The bombardment is constant, with anti-virus companies update their detection tools constantly to deal with the more than 60,000 new pieces of malware created daily.There are several different companies that build and offer anti-virus software and what each offers can vary but all perform some basic functions:* Scan specific files or directories for any malware or known malicious patterns* Allow you to schedule scans to automatically run for you* Allow you to initiate a scan of a specific file or of your computer, or of a CD or flash drive at any time.* Remove any malicious code detected -sometimes you will be notified of an infection and asked if you want to clean the file, other programs will automatically do this behind the scenes.* Show you the 'health' of your computerAlways be sure you have the best, up-to-date security software installed to protect your computers, laptops, tablets and smartphones.
