Television and the Second Screen James Blake,2016-11-10 Television is changing almost beyond recognition. In the battle for consumers, social media sites, smart phones and tablets have become rivals to traditional linear TV. However, audiences and producers are also embracing mobile platforms to enhance TV viewing itself. This book examines the emerging phenomenon of the second screen: where users are increasingly engaging with content on two screens concurrently. The practice is transforming television into an interactive, participatory and social experience. James Blake examines interactive television from three crucial angles: audience motivation and agency, advances in TV production and the monetisation of second screen content. He also tracks its evolution by bringing together interviews with more than 25 television industry professionals - across the major UK channels - including commissioning editors, digital directors, producers and advertising executives. These reveal the successes and failures of recent experiments and the innovations in second screen projects. As the second screen becomes second nature for viewers and producers, the risks and opportunities for the future of television are slowly beginning to emerge. Television and the Second Screen will offer students and scholars of television theory, industry professionals and anyone with an abiding interest in television and technology, an accessible and illuminating guide to this important cultural shift.

Mobile Technologies for Conflict Management Marta Poblet,2011-06-22 Mobile phones are the most ubiquitous communications technology in the world. Besides transforming the way in which we communicate, they can also be used as a powerful tool for conflict prevention and management. This book presents innovative uses of mobile technologies in the areas of early warning, disaster and humanitarian relief, governance, citizens' participation, etc. and cuts across different regions. The book brings together experts and practitioners from different fields—mobile technologies, information systems, computer sciences, online dispute resolution, law, etc.—to reflect on present experiences and to explore new areas for research on conflict management and online dispute resolution (ODR). It also reflects on the transition from present ODR to future mobile Dispute Resolution and discusses key privacy issues. The book is addressed to anyone involved in conflict prevention and dispute

management aiming to learn how mobile technologies can play a disruptive role in the way we deal with conflict.

Recycling Culture(s) Sara Martín, 2009-03-26 Culture survives today by means of a constant recycling, optimistically trying to overcome its own decadence in the 21st century. Recycling Culture(s) addresses from a variety of perspectives this strategy, analyzing not only a wide range of texts but also of cultural practices. As the volume shows, culture thrives on a permanent state of flux, borrowing materials for its own survival wherever they are found and always favouring hybridity. This refers not only to how texts cross genre and medium boundaries but also to how identities and the very idea of culture grow out of recycling what is at hand both synchronically and diachronically. Divided in two sections, 'Part I: Recycling the Book and the Screen' and 'Part II: Recycling Identity, Consumption and History,' the twenty essays offered here are the work of an international group of scholars dealing with different linguistic and geographical environments. A primary aim of the volume is breaking away with the compartmentalisation of Cultural Studies into non-communicating linguistic domains to offer an eclectic, engaging mixture of approaches. This is the twelfth monographic volume of the series Culture & Power edited by members of the permanent seminar on Cultural Studies 'Culture & Power,' which has organised an international yearly conference since 1995. Recycling Culture(s)/ is the latest in the series of Culture and Power books to come out of Spain. It features essays not only from many of the most distinguished cultural studies scholars on the Iberian Peninsular but many from beyond its borders. What makes this volume so stimulating, relevant and exiting is that the contributors range across an impressive assortment of contexts of (and for) recycling. The book's thematic base is impressive taking in, as it does, the relevance of recycling history, identity and a multitude of popular texts (written and audio-visual). All contributions are theoretically informed and the authors consider subjects from comic-book heroes, James Bond and /Clockwork Orange/ to African-Caribbean women, Australian national myth and mobile phones. The contributors and editor should be congratulated on producing a theoretically coherent, challenging and important intervention into contemporary cultural studies. Dr David Walton, Senior Lecturer in Cultural Studies at the University of Murcia, Spain, author *Introducing Cultural Studies: Learning Through Practice* /(Sage, 2008)

Electronic and Mobile Commerce Law Charles Wild, Stuart Weinstein, Neil Macewan, 2011-04-01 The rapid, commercially-driven evolution of the Internet has raised concomitant legal concerns that have required responses from both national and international law. This unique text offers a complete analysis of electronic and mobile commerce, exploring the law relating to online contracts and payment systems, electronic marketing, and various forms of cybercrime as well as the regulation of electronic communications networks and services. Written by specialists, this account also provides insights into emerging areas such as internet libel, online gambling, virtual property, cloud computing, smart cards, electronic cash, and the growing use of mobile phones to perform tasks previously carried out by computers.

Climate Change Adaptation in Pacific Countries Walter Leal Filho, 2017-02-07 This book showcases vital lessons learned from research, field projects and best practice examples with regard to climate change adaptation in

countries throughout the Pacific region, a part of the planet that is particularly vulnerable to and affected by climate change. The book's primary goals are to document the wealth of experiences in the region available today, to encourage cross-sector interactions among the various stakeholders in the region, and to help transfer results to other countries and regions. Accordingly, it gathers a set of papers presented at a symposium on climate change adaptation held in Fiji in July 2016, focusing on Fostering Resilience and Improving the Quality of Life. In these contributions, local and international experts present a variety of initiatives showing how Pacific countries are coping with the many problems associated with climate change, including initiatives in education and awareness work taking place across the region, operational aspects and their implications for policy-making, and challenges in urban and rural areas.

Live Television Stephanie Marriott, 2007-11-18 The study of television, still the most powerful of modern media, has long been fascinated by its capacity for 'liveness'. Marriott offers an insightful analysis of the complexities of this phenomenon, particularly its increasingly vital connection with the use of new media. A timely contribution to our understanding of media events, 24 hour news and the phenomenology of mediated experience. - Andrew Tolson, De Montfort University In the steps of Marshall McLuhan and Alfred Schutz, Stephanie Marriott offers us a timely and sustained reflection upon the nature of mediation and the changing qualities of the live experience made possible by television. Elegant, lucid, witty and thought-provoking, her account will become a canonical text in television studies. - Martin Montgomery, University of Strathclyde In a fragmenting multichannel and multiplatform global broadcasting environment live television continues to attract huge audiences, bucking the trend towards narrowcasting and niche markets, yet little of a comprehensive nature has been written about the live television event. In this fascinating book, Stephanie Marriott engages in a close and detailed analysis of the nature of live television. She examines the transformations in our experience of time and space which are brought about by the capacity of broadcasting to bring us the world in the moment in which it is unfolding, situating the live television event in the context of an expanding and increasingly complex global communicative framework. Building her argument by means of a series of case studies of events as diverse as the assassination of President Kennedy in 1963, the attack on the World Trade Centre in 2001, the 2005 London bombings, election night coverage and live sports coverage, Marriott provides a meticulous and articulate account of the way in which live television mediates the event for its audience. This book will be essential reading for students and academics working in media, cultural studies, cultural sociology, and linguistics, and is an exciting new contribution to the field of broadcast talk and media discourse.

Innovations of China's Mainstream Media Convergence Peng Duan,2022-03-11 This book offers fresh critical insights to the field of media convergence with a particular focus on the mainstream media of China. It begins with an exploration of the emerging change among the entire mediascape: the clear and distinct boundaries that used to demarcate media channels are gradually dissolved, and the widespread introduction and application of new communication technologies have brought both challenges and opportunities toward China. This is followed by a series of theoretical endeavor about the link between conventional media and new media. Drawing on President Xi Jinping's guiding opinions regarding with media convergence, this book then analyzes the political task laid upon mainstream media in which challenges may be turned into opportunities. Given its conceptual focus and practical contribution, the book helps media professionals and related government agencies understand the wide variety of changes brought about by media convergence and the new direction for media development.

FCO performance and finances Great Britain: Parliament: House of Commons: Foreign Affairs Committee,2011-02-11 This report focusses on the FCO's financial situation and the implications of the Spending Review 2010 for its work and performance, and that of its associated body, the British Council. The FCO is one of the major departmental 'losers' in the Spending Review. Reductions in spending on the FCO, if they result in shortfalls in skilled personnel and technical support in key countries and regions, can have a serious effect in terms of the UK's relations with foreign countries, out of all proportion to the amounts of money involved, especially in relation to the UK's security and that of its Overseas Territories. Cuts to the core FCO budget of even 10% may have a damaging effect on the Department's ability to promote UK interests overseas. The FCO will also face cuts of 55% to its capital budget. The target of raising £50 million per year through selling existing buildings may be difficult to achieve, and may not secure savings in the long-term. A further reduction in the opportunities for more junior UK-based staff to serve in overseas posts, and a consequent diminishing of experience and morale among FCO employees, could over time have a damaging effect on the quality of British diplomacy and the effectiveness of the FCO. The British Council, facing a 25% cut in spending, should give detailed information on its strategy for implementing the cut, which may well trigger fundamental rethinking of the role and work of the Council.

Mobile Communications Nicola Green,Leslie Haddon,2009-12-15 The cellphone has achieved a global presence faster than any other form of information and communication technology. A global multi-billion dollar industry, this small, mundane device is now an intrinsic part of our everyday life. This communications medium has had an immense social and cultural impact and continues to evolve. Talking, texting, photographing, videoing, connecting to a network of other media – the cellphone now seems essential. But, beyond the ways in which it has actively restructured our daily lives, the cellphone has changed our sense of ourselves and the way we see the world. The

relationship between public and private space, how we view time and space, how we rely on and negotiate social networks – all are increasingly centred on this small piece of technology. Mobile Communications presents a succinct, challenging, and accessible overview of the transformations and challenges presented by this most personal, yet most overlooked, technology.

A Monster Calls Patrick Ness, Siobhan Dowd, 2013-08-27 NOW A #1 NEW YORK TIMES BESTSELLER! An unflinching, darkly funny, and deeply moving story of a boy, his seriously ill mother, and an unexpected monstrous visitor. At seven minutes past midnight, thirteen-year-old Conor wakes to find a monster outside his bedroom window. But it isn't the monster Conor's been expecting-- he's been expecting the one from his nightmare, the nightmare he's had nearly every night since his mother started her treatments. The monster in his backyard is different. It's ancient. And wild. And it wants something from Conor. Something terrible and dangerous. It wants the truth. From the final idea of award-winning author Siobhan Dowd-- whose premature death from cancer prevented her from writing it herself-- Patrick Ness has spun a haunting and darkly funny novel of mischief, loss, and monsters both real and imagined.

Wired Guillermo Beylis, William Maloney, Guillermo Vuletin, Jorge Andres Zambrano Riveros, 2023-10-04 Latin America and the Caribbean continues to face adverse global headwinds: high interest rates, modest G-7 growth, soft commodity prices and uncertain prospects in China will all depress growth. Well-grounded policy responses have led to largely recovering employment and income losses from the pandemic and falling rates of inflation. However, the region faces the mutually reinforcing triple challenges of low growth, limited fiscal space, and citizen dissatisfaction. Expanding digital connectivity offers a possibility to make progress on all three fronts. To maximize the social benefits of connectivity as well as to ensure that it does not exacerbate spatial, educational, gender or racial inequalities, three challenges are important to address: first, expanding coverage to the remaining unconnected areas as well as improving the quality of service; second, increasing the productive use of existing infrastructure, and; third, as with any other infrastructure hardware, investments in software - such as digital and traditional skills, managerial capabilities, supportive regulatory frameworks, and deeper financial markets are critical.

The Mobile Audience Martin Rieser, 2011 The convergence of mobile technologies and ubiquitous computing is creating a world where information-rich environments may be mapped directly onto urban topologies. This book tracks the history and genesis of locative and wearable media and the ground-breaking work of pioneer artists in the field. It examines changing concepts of space and place for a wide range of traditional disciplines ranging from Anthropology, Sociology, Fine Art and Architecture to Cultural and Media Studies, Fashion and Graphic design. Mobile and Pervasive media are beginning to proliferate in the landscape of computer mediated interaction in public space through the emergence of smartphone technologies such as the iPhone, cloud computing extended wifi services and the semantic web in cities. These dispersed forms of interaction raise a whole series of questions on the nature of narrative and communication, particularly in relation to an audience's new modes of mobile participation and reception. These issues are explored through a series of focused essays by leading theorists, seminal case studies and practitioner interviews with artists at the cutting edge of these technologies, who are extending the potential of the medium to enhance and critique technological culture. By emphasizing the role of the audience in this nomadic environment, the collection traces the history and development of 'ambulant' artistic practice in this new domain, creating an essential handbook for those wishing to understand the dominant global technology of the 21st Century and its implications for Art, Culture and Audience.
