StarBriefs 2001 ,2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on. Yet nobody would wonder at someone taking a short walk every day - after twenty five years that person would have covered a surprisingly long distance. This is exactly the story behind this list, which appeared first as a few pages within the directory StarGuides (or whatever name it had at that time) and as a distinct sister publication since 1990. The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations, acronyms, contractions and symbols which they might encounter in all aspects of the vast range of their professional activities, including traveling. Perhaps it is a bit paradoxical, but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline, they will probably encounter more difficulties when dealing with adjacent fields. It is for this purpose that this dictionary might be most often used. Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions.

StarBriefs Plus Andre Heck,2004-04-30 With about 200,000 entries, StarBriefs Plus represents the most comprehensive and accurately validated collection of abbreviations, acronyms, contractions and symbols within astronomy, related space sciences and other related fields. As such, this invaluable reference source (and its companion volume, StarGuides Plus) should be on the reference shelf of every library, organization or individual with any interest in these areas.

Besides astronomy and associated space sciences, related fields such as aeronautics, aeronomy, astronautics, atmospheric sciences, chemistry, communications, computer sciences, data processing, education, electronics, engineering, energetics, environment, geodesy, geophysics, information handling, management, mathematics, meteorology, optics, physics, remote sensing, and so on, are also covered when justified. Terms in common use and/or of general interest have also been included where appropriate.

THE MIND FACTORY Larry Odell Johnson,2021-06-29 The author has written a book combining elements of sociology, religion, philosophy, and mathematics, in a demonstration of how the sub-disciplines are connected through the lexicon of language. His purpose has been to present in everyday terms an exposition for understanding specific aspects of some of the most insulated areas of formal knowledge. The author's theoretical approach is deliberately atypical. This self-labeled 'scrambled eggs' approach argues the author is done for the purpose of bringing deeply hidden meanings immediately to the surface, in deference to the most efficient use of the reader's valuable time. The author believes learners should not be obligated to spend years puzzling through abstruse language in an effort to gain insight into important information, especially when the information can be brought within the range of their understanding within a matter of hours. He does not compare his book with others ostensibly of the same type but, rather, he says that while his book is not unique, it is unusual. That is, his book will give its diligent and discerning reader insight and perspectives that will enable him/her to understand the most esoteric contents of almost any other book they will ever read.
