On Becoming Baby Wise Gary Ezzo,Robert Bucknam,2006 The infant management concepts presented in this book have found favor with over two million parents and twice as many contented babies. On Becoming Babywise brings hope to the tired and bewildered parents looking for an alternative to sleepless nights and fussy babies. The Babywise Parent Directed Feeding concept has enough structure to bring security and order to your baby's world, yet enough flexibility to give mom freedom to respond to any need at any time. It teaches parents how to lovingly guide their baby's day rather than be guided or enslaved to the infant's unknown needs. The information contained within On Becoming Babywise is loaded with success. Comprehensive breast-feeding follow-up surveys spanning three countries, of mothers using the PDF method verify that as a result of the PDF concepts, 88% breast-feed, compared to the national average of only 54% (from the National Center for Health Statistics). Of these breast-feeding mothers, 80% of them breast-feed exclusively without a formula complement. And while 70% of our mothers are still breast-feeding after six months, the national average encourage to follow demand feeding without any guidelines is only 20%. The mean average time of breast-feeding for PDF moms is 33 1/2 weeks, well above the national average. Over 50% of PDF mothers extend their breast-feeding toward and well into the first year. Added to these statistics is another critical factor. The average breast-fed PDF baby sleeps continuously through night seven to eight hours between weeks seven and nine. Healthy sleep in infants is analogous to healthy growth and development. Find out for yourself why a world of parents and pediatricians utilize the concepts found in On Becoming Babywise.

Mothers and Medicine Rima D. Apple, 1987-12-16 In the nineteenth century, infants were commonly breast-fed; by the middle of the twentieth century, women typically bottle-fed their babies on the advice of their doctors. In this book, Rima D. Apple discloses and analyzes the complex interactions of science, medicine, economics, and culture that underlie this dramatic shift in infant-care practices and women's lives. As infant feeding became the keystone of the emerging specialty of pediatrics in the twentieth century, the manufacture of infant food became a lucrative industry. More and more mothers reported difficulty in nursing their babies. While physicians were establishing themselves and the scientific experts and the infant-food industry was hawking the scientific bases of their products, women embraced "scientific motherhood," believing that science could shape child care practices. The commercialization and medicalization of infant care established an environment that made bottle feeding not only less feared by many mothers, but indeed "natural" and "necessary." Focusing on the history of infant feeding, this book clarifies the major elements involved in the complex and sometimes contradictory interaction between women and the medical profession, revealing much about the changing roles of mothers and physicians in American society. "The strength of Apple's book is her ability to indicate how the mutual interests of mothers, doctors, and manufacturers led to the transformation of infant feeding. . . . Historians of science will be impressed with the way she probes the connections between the medical profession and the manufacturers and with her ability to demonstrate how medical theories were translated

into medical practice.”—Janet Golden, Isis
