**The Evolution of Untethered Communications** National Research Council, Computer Science and Telecommunications Board, Committee on Evolution of Untethered Communications, 1998-01-01 In response to a request from the Defense Advanced Research Projects Agency, the committee studied a range of issues to help identify what strategies the Department of Defense might follow to meet its need for flexible, rapidly deployable communications systems. Taking into account the military's particular requirements for security, interoperability, and other capabilities as well as the extent to which commercial technology development can be expected to support these and related needs, the book recommends systems and component research as well as organizational changes to help the DOD field state-of-the-art, cost-effective untethered communications systems. In addition to advising DARPA on where its investment in information technology for mobile wireless communications systems can have the greatest impact, the book explores the evolution of wireless technology, the often fruitful synergy between commercial and military research and development efforts, and the technical challenges still to be overcome in making the dream of anytime, anywhere communications a reality.

China Dream, Space Dream Kevin Pollpeter, Eric Anderson, Jordan Wilson, Fan Yang, 2015-03-10 China's position in the world has been evolving. It seeks increased influence and independence from foreign powers with the ultimate goal of preserving China's sovereignty, independence, territorial integrity, and political system. Over the long term, China seeks to transform the international system to better suit its interests, but seeks to integrate itself into the existing international system over the short term with the goal of reshaping the Asia-Pacific political environment into one in which its interests must be given greater attention. China's pursuit of space power is intended to support this strategy. China views the development of space power as a necessary move for a country that wants to strengthen its national power. Indeed, China's goal is to become a space power on par with the United States and to foster a space industry that is the equal of those in the United States, Europe, and Russia. China takes a comprehensive, long-term approach to this goal that emphasizes the accrual of the military, economic, and political benefits space can provide.

**A Modern Introduction to International Law** Michael Barton Akehurst, 1987 This sixth edition has been completely revised and updated to take account of many new developments. It covers a variety of topics, from diplomatic immunity to human rights, and from recognition of government to war crimes. The author is particularly concerned with the relationship between international law and international politics, and he devotes special attention to such controversial topics as self-determination and the expropriation of foreign-owned property where the conflicting interests and attitudes of different states are most apparent.

Media on the Move Daya Kishan Thussu, 2006-10-31 Media on the Move provides a critical

analysis of the dynamics of the international flow of images and ideas. This comes at a time when the political, economic and technological contexts within which media organisations operate are becoming increasingly global. The surge in transnational traffic in media products has primarily benefited the major corporations such as Disney, AOL, Time Warner and News Corporation. However, as this book argues, new networks have emerged which buck this trend: Brazilian TV is watched in China, Indian films have a huge following in the Arab world and Al Jazeera has become a household name in the West. Combining a theoretical perspective on contra-flow of media with grounded case studies into one up-to-date and accessible volume, *Media on the Move* provides a much-needed guide to the globalization of media, going beyond the standard Anglo-American view of this evolving phenomenon.

The Oxford Handbook of International Organizations Jacob Katz Cogan, Ian Hurd, Ian Johnstone, 2016-11-10 Virtually every important question of public policy today involves an international organization. From trade to intellectual property to health policy and beyond, governments interact with international organizations in almost everything they do. Increasingly, individual citizens are directly affected by the work of international organizations. Aimed at academics, students, practitioners, and lawyers, this book gives a comprehensive overview of the world of international organizations today. It emphasizes both the practical aspects of their organization and operation, and the conceptual issues that arise at the junctures between nation-states and international authority, and between law and politics. While the focus is on inter-governmental organizations, the book also encompasses non-governmental organizations and public policy networks. With essays by the leading scholars and practitioners, the book first considers the main international organizations and the kinds of problems they address. This includes chapters on the organizations that relate to trade, humanitarian aid, peace operations, and more, as well as chapters on the history of international organizations. The book then looks at the constituent parts and internal functioning of international organizations. This addresses the internal management of the organization, and includes chapters on the distribution of decision-making power within the organizations, the structure of their assemblies, the role of Secretaries-General and other heads, budgets and finance, and other elements of complex bureaucracies at the international level. This book is essential reading for scholars, practitioners, and students alike.

**The Development of Outer Space** Thomas Gangale, 2009-07-23 This account of the evolution of outer space law examines key issues that fuel the debates over sovereignty and property rights designed to govern the future colonization and use of heavenly bodies other than our own. In the United States, lobbies for the commercial development of space have become increasingly antagonistic toward the international legal regime of outer space, condemning the 1967 Outer Space Treaty and the unratified 1979 Moon Agreement as anti-business. *The Development of Outer Space: Sovereignty and Property Rights in International Space Law* argues that the *res communis* principle enshrined in the Outer Space Treaty was misrepresented here, with essential help from corporate lobbyists whose real object was the defeat of the Law of the Sea Convention. Thomas Gangale builds

the legal case for reviving the moribund Moon Agreement as a prelude to negotiating a second Moon treaty to establish a regulatory regime for the exploitation of extraterrestrial resources. The author's account of the inception and evolution of outer space law to date is deeply informed by his appreciation of such terrestrial considerations as the nation-state system, the contending economic theories of capitalism and communism, and the post-colonial struggle between the developed space-faring nations and the developing earthbound nations.

**Fred the Clown** Roger Langridge, 2004-11-10 The signature creation of cartoonist Roger Langridge, Fred the Clown is the thinking man's idiot. Fred has an eye for the ladies, as well as several other organs, but the only part of themselves they're willing to share with him is a carefully placed kneecap. Fred the Clown's misadventures are a curious balance of bleakness and joyful absurdism; the universe may dump on Fred from a great height, but he never gives up. More often than not, they involve the pursuit of a lady—any lady will do, it seems, but bearded ladies are at the top of the list. Disappointment seems inevitable, and it usually is; yet, almost despite himself, Langridge will occasionally give Fred a happy ending out of nowhere... p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 13.9px Arial; color: #424242}
