Document Image Processing for Scanning and Printing Ilia V. Safonov, Ilya V. Kurilin, Michael N. Rychagov, Ekaterina V. Tolstaya, 2019-03-25 This book continues first one of the same authors "Adaptive Image Processing Algorithms for Printing" and presents methods and software solutions for copying and scanning various types of documents by conventional office equipment, offering techniques for correction of distortions and enhancement of scanned documents; techniques for automatic cropping and de-skew; approaches for segmentation of text and picture regions; documents classifiers; approach for vectorization of symbols by approximation of their contour by curves; methods for optimal compression of scanned documents, algorithm for stitching parts of large originals; copy-protection methods by microprinting and embedding of hidden information to hardcopy; algorithmic approach for toner saving. In addition, method for integral printing is considered. Described techniques operate in automatic mode thanks to machine learning or ingenious heuristics. Most the techniques presented have a low computational complexity and memory consumption due to they were designed for firmware of embedded systems or software drivers. The book reflects the authors' practical experience in algorithm development for industrial R&D.

Transactions on Computational Collective Intelligence XXXII Ngoc Thanh Nguyen, Ryszard

Kowalczyk, Marcin Hernes, 2018-12-18 These transactions publish research in computer-based methods of computational collective intelligence (CCI) and their applications in a wide range of fields such as the semantic web, social networks, and multi-agent systems. TCCI strives to cover new methodological, theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals (artificial and/or natural). The application of multiple computational intelligence technologies, such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc., aims to support human and other collective intelligence and to create new forms of CCI in natural and/or artificial systems. This thirty-second issue presents 5 selected papers in the field of management, economics and computer science.

Library Use of QR Codes Primary Research Group, 2014 The study presents data from 50 academic, public and special libraries about how they are using QR codes. The report presents detailed information on how many QR codes are being used, where they are used, how they are generated and how much they are being used. The study looks at the growth of QR codes in libraries over time, and at how libraries are monitoring, publicizing and educating their patron base about them.

Digitizing Flat Media Joy M. Perrin, 2016 Here is a concise guide to the nuts and bolts of converting flat media (books, papers, maps, posters, slides, micro formats, etc) into digital files. It provides librarians and archivists with the practical knowledge to understand the process and decision making in the digitization of flat media. Instead of having to learn by trial and error, they will get a well-rounded education of the practical aspects of digitization and have a better understanding of their options. This is the stuff they don't teach you in school. People can be lured into thinking that all it takes to digitize something is a scanner and some metadata.

This guide illustrates the practical aspects of digitization such as: -the physical challenges of scanning books without cutting the spine, -the differences between a scanner that uses a scanning head vs a scanner that uses a camera, -the different options for workflow for digitized items, and -the reasons for choosing one scanner over another for reasons other than price. Digitizing Flat Media: Principles and Practices is intended to give librarians and archivists the benefit a seasoned digitization professional guiding them and helping them figure out exactly what needs to be done when.

Tutorial Anne R. Kenney, Stephen Chapman, 1995 This tutorial provides a means to estimate resolution requirements for the use of digital imaging technology in converting text-based material. It is suggested that benchmarks for resolution can be calculated by evaluating the physical attributes of source documents and by applying Quality Index formulas that have been derived from those established for preservation microfilming. The formulas are based on three variables: the height of the smallest significant character, the desired quality to be obtained in the reformatted version, and the resolution of the recording device. For the past several years, the Cornell University Department of Preservation and

Conservation (New York) has experimented using the Digital Quality Index formula to predict resolution requirements for a wide range of documents using a number of scanning devices. The results of these and other experiments confirm the utility of the Digital Quality Index formula for bitonal (black and white) scanning, but a slight modification to the formula is recommended in cases where grayscale scanning is employed. It is cautioned that the use of these formulas are for benchmarking purposes only. Assessment methods for scanner performance are discussed, and a continuous quality assurance program is recommended. Sections include: Where to Begin; How To Determine Digital Image Quality; Scanning Methodologies and Compression Techniques; Bitonal Scanning; Grayscale Scanning; Verifying the Predicted Quality Index; Visual Inspection; Suggested Guidelines and Summary of Recommendations. Seven figures and three tables illustrate the process and data. (Contains 20 references.) (MAS)

Laser Scanner Technology J. Apolinar Munoz Rodriguez, 2012 Laser scanning technology plays an important role in the science and engineering arena. The aim of the scanning is usually to create a digital version of the object surface. Multiple scanning is sometimes performed via multiple cameras to obtain all slides of the scene under study. Usually, optical tests are used to elucidate the power of laser scanning technology in the modern industry and in the research laboratories. This book describes the recent contributions reported by laser scanning technology in different areas around the world. The main topics of laser scanning described in this volume include full body scanning, traffic management, 3D survey process, bridge monitoring, tracking of scanning, human sensing, three-dimensional modelling, glacier monitoring and digitizing heritage monuments.
