**Dava Sobel**

*The Planets* Dava Sobel, 2006-10-31 Dava Sobel's *The Glass Universe* will be available from Viking in December 2016 With her bestsellers *Longitude* and *Galileo's Daughter*, Dava Sobel introduced readers to her rare gift for weaving complex scientific concepts into a compelling narrative. Now Sobel brings her full talents to bear on what is perhaps her most ambitious topic to date-the planets of our solar system. Sobel explores the origins and oddities of the planets through the lens of popular culture, from astrology, mythology, and science fiction to art, music, poetry, biography, and history. Written in her characteristically graceful prose, *The Planets* is a stunningly original celebration of our solar system and offers a distinctive view of our place in the universe. \* A New York Times extended bestseller \* A Featured Alternate of the Book-of-the-Month Club, History Book Club, Scientific American Book Club, and Natural Science Book Club \* Includes 11 full-color illustrations by artist Lynette R. Cook [The Planets] lets us fall in love with the heavens all over again. -The New York Times Book Review Playful . . . lyrical . . . a guided tour so imaginative that we forget we're being educated as we're being entertained. -Newsweek [Sobel] has outdone her extraordinary talent for keeping readers enthralled. . . . *Longitude* and *Galileo's Daughter* were exciting enough, but *The Planets* has a charm of its own . . . A splendid and enticing book. -San Francisco Chronicle A sublime journey. [Sobel's] writing . . . is as bright as the sun and its thinking as star-studded as the cosmos. -The Atlanta Journal-Constitution An incantatory serenade to the Solar System. Grade A- -Entertainment Weekly Like Sobel's [*Longitude* and *Galileo's Daughter*] . . . [The Planets] combines masterful storytelling with clear, engaging explanations of the essential scientific facts. -

*The Planets* Byron Preiss, 1985 Consists of essays by astronomers, speculations by science fiction authors, and illustrations by space artists.

**The Lost Planets** John Wenz, 2019-10-08 A fascinating account of the pioneering astronomer who claimed (erroneously) to have discovered a planet outside the solar system. There are innumerable planets revolving around innumerable stars across our galaxy. Between 2009 and 2018, NASA's Kepler space telescope discovered thousands of them. But exoplanets—planets outside the solar system—appeared in science fiction before they appeared in telescopes. Astronomers in the early decades of the twentieth century spent entire careers searching for planets in other stellar systems. In *The Lost Planets*, John Wenz offers an account of the pioneering astronomer Peter van de Kamp, who was one of the first to claim discovery of exoplanets. Van de Kamp, working at Swarthmore College's observatory, announced in 1963 that he had identified a planet around Barnard's Star, the second-closest star system to the Sun. He cited the deviations in Barnard's star's path—"wobbles" that suggested a large object was lurching around the star. Van de Kamp became something of a celebrity (appearing on a television show with "Mr. Wizard," Don Henry), but subsequent research did not support his claims. Wenz describes van de Kamp's stubborn refusal to accept that he was wrong, discusses the evidence found by other researchers, and explains recent advances in exoplanet detection, including transit, radial velocity, direct imaging, and microlensing. Van de Kamp retired from Swarthmore in 1972, and died in 1995 at 93. In 2009, Swarthmore named its new observatory the Peter van de Kamp Observatory. In the 1990s, astronomers discovered and confirmed the first planet

outside our solar system. In 2018, an exoplanet was detected around Barnard's Star—not, however, the one van de Kamp thought he had discovered in 1963.

*A Planet Is a Poem* Amanda West Lewis, 2024-05-07 An out-of-this-world poetic exploration of the wonders of our solar system. From a ballad of Earth and an ode to the sun to a villanelle for Venus and a sestina for Saturn, here are 14 original poems about planets and other bodies in our solar system. Each different poetic form reflects the object's unique characteristics, and each poem is bursting with intriguing details sure to capture readers' imaginations. Information about both the object and the poetic form accompanies each poem. This innovative, immersive and beautifully crafted book blends science and poetry to create something strikingly new. Readers will be enchanted.

*What's Hidden Inside Planets?* Sabine Stanley, 2023-11-14 A guided journey through the inner workings of Earth, the cloaked mysteries of other planets in our solar system, and

beyond. Extreme heat. Extreme cold. Extreme pressure. Toxic gases. Scorching magma flows, and ice volcanoes. Interior tides. Asteroids filled with gold. In *What's Hidden Inside Planets?* planetary scientist Dr. Sabine Stanley cracks the surface to reveal the beating heart of planets and what created them—from the building blocks of swirling cosmic dust, pebbles, and gas to coalesced planetesimal beginnings to the worlds we see today. We're only beginning to explore the secretive interiors of planets, where awe-inspiring wonders await. Our home planet is no exception. Earth, from space, looks like a shimmering gem suspended in an inky, infinite expanse. But this serene image masks the magnificent and volatile interior forces that make life possible for millions of species on the surface. The placid appearances of our neighboring planets similarly belie their powers—and science fiction-worthy features, like diamond rain. The daily machinations of Earth's deep interior make the planet a habitable, yet sometimes treacherous, place to live. Drill down thousands of miles through our built environments and soil, sand, water, rock, and minerals to the outer (mainly liquid iron with nickel) and inner core, encountering intense convection, roiling metals, hidden continents, and shifting tectonic plates. Discover the effects of magnetism, rotation, and seismic activity seen and sensed in the forms of auroras, hurricanes, volcanoes, and earthquakes, among other manifestations. Our neighboring planets boast their own fierce forces, along with moons covered by frozen oceans that might someday reveal extraterrestrial life. Join this exciting journey to far-flung interstellar locations and the center of the Earth to learn what lies beneath our feet, and why it's the best real estate in our solar system.

**Exploring the Planets** Fred Taylor, 2016-02-26 The planets fascinate us, and naturally we care about our own Earth, and things like how well we can forecast the weather and whether climate is really changing. Exploring the Planets offers a personal account on how the space programme evolved. It begins in the era of the first blurry views of our Earth as seen from space, and ends with current plans for sophisticated robots on places as near as our neighbours Venus and Mars and as far away as the rainy lakelands of Saturn's planet-sized moon Titan. Examining the scientific goals of these complex voyages of discovery, and the joys and hardships of working to achieve them. The Space Age is now about 50 years old and for those lucky enough to be part of it at its inception, it's filled a worklong lifetime. Today, several satellites around the Earth have studied the atmosphere and the climate using instruments on board that the author helped design and build. 'Deep space' missions were embarked upon to visit the planets: all of the major bodies (six planets, the Moon and minor bodies, asteroids and comets) of the classical Solar System have been scrutinised close-up by experiments built in various laboratories worldwide. Most of the narrative is based on the author's experiences at the world's space agencies, research labs, and conferences, and at other places as diverse as Cape Canaveral and No. 10 Downing Street.

*Welcome to Mars* Buzz Aldrin, Marianne J. Dyson, 2015 The Apollo 11 astronaut invites young people to evaluate Mars as a potential planet for human colonization, and describes what Mars residents might experience while traveling to and living on the Red Planet.

**Tenth Planet** Henry Seltzer, 2015-08-01 It's not often that a professional is on the cutting edge of his field but Henry Seltzer is no stranger to breaking new ground in astrology. In this latest contribution, he graces us with pioneering insights on Eris - a dwarf planet that he proves deserves consideration. The pages are filled with well researched chart examples and analysis supporting his archetypal views on how Eris functions in a horoscope. This book deserves space in your mind and on your shelf; Seltzer's contributions on Eris is a definite enhancement to astrological theory.

The Planet Mappers E. Everett Evans, 2018-01-26 As he heard that dread yet telltale spang against the hull of their spaceboat, young Jon Carver dropped his reelbook and sprang to his feet. His eyes looked swiftly to help his ears trace the sudden hiss he knew was their precious air escaping. In the back of his mind he heard the sudden grunt his father made, the sound of a falling body, his mother's frightened scream, and his brother's What's wrong? But he did not stop his own lanky, gangling body in its leap toward the outer bulkhead. And as he jumped, he pulled his handkerchief from his hip pocket.

Police Your Planet Eric Van Lhin, 2018-01-29 There were ten passengers in the little pressurized cabin of the electric bus that shuttled between the rocket field and Marsport. Ten men, the driver - and Bruce Gordon. He sat apart from the others, as he had kept to himself on the ten-day trip between Earth and Mars, with the yellow stub of his ticket still stuck defiantly in the band of his hat, proclaiming that Earth had paid his passage without

his permission being asked. His big, lean body was slumped slightly in the seat. There was no expression on his face...
