**Dongri to Dubai - Six Decades of the Mumbai Mafia** Hussain Zaidi,2012-08-10 Dongri to Dubai is the first ever attempt to chronicle the history of the Mumbai mafia. It is the story of notorious gangsters like Haji Mastan, Karim Lala, Varadarajan Mudaliar, Chhota Rajan, Abu Salem, but above all, it is the story of a young man who went astray despite having a father in the police force. Dawood Ibrahim was initiated into crime as a pawn in the hands of the Mumbai police and went on to wipe out the competition and eventually became the Mumbai police's own nemesis.The narrative encompasses several milestones in the history of crime in India, from the rise of the Pathans, formation of the Dawood gang, the first ever supari, mafia's nefarious role in Bollywood, Dawood's move to Karachi, and Pakistan's subsequent alleged role in sheltering one of the most wanted persons in the world.This story is primarily about how a boy from Dongri became a don in Dubai, and captures his bravado, cunningness, focus, ambition, and lust for power in a gripping narrative. The meticulously researched book provides an in-depth and comprehensive account of the mafia's games of supremacy and internecine warfare.

**Advanced Air Pollution** Farhad Nejadkoorki,2011-08-17 Leading air quality professionals describe different aspects of air pollution. The book presents information on four broad areas of interest in the air pollution field; the air pollution monitoring; air quality modeling; the GIS techniques to manage air quality; the new approaches to manage air quality. This book fulfills the need on the latest concepts of air pollution science and provides comprehensive information on all relevant components relating to air pollution issues in urban areas and industries. The book is suitable for a variety of scientists who wish to follow application of the theory in practice in air pollution. Known for its broad case studies, the book emphasizes an insightful of the connection between sources and control of air pollution, rather than being a simple manual on the subject.

**Jingjiao** Roman Malek,2021-08-23 The contributions in this volume were mostly first presented at the conference Research on Nestorianism in China. Zhongguo jingjiao yanjiu 中国景教研究 held in Salzburg, 20– 26 May 2003. Like the conference, the volume explores the subject of Nestorianism (jingjiao, Luminous Religion) in a variety of aspects. The material of the present collection is organized in five parts. The first part presents different aspects of the past and current research on jingjiao. The second part discusses jingjiao in the Tang dynasty, especially the question of the Nestorian texts and documents, their authenticity and theology. The third part deals with the Nestorian inscriptions and remains from the Yuan dynasty, especially from Quanzhou. Part four is dedicated to questions of the Church of the East in Central Asia and other historically relevant countries. The last part of the book presents a Preliminary Bibliography on the Church of the East in China and Central Asia prepared especially for this volume.

**Molar Incisor Hypomineralization** Katrin Bekes,2022-10-31 Molar incisor hypomineralization (MIH) has become a much-discussed topic of interest that presents major challenges for dental professionals in practice and research. It is defined as a qualitative enamel defect that typically occurs on one or more first permanent molars with or without the involvement of the permanent incisors. This book serves as a comprehensive reference that critically appraises the controversies around MIH found in the scientific literature. Practical advice about diagnosis and treatment of the disease is provided, and the various clinical treatment options are explained in detail. The text is written for dental practitioners, postgraduate and undergraduate students and researchers, as well as anyone who would like to expand their knowledge of this contemporary topic in everyday clinical dentistry.

**Why They Died** Peter Bouckaert,Human Rights Watch (Organization),2007 The conflict between Israel and Hezbollah in July 2006 had a devastating effect on civilians in Lebanon. Israeli attacks killed at least at 1,109 Lebanese, the vast majority of them civilians. The strikes also injured 4, 399 people and displaced an estimated one million. This report presents the most extensive investigation to date that anyone has conducted into the circumtances surrounding these civilian deaths. Human Rights Watch visited more than 50 Lebanese villages, interviewed over 355 witnesses, and investigated 94 separate incidents of Israeli attacks. These attacks claimed the lives of 510 civilians, as well as 51 Hezbollah combatants--almost half of the Lebanese death in the conflict.

Housekeeping Marilynne Robinson,2015-11-03 The story of Ruth and her younger sister, Lucille, who grow up haphazardly, first under the care of their competent grandmother, then of two comically bumbling great-aunts, and finally of Sylvie, the eccentric and remote sister of their dead mother. The family house is in the small town of Fingerbone on a glacial lake in the Far West, the same lake where their grandfather died in a spectacular train wreck and their mother drove off a cliff to her death. It is a town chastened by an outsized landscape and extravagant weather, and chastened again by an awareness that the whole of human history had occurred elsewhere. Ruth and Lucille's struggle toward adulthood beautifully illuminates the price of loss and survival, and the dangerous and deep undertow of transience.--

*Teaching for Student Learning* Dick Arends,Ann Kilcher,2010-02-25 Teaching for Student Learning: Becoming an Accomplished Teacher shows teachers how to move from novice to expert status by integrating both research and the wisdom of practice into their teaching. It emphasizes how accomplished teachers gradually acquire and apply a broad repertoire of evidence-based teaching practices in the support of student learning. The book's content stems from three major fields of study: 1) theories and research on how people learn, including new insights from the cognitive and neurosciences; 2) research on classroom practices shown to have the greatest effect on student learning; and 3) research on effective schooling, defined as school-level factors that enhance student achievement and success. Although the book's major focus is on teaching, it devotes considerable space to describing how students learn and how the most effective and widely-used models of teaching connect to principles of student learning. Specifically, it describes how research on teaching, cognition, and neuroscience converge to provide an evidence-based science of learning which teachers can use to advance their practice. Key features include the following: Evidence-Based Practice – This theme is developed through: 1) an ongoing review and synthesis of research on teaching and learning and the resulting guidelines for practice and 2) boxed research summaries within the chapters. Instructional Repertoire Theme – Throughout the book teaching is viewed as an extremely complex activity that requires a repertoire of instructional strategies that, once mastered, can be drawn upon to fit specific classrooms and teaching situations. Standards-based School Environments – Education today is dominated by standards-based school environments. Unlike competing books, this one describes these environments and shows how they impact curriculum design and learning activities. The objective is to show how teachers can make standards-based education work for them. Pedagogical Features – In addition to an end-of-book glossary, each chapter contains research boxes, reflection boxes, itemized end-of-chapter summaries, and end-of-chapter learning activities. Website – An accompanying website contains a variety of field-oriented and site-based activities that teachers can do alone or with colleagues.

*Piri Reis Map of 1513* Gregory C. McIntosh,2012-03-15 One of the most beautiful maps to survive the Great Age of Discoveries, the 1513 world map drawn by Ottoman admiral Piri Reis is also one of the most mysterious. Gregory McIntosh has uncovered new

evidence in the map that shows it to be among the most important ever made. This detailed study offers new commentary and explication of a major milestone in cartography. Correcting earlier work of Paul Kahle and pointing out the traps that have caught subsequent scholars, McIntosh disproves the dubious conclusion that the Reis map embodied Columbus's Third Voyage map of 1498, showing that it draws instead on the Second Voyage of 1493-1496. He also refutes the popular misinterpretation that Reis's depictions of Antarctica are evidence of either ancient civilizations or extraterrestrial visitation. McIntosh brings together all that has been previously known about the map and also assembles for the first time the translations of all inscriptions on the map and analyzes all place-names given for New World and Atlantic islands. His work clarifies long-standing mysteries and opens up new ways of looking at the history of exploration.

**Uses of Industrial Minerals, Rocks and Freshwater** Kaulir Kisor Chatterjee,2009 This book discusses the uses of minerals. Today over 3,000 minerals have been reported and named of which 1800-2000 have been studied and described fully. We are able to gainfully use only around 100 or so minerals. Of course, none of these 'usable' minerals can be consumed as such by the people. They can neither be eaten, nor worn, nor fought with. They have to be converted to various products that can be used by them for living their material lives. Through interactions amongst different minerals, innumerable materials are turned out for fulfilling our material needs. And though there are some uni-product minerals, the majority of the minerals are the ones each of which eventually yields a multiplicity of final consumable products. However, in today's fast developing world, there is always a multiple choice available for technologies and grades of input materials. So, technology and input materials can be chosen to suit any grade of a mineral that is available in nature. The only constraints are the market price and the cost of mining the mineral. The cost always has to be less than the market price, the vagaries of which limit the range of flexibility regarding the specifications of grade. But, even if these specifications are not flexible enough at some point of time, the principles underlying the specifications remain valid all the time. And those principles, rather than the specifications, are emphasised in this outstanding book.

*Urban Energy Landscapes* Vanesa Castán Broto,2019-04-11 Research volume on urban energy transition that will have wide interdisciplinary appeal to researchers in energy, urban and environmental studies.

**Game-based Learning** Youngkyun Baek,2017 At a time when digital games are becoming much more commonly used in classrooms, Game-Based Learning: Theory, Strategies, and Performance Outcomes provides a much-needed guide to different forms and applications of digital game-based learning. This book brings together researchers and practitioners from around the world who share their theories, strategies, findings of case studies, and practical approaches to support better performance and learning

outcomes when learning with digital games. This book is intended to provide readers with three main parts of information. One is a clear and practical understanding of theory and research-based principles of game-based learning. This first section of the book includes fresh perspectives and an overview of existing and emerging theories in game-based learning, which are also presented in the form of case study findings and implications. The second section of this book gives readers the how to information needed to turn the understanding of intellectual grounding into effective practices of digital games for classroom use. The third part of this book also includes some practical approaches for evaluating different aspects of learning within the game-based learning context. This information about practical approaches is presented through chapters on achievements and performance outcomes. Game-Based Learning: Theory, Strategies, and Performance Outcomes synthesizes arguments, practices, and research findings on the effectiveness of different designs and approaches within game-based learning practices. But, a major message of this book is that the joint influence of implementation, context, and learner characteristics interacting with digital games is what determines learning and achievement outcomes. This book is intended for researchers, practitioners, designers, policy makers, and current and future teachers. The teacher/-educator will benefit from topics such as practical strategies to improve student performance, while researchers can use the findings from the case studies presented in this book as a foundation for future explorations and research studies.

*Intelligent Information Systems 2001* Mieczysław Kłopotek,Maciej Michalewicz,Slawomir T. Wierzchon,2001-06-06 The book offers a selection of papers presented at the international symposium Intelligent Information Systems X held in Zakopane, Poland. The papers report on progress in theory and applications of broadly understood artificial intelligence, including machine learning, knowledge discovery, knowledge based systems and reasoning, intelligent statistical analysis and soft computing (i.e. fuzzy and rough sets, neural networks, evolutionary algorithms and artificial immune systems). Interesting new theoretical results are presented and their practical applicability demonstrated. The volume also suggests challenging new research issues.

*Soft Computing Techniques and Applications* Robert John,2000-01-24 The book is a collection of papers presented in the United Kingdom at an international two day workshop on Soft Computing held at the De Montfort University. It consists of 38 papers representing the current interests in the fields of fuzzy logic, artificial neural networks and genetic algorithms. In particular there is a strong emphasis on the use of these techniques for applications that tackle real problems faced in industry. The strength of the work is that it is a snapshot of current important research interests in these areas, both from a research and application point of view. It will be of interest to researchers (both academic and from industry) as well as post graduate students who wish to see some of the more recent developments in the soft computing field.

Developments in Soft Computing Robert John,Ralph Birkenhead,2013-03-20 Soft Computing has come of age. In particular, Artificial Neural Networks, Fuzzy Logic and Evolutionary Computing now play an important role in many domains where traditional techniques have been found wanting. As this volume confirms, hybrid solutions that combine more than one of the Soft Computing approaches are particularly successful in many problem areas. This volume contains papers presented at the International Conference on Recent Advances in Soft Computing 2000 at De Montfort University in Leicester. The contributions cover both theoretical developments and practical applications in the various areas of Soft Computing.

Deep Eutectic Solvents for Medicine, Gas Solubilization and Extraction of Natural Substances Sophie Fourmentin,Margarida Costa Gomes,Eric Lichtfouse,2020-10-19 Initially considered as a sub-class of ionic liquids, eutectic mixtures are formed by mixtures of low

cost, often biodegradable Lewis or Bronsted acids and bases. Eutectic mixtures have gathered a growing scientific interest by the academic and industrial communities as they are interesting for many applications ranging from metal processing to biomass treatment or pharmaceuticals. This volume gathers contributions by some of the most active research groups in the world using eutectic mixtures for applications in separation, extraction or pharmaceutical and medical applications. The different contributions aim at a large overview of the field for these particular applications by reviewing literature data and presenting ground breaking research in the different fields.

Lectures on Soft Computing and Fuzzy Logic Antonio Di Nola,Giangiacomo Gerla,2001-07-31 The present volume collects selected papers arising from lectures delivered by the authors at the School on Fuzzy Logic and Soft Computing held during the years 1996/97/98/99 and sponsored by the Salerno University. The authors contributing to this volume agreed with editors to write down, to enlarge and, in many cases, to rethink their original lectures, in order to offer to readership, a more compact presentation of the proposed topics. The aim of the volume is to offer a picture, as a job in progress, of the effort that is coming in founding and developing soft computing's techniques. The volume contains papers aimed to report on recent results containing genuinely logical aspects of fuzzy logic. The topics treated in this area cover algebraic aspects of Lukasiewicz Logic, Fuzzy Logic as the logic of continuous t-norms, Intuitionistic Fuzzy Logic. Aspects of fuzzy logic based on similar ity relation are presented in connection with the problem of flexible querying in deductive database. Departing from fuzzy logic, some papers present re sults in Probability Logic treating computational aspects, results based on indishernability relation and a non commutative version of generalized effect algebras. Several strict applications of soft computing are presented in the book. Indeed we find applications ranging among pattern recognition, image and signal processing, evolutionary agents, fuzzy cellular networks, classi fication in fuzzy environments. The volume is then intended to serve as a reference work for foundational logico-algebraic aspect of Soft Computing and for concrete applications of soft computing technologies.

*Air Pollution by Photochemical Oxidants* Ian Colbeck,A. Robert MacKenzie,1994 Hardbound. This book gives a detailed description of the observed behaviour of photochemical oxidants, especially ozone, on the urban, regional, and global scales. The volume includes: basic introductions to the biochemistry and physics of biogenic and anthropogenic production of photochemical oxidant precursors; room-temperature rate coefficients for gas-phase reactions as an aid to intercomparison; the synthesis of recent observations of photochemical oxidants over all spatial and temporal scales of interest; and a large selection of examples from the real atmosphere.Throughout, the emphasis is on understanding topics under simplified or controlled conditions; this book will be of great value to photochemists, environmental chemists, and all those concerned with (atmospheric) pollution.
