Post 2030-Agenda and the Role of Space Annette Froehlich, 2018-06-13 This book provides a deep insight to which extent further improvement should be envisaged to ensure and improve the sustainable development beyond 2030 (the Sustainable Development Goals is a set of 17 global goals with 169 associated targets which the state community adopted in 2015). As the world, its environment, economy and society is getting more and more technical advanced, it is of high interest to analyze how space and its various applications can support this development. Once the Goals of the “2030 Agenda for Sustainable Development” will be achieved new challenges are waiting. The analysis takes into account a proactive use of artificial intelligence for the development based on space infrastructure. Another important aspect revolves around the economic development which asks for further analysis of the cryptocurrencies relationship with space applications and how to use space based cryptocurrencies for development. Environment-wise the challenges for a sustainable development on Earth i.e. water supply, but also in outer space are requested ensuring a sustainable exploration and exploitation of space and its orbital resources. The book also highlights possible contributions of the post-2030 space industry to global economic development based on satellite technology and the enlargement of the scope of application of satellite data in administration and Justice to ensure development of effective, accountable and transparent institutions at all levels to promote growth, stability and security and peace on global level.

2030: How Today's Biggest Trends Will Collide and Reshape the Future of Everything Mauro F. Guillén, 2020-08-25 AN INTERNATIONAL BESTSELLER Wall Street Journal Bestseller A Porchlight Book Bestseller Financial Times Best Books of 2020 Yahoo Finance Favorite Business Books of 2020 JP Morgan NextList 2021 selection Bold, provocative...illuminates why we're having fewer babies, the middle class is stagnating, unemployment is shifting, and new powers are rising." —ADAM GRANT The world is changing drastically before our eyes—will you be prepared for what comes next? A groundbreaking analysis from one of the world's foremost experts on global trends, including analysis on how COVID-19 will amplify and accelerate each of these changes. Once upon a time, the world was neatly divided into prosperous and backward economies. Babies were plentiful, workers outnumbered retirees, and people aspiring towards the middle class yearned to own homes and cars. Companies didn't need to see any further than Europe and the United States to do well. Printed money was legal tender for all debts, public and private. We grew up learning how to play the game, and we expected the rules to remain the same as we took our first job, started a family, saw our children grow up, and went into retirement with our finances secure. That world—and those rules—are over. By 2030, a new reality will take hold, and before you know it: - There will be more grandparents than grandchildren - The middle-class in Asia and Sub-Saharan Africa will outnumber the US and Europe combined - The global economy will be driven by the non-Western consumer for the first time in modern history - There will be more global wealth owned by women than men - There will be more robots than workers - There will be more computers than human brains - There will be more currencies than countries All these trends, currently underway, will converge in the year 2030 and change everything you know about culture, the economy, and the world. According to Mauro F. Guillen, the only way to truly understand the global transformations underway—and their impacts—is to think laterally. That is, using “peripheral vision,” or approaching problems creatively and from unorthodox points of view. Rather than focusing on a single trend—climate-change or the rise of illiberal regimes, for example—Guillen encourages us to consider the dynamic inter-play between a range of forces that will converge on a single tipping point—2030—that will be, for better or worse, the point of no return. 2030 is both a remarkable guide to the coming changes and an exercise in the power of “lateral thinking,” thereby revolutionizing the way you think about cataclysmic change and its consequences.

Criteria for Selecting the Leading Health Indicators for Healthy People 2030 National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Informing the Selection of Leading Health Indicators for Healthy People 2030, 2020-01-17 Every ten years, the Department of Health and Human Service's Healthy People Initiative develops a new set of science-based, national objectives with the goal of improving the health of all Americans. Defining balanced and comprehensive criteria for healthy people enables the public, programs, and policymakers to gauge our progress and reevaluate efforts towards a healthier society. Criteria for Selecting the Leading Health Indicators for Healthy People 2030 makes recommendations for the development of Leading Health Indicators for the initiative's Healthy People 2030 framework. The authoring committee's assessments inform their recommendations for the Healthy People Federal Interagency Workgroup in their endeavor to develop the latest Leading Health Indicators. The finalized Leading Health Indicators will establish the criteria for healthy Americans and help update policies that will guide decision-making throughout the next decade. This report also reviews and reflects upon current and past Healthy People materials to identify gaps and new objectives.

Decision 2030 Michael Stein, 2011-07-22 Recent news of a California city to outlaw circumcision, and anti-Semitic and anti-Zionistic activities at many U.S. Universities has already caused many Jews to recoil in horror. Bothered by this, history teacher and author Michael Stein decides to write a compelling fiction, *Decision 2030*, about the Jews' decision to fight or leave. This book is a fictional account of a Jewish community, Grayvelt, that is suffering from physical and political attacks on a massive scale in the years prior to 2030. Because of the damage done to the Jewish quality of life, the community responds in two different directions. One choice is to remain in the U.S. and fight with the help of competent civilian soldiers; another choice is to move to the northern part of Israel into a new community. The three major emerging Jewish heroes are Earle Smith, Gloria Resnick, and Rabbi Moshe Weinhauser. The Jews are helped by four non-Jewish couples known as the Fearsome Foursome. The four couples show the Jews how to fight back. The growing admiration between the Jewish community and the fearsome Foursome results in the winning strategy to minimize the terrible effects of the anti-Semitic Edgar Brown Society. *Decision 2030* contains the different points of view to remain or leave the U.S. for Israel. It has a great deal of adventure dealing with fire bombings, car and truck chases, midnight attacks, and military attacks. It also has nearly a dozen examples of alliteration which came forth in the natural flow of the author's pen. The novel also contains an original prayer and an alliterative poem.

Conflict Prevention in the UN's Agenda 2030 Bertrand Ramcharan, Robin Ramcharan, 2020-01-27 This book analyses the UN's Agenda 2030 and reveals that progress is lagging on all five interlocking and interdependent themes that are discussed: conflict prevention, development, peace, justice and human rights. Many voices have already been raised, including that of the UN Secretary-General that the Sustainable Development Goals will not be met by 2030 unless there is a re-doubling of efforts. Still, on development as such, there is much striving. The book puts the concept of preventive diplomacy into all of the issues of modern international relations, from the US/China confrontation to the various conflicts bedeviling Africa. It bridges the two worlds of the international relations specialist on the one hand and that of the academic interested in UN affairs on the other hand. There is normally little contact between those two specializations. The authors have taken several current issues to show how the millennium debates and the SDG targets are relevant to realist school conflicts, and that there is work under way to operationalize ideas and theories in this respect. This is the first ever discussion of the conflict prevention dimension in the UN's Agenda 2030 which seeks to advance sustainable development with a view to reinforcing peace and justice on the foundations of respect for universal human rights.

Leadership 2030 Georg Vielmetter, Yvonne Sell, 2014-02-06 The tumultuous changes in the business world during the last decade have forced too many to focus on the short term, rushing to figure out how to produce quarterly profits in chaotic conditions. As a result, the longer view is often obscured, leaving businesses so busy fighting today's battles that they are completely unprepared for tomorrow's war. The next cataclysmic wave is surging relentlessly ahead, demanding leaders who can steer their companies through complexity and change. In Leadership 2030, six megatrends are uncovered for the forward-thinking leader that will dramatically impact organizations' markets, cultures, systems, and processes: 1. Globalization 2.0: Asia dominates the global economy. 2. Climate change: Sustainability becomes imperative. 3. Individualism: Freedom of choice erodes loyalty. 4. Digitization: Boundaries blur between private and working lives. 5. Demographic changes: Aging populations intensify the talent war. 6. Converging technologies: The sharpest tech shift in history is around the corner. Research findings and case studies, drawn from original research conducted jointly with foresight company Z-Punkt and further analyzed by Hay Group, provide compelling evidence of each megatrend and highlight the skills, capabilities, and attitudes leaders must cultivate in order to maneuver through it all. Tomorrow's changes are coming. With Leadership 2030, you can prepare for them today!

2030 - The Future of Medicine Richard Barker, Dr. Richard Barker, 2011 Over the last couple of years, the credit crunch has driven a near-collapse of the world's financial systems. With the benefit of hindsight, many say this could have been predicted and avoided. Over the next 10-20 years, healthcare is headed for its own meltdown: an inability to fund the growth in demand and the appearance of costly new medical technology within the current healthcare systems framework. This 'meltdown' will not be as sudden as that in the world of finance: it will occur over the next 20 years, but the failure of the current sources of healthcare funding to meet our expectations of care quantity and quality will have consequences every bit as serious as the banking crisis. The warning signs are there, the crisis is already being predicted - but is it inevitable, or can it be avoided? This book offers a penetrating analysis of the underlying problems, and offers some simple, but far-reaching solutions to bring supply and demand back into balance and avoid the meltdown. It is not a contribution to the current political debate but a primer for the changes to the underlying fabric of healthcare if reforms such as Obamacare have any chance of sustainable success. In the course of the book, we confront many topical challenges: How can people be persuaded to manage their own health better?; Can we afford to spend more of today's money on disease prevention and detection, to save future costs?; Will 'personalised medicine' be cheaper, or more expensive?; Are healthcare IT systems a key part of the solution or doomed to be expensive white elephants?; and most importantly: What will the future of healthcare look like, for us and for our children and grandchildren? To bring the answers to this final question alive, the book uses a fictitious family, the Carters, to illustrate the changes we will see, the dilemmas we will face and the solutions we must strive for. Interspersed between the text are the vignettes of members of the family, their diseases and treatments and how change has affected each of their lives.

2030 Albert Brooks, 2011-05-10 Is this what's in store? June 12, 2030 started out like any other day in memory—and by then, memories were long. Since cancer had been cured fifteen years before, America's population was aging rapidly. That sounds like good news, but consider this: millions of baby boomers, with a big natural predator picked off, were sucking dry benefits and resources that were never meant to hold them into their eighties and beyond. Young people around the country simmered with resentment toward the olds and anger at the treadmill they could never get off of just to maintain their parents' entitlement programs. But on that June 12th, everything changed: a massive earthquake devastated Los Angeles, and the government, always teetering on the edge of bankruptcy, was unable to respond. The fallout from the earthquake sets in motion a sweeping novel of ideas that pits national hope for the future against assurances from the past and is peopled by a memorable cast of refugees and billionaires, presidents and

revolutionaries, all struggling to find their way. In 2030, Albert Brooks' all-too-believable, dystopian imagining of where today's challenges could lead us tomorrow makes gripping and thought-provoking reading.

Joe Public 2030 Chris Bevolo,2022-02-15 On the ten-year anniversary of the release of the original Joe Public Doesn't Care About Your Hospital book, author Chris Bevolo and Revive have set their sights a decade in the future with Joe Public 2030: Five Potent Predictions Reshaping How Consumers Engage Healthcare. The book explores five key ways consumer health engagement may change over the coming decade, covering everything from AI and personal monitoring to consumerism, new competition, the politicization of healthcare, and growing health disparities. The book makes five bold predictions about that future, which range from exciting and promising to ominous and discouraging. Based on insights developed by a team of researchers, strategists, and futurists at Revive, the five core predictions are supported by more than 250 resource citations and input from 22 industry experts who were interviewed for the book, including health system CEOs, venture capitalists, entrepreneurs, and physicians. The purpose of the book is to spark conversation about how the future of health and healthcare in the U.S. might emerge, and how individuals and organizations might want to prepare for – or even change - that future. This is Bevolo's seventh book, and the fourth (and final) installment in the Joe Public series. The book is scheduled for release in January 2022.

Mexico and the 2030 Sustainable Development Agenda Rebecka Villanueva Ulfgard,2023-12-19 This book explores how and why Mexico's approach to the 2030 Agenda for Sustainable Development and Sustainable Development Goals (SDG) implementation with the López Obrador administration is unsustainable and non-transformative, overshadowed by his vision of Mexico's "Fourth Transformation". Approached as a super mantra revolving around "Republican Austerity" and "First, the poor", it provides original analysis of structural and conjunctural challenges facing Mexico as regards People-, Planet-, and Peace-centered development. The book reveals the promise "First, the poor" is inconsistent with data on Mexico's poverty reduction (SDG1). Despite record-high spending on social programs and unmatched coverage, the recent tendency of improvement in tackling poverty is rather ambiguous from the perspective of multidimensional poverty. The book covers access to clean energy (SDG7), resilient infrastructure and sustainable industrialization (SDG9), and safeguarding biodiversity (SDG15) by examining three megaproject case studies: the oil refinery Dos Bocas, the Interoceanic Corridor of the Isthmus of Tehuantepec, and the Maya Train, generating concern with the economic, environmental, and social dimensions of sustainable development. The prospects for an 'enabling environment' for SDG implementation are hampered by persistently high levels of homicides and impunity (SDG16). Turning Mexico's Armed Forces into 'first development partner of choice' is problematized as regards their reach in infrastructure megaprojects and social welfare programs, in the overall context of the 'de-risking state' favoring private capital. The result, as determined by Villanueva Ulfgard, has led Mexico further astray from sustainable and transformative development.

A New Era in Global Health William Rosa, MS, RN, AGPCNP-BC, ACHPN, FCCM, Caritas Coach,2017-06-26 Explores the great potential for nursing involvement in promoting global health. This unique text elucidates the relationship between global nursing and global health, underscoring the significance of nurses' contributions in furthering the Post-2015 Agenda of the United Nations regarding global health infrastructures, and examining myriad opportunities for nurses to promote the 17 Sustainable Development Goals (SDGs) and foster health and healthy environments worldwide. While past nursing literature has emphasized nursing's potential involvement and influence in the global arena, this is the first book to identify, validate, and promote nurses' proactive and multidimensional work in furthering current transnational goals for advancing health on a global scale. The book includes an introduction to global health, clarification of terms and roles, perspectives on education, research, and theory related to global nursing, a history of the partnership between the United Nations and the nursing profession, an in-depth exploration of the 17 SDGs and relevant nursing tasks, as well as several chapters on creating a vision for 2030 and beyond. 2030 Rutger van Santen,Djan Khoe,Bram Vermeer,2010-09-16 Imagine living in 1958, and knowing that the integrated circuit--the microchip--was about to be invented, and would revolutionize the world. Or imagine 1992, when the Internet was about to transform virtually every aspect of our lives. Incredibly, this book argues that we stand at such a moment right now--and not just in one field, but in many. In 2030, authors Rutger van Santen, Djan Khoe, and Bram Vermeer interview over two dozen scientific and technological experts on themes of health, sustainability and communication, asking them to look forward to the year 2030 and comment on the kind of research that will play a necessary role. If we know what technology will be imperative in 2030, the authors reason, what can we do now to influence future breakthroughs? Despite working in dissimilar fields, the experts called upon in the book - including Hans Blix (Head of the UN investigation in Iraq), Craig Venter (explorer of the human DNA), and Susan Greenfield (a leading world authority on the human brain), among many others - all emphasize the interconnectedness of our global networks in technology and communication, so tightly knit that the world's major conflicts are never isolated incidents. A fresh understanding of the regularities underlying these complex systems is more important than ever. Using bright, accessible language to discuss topics of universal interest and relevance, 2030 takes the position that we can, in fact, influence the course of history. It offers a new way of looking forward, a fresh perspective on sustainability, stability and crisis-prevention. For anyone interested in modern science, this book will showcase the technologies that will soon change the way we live.
