Atlas of Satellite Observations Related to Global Change Robert J. Gurney, James L. Foster, Claire L. Parkinson, 1993-11-25 Global environmental change is one of the most pressing international issues of the next century. There is a need to monitor the Earth's vital signs, from atmospheric ozone to tropical deforestation to sea level change. Models used to predict global changes have not yet fully used global observational data sets. Satellite data sets will be vital in addressing global change issues, in determining natural variability and monitoring global and regional changes. This timely volume provides an illustration of the variety of satellite-derived global data sets now available, their uses, advantages and limitations, and the range of variation that has already been observed with these data. A team of distinguished contributors provide a highly illustrated and accessible account suitable for the general scientific reader.

Atlas of the Galilean Satellites Paul Schenk, 2010-08-05 Complete color global maps and high-resolution mosaics of Jupiter's four large moons - Io, Europa, Ganymede and Callisto - are compiled for the first time in this important atlas. The satellites are revealed as four visually striking and geologically diverse planetary bodies: Io's volcanic lavas and plumes and towering mountains; Europa's fissured ice surface; the craters, fractures and polar caps of Ganymede; and the giant impact basins, desiccated plains and icy pinnacles of Callisto. Featuring images taken from the recent Galileo mission, this atlas is a comprehensive mapping reference guide for researchers. It contains 65 global and regional maps, nearly 250 high-resolution mosaics, and images taken at resolutions from 500 meters to as high as 6 meters.

The Atlas of Mars Kenneth S. Coles, Kenneth L. Tanaka, Philip R. Christensen, 2019-08-22

Planetary scientist and educator Ken Coles has teamed up with Ken Tanaka from the United States Geological Survey's Astrogeology team, and Phil Christensen, Principal Investigator of the Mars

Odyssey orbiter's THEMIS science team, to produce this all-purpose reference atlas, The Atlas of Mars. Each of the thirty standard charts includes: a full-page color topographic map at 1:10,000,000 scale, a THEMIS daytime infrared map at the same scale with features labeled, a simplified geologic map of the corresponding area, and a section describing prominent features of interest. The Atlas is rounded out with extensive material on Mars' global characteristics, regional geography and geology, a glossary of terms, and an indexed gazetteer of up-to-date Martian feature names and nomenclature. This is an essential guide for a broad readership of academics, students, amateur astronomers, and space enthusiasts, replacing the NASA atlas from the 1970s.

Atlas of Venus Peter John Cattermole,Patrick Moore,1997-05-28 Venus, closest planet to the Earth, is a torrid world of extremes shrouded from direct view by dense clouds. This Atlas of Venus shows all the fascinating detail discovered on the recent Magellan mission to map the planet surface. Giving the historical background to our perception of the planet, this book clearly explains why Venus has been the goal of so many missions by both Russian and American space programmes. With the latest images from the Magellan mission, this colourful Atlas shows the beautiful landscape of Venus and its dynamic volcanism. Over 100 maps and illustrations show the dramatic beauty of this photogenic planet. Complete with detailed maps of the planet and a gazetteer of all landmarks, this is the essential reference source for all professional and amateur astronomers, and planetary scientists interested in our closest neighbour.

Atlas of Deformational and Metamorphic Rock Fabrics G. J. Borradaile,M. B. Bayly,C. McA. Powell,2012-12-06 In May 1976 Lucian B. Platt organized a highly successful Penrose Conference on The Formation of Rock Cleavage at Bryn Mawr College in Pennsylvania, U. S. A. The meeting drew together about 70 specialists from both sides of the Atlantic and from Australasia, who contributed discussions on various aspects of rock cleavage and its formation. Even early in the meeting it became clear to the participants that they lacked a common terminology, that often the same technical word implied different things to different people and that observables and descriptors were loosely defined. In an attempt to improve communication the present editors contacted about 190 workers after the conference with a view to compiling a set of photographs with captions to illustrate exactly what workers were talking about. As a result the compilation was published as a limited edition by an inexpensive offset process at the University of Tasmania. The success of that provisional edition of the Atlas of Rock Cleavage and the responses of the readers prompted us to make a more extensive collection of material, contact a wider range of workers and, with the support of Dr. Konrad Springer, to publish the present higher-quality reproduction of the contributors' plates.

The Compact NASA Atlas of the Solar System Ronald Greeley,Raymond Batson,2001-11-29 The exploration of our solar system by spacecraft has been one of the greatest scientific achievements of the twentieth century. The mapping of other worlds has resulted from numerous space missions by NASA, extending over many years. The data from these planetary missions have been synthesised by the US Geological Survey to produce detailed maps. Every planet, moon, or small body investigated in NASA missions is discussed and where appropriate mapped. Geological maps, reference maps, shaded relief maps, synthetic aperture radar mosaics and colour photomosaics marvellously present the features of planets and their satellites. This is truly a 'road map' of our solar system. All maps are fully indexed. The gazetteer lists the names of all features officially approved by the International Astronomical Union. The Compact NASA Atlas of the Solar System is the definitive reference atlas for planetary science.

Encyclopedic Atlas of Terrestrial Impact Craters Enrico Flamini,Mario Di Martino,Alessandro Coletta,2019-06-25 This comprehensive atlas explains the genesis and evolution of impact known craters on Earth, presenting a wealth of radar images from the Italian COSMO-SkyMed satellites that were acquired at the same frequency, spatial resolution, operating mode, and illumination, allowing excellent comparison of different impact structures. It also discusses in detail the processes that have hidden or erased terrestrial impact craters, and clearly explains the basic

principles of remote sensing and the COSMO-SkyMed system and radar instruments. Also, the optical satellite remote sensing technique used to produce the optical images is described. The main section documents each of the exposed craters officially recognized as caused by meteoritic impact, presenting a table with the COSMO-SkyMed radar image and, where available, a Sentinel optical image and a photograph taken in situ. A short accompanying text reports the location, context, geographical coordinates, and other ancillary information to support future researches.
