A Concrete Introduction to Higher Algebra Lindsay N. Childs, 2012-12-04 An informal and readable introduction to higher algebra at the post-calculus level. The concepts of ring and field are introduced through study of the familiar examples of the integers and polynomials, with much emphasis placed on congruence classes leading the way to finite groups and finite fields. New examples and theory are integrated in a well-motivated fashion and made relevant by many applications -- to cryptography, coding, integration, history of mathematics, and especially to elementary and computational number theory. The later chapters include expositions of Rabin's probabilistic primality test, quadratic reciprocity, and the classification of finite fields. Over 900 exercises, ranging from routine examples to extensions of theory, are scattered throughout the book, with hints and answers for many of them included in an appendix.

VLSI Neural Network Systems Yuzo Hirai, 1992 This extremely expensive little book is probably worth the exorbitant price. Emotions and Material Culture Gerhard Jaritz, 2003 Material objects must always be seen in context with the humans who created and used them. It is

only possible to recognize and evaluate material culture in connection with human thought and behavior. The material world depends on the immaterial one, and vice versa. Neither sphere can exist without the other. In historical research, however, such contexts have not been considered regularly. In particular, the inter-connections between emotions and material culture have not been taken sufficiently into account in research. This was the reason for the Institut für Realienkunde des Mittelalters und der frühen Neuzeit to organize a round-table-discussion on Emotions and Material Culture and to publish its proceedings. The volume contains eleven contributions by specialists from eight countries. They show various possibilities to contextualize the material world and emotional behavior. They may be seen as a first step towards a material emotionology of the past. The complex results are intended to serve as a further impetus towards the systematic and comparative research into emotional communities and their material life in the Middle Ages and the early modern period.
