Forensic Human Factors and Ergonomics Michael S. Wogalter,2018-09-03 This book has 18 case study chapters investigating various injury scenarios through the use of a Human Factors and Ergonomics (HFE) analysis. Each injury scenario derives from one or more similar lawsuits (but names, places and some of the details are fictionalized). The scenarios describe a 'slice of life' of people interacting with products, equipment, tasks, and environments before they are seriously hurt. The forensic analysis that follows each scenario gives a background of prior similar events and systematically examines potential causes leading to the injury event. There is emphasis on the person-machine interface, human error, hazard analysis, hazard control and a model of communication-human information processing (C-HIP). Chapters

are authored by highly experienced expert witnesses in HFE. The methods used are general techniques that can be applied to other injury scenarios, but would be better if employed earlier in a product's life cycle to prevent or limit injury. The first three chapters introduce concepts useful for the analyses in the case study chapters. The last chapter offers some broad take-away points that cut across several of the case studies. Features contributions by persons who have extensive experience in HFE and who have served professionally in the role of an expert witness in various legal cases mostly in product liability Gives a broad range of situations to illustrate where HFE considerations could improve product or environmental safety. There is an emphasis on children/caregivers, and adult activities such as driving Uses mitigation strategies to reduce the likelihood of occurrence and severity of adverse events Includes a first-person scenario at the beginning of each chapter Allows the lessons learned to be adaptable to other domains where people interact with products and environments

Short-Wave Solar Radiation in the Earth's Atmosphere Irina N.

Melnikova, Alexander V. Vasilyev, 2005-12-05 Based on data from an experiment which ran for ten years, this book summarizes the results of the Atmospheric Physics Department of the St. Petersburg University and the Main Geophysical Observatory. The processed data now forms a rich dataset of spectral values of radiative characteristics under different atmospheric conditions. The analysis of this database clearly shows that the solar radiative absorption in a dusty and cloudy atmosphere is significantly higher than assumed to date. Both graduate students of atmospheric sciences as well as scientists and researchers in the field of meteorology and climatology will find a wealth of new data and information in this monograph.

Disaster Risk Reduction in Agriculture Mukhtar Ahmed,Shakeel

Ahmad,2023-11-02 This book is related to disaster risk reduction in agriculture particularly under changing climate. Climate change refers to significant, long-term changes in the global climate. There is unequivocal evidence that Earth is warming at an unprecedented rate. Human activity is the principal cause. The planets average surface temperature has risen to about 1oC since the late 19th century and most of the warming occurred in the past 40 years. The years 2016 and 2020 are tied for the warmest year on the record. Similarly, other evidence of rapid climate change includes warming of oceans, shrinking of ice sheets, retreating glaciers, decreasing snow cover, rising of sea level, declining arctic sea ice, increased frequency of extreme events, ocean acidification and loss of biodiversity. Hence, climate change impacts, both extreme weather and slow-onset events, have impacted several sectors of the national economies and activities, in particular agriculture and food production, augmented by other challenges be it geopolitical, cost of finance or supply chain related, and in a time of increased food insecurity. Without CO2 fertilization, effective adaptation, and genetic improvement, each degree-Celsius increase in global mean temperature would, on average, reduce global yields of wheat by 6.0%, rice by 3.2%, maize by 7.4%, and soybean by 3.1%. Hence this book is useful as a study material to teach in the field of agriculture and climate change. The book is useful for instructors and postgraduate as well as undergraduate students involved in the study of climate change. The book also provide guidance to multiple stakeholders to design mitigation and adaptation efforts to climate change and ensure food security in the developing world.
