles themselves. Here is the Beatles story as it really was. Throw away what you think you know and start afresh.

The Design and Engineering of Curiosity Emily Lakdawalla,2018-03-27 This book describes the most complex machine ever sent to another planet: Curiosity. It is a one-ton robot with two brains, seventeen cameras, six wheels, nuclear power, and a laser beam on its head. No one human understands how all of its systems and instruments work. This essential reference to the Curiosity mission explains the engineering behind every system on the rover, from its rocket-powered jetpack to its radioisotope thermoelectric generator to its fiendishly complex sample handling system. Its lavishly illustrated text explains how all the instruments work -- its cameras, spectrometers, sample-cooking oven, and weather station -- and describes the instruments' abilities and limitations. It tells you how the systems have functioned on Mars, and how scientists and engineers have worked around problems developed on a faraway planet: holey wheels and broken focus lasers. And it explains the grueling mission operations schedule that keeps the rover working day in and day out.
