Gardner Dozois

Alex's Adventures in Numberland Alex Bellos, 2010-04-05 A tenth anniversary edition of the iconic book about the wonderful world of maths Sunday Times bestseller | Shortlisted for the BBC Samuel Johnson Prize 'Original and highly entertaining' Sunday Times 'A page turner about humanity's strange, never easy and, above all, never dull relationship with numbers' New Scientist 'Will leave you hooked on numbers' Daily Telegraph In this richly entertaining and accessible book, Alex Bellos explodes the myth that maths is best left to the geeks, and demonstrates the remarkable ways it's linked to our everyday lives. Alex explains the surprising geometry of the 50p piece, and the strategy of how best to gamble it in a casino. He shines a light on the mathematical patterns in nature, and on the peculiar predictability of random behaviour. He eats a potato crisp whose revolutionary shape was unpalatable to the ancient Greeks, and he shows the deep connections between maths, religion and philosophy. From the world's fastest mental calculators in Germany to numerologists in the US desert, from a startlingly numerate chimpanzee in Japan to venerable Hindu sages in India, these dispatches from 'Numberland' are an unlikely but exhilarating cocktail of history, reportage and mathematical proofs. The world of maths is a much friendlier and more colourful place than you might have imagined. This anniversary edition is fully revised and updated.

The Best American Science Writing 2003 Oliver

Sacks,2003-09-02 In his introduction to The Best American Science Writing 2003, Dr. Oliver Sacks, the poet laureate of medicine New York Times writes that the best science writing . . . cannot be completely 'objective' -- how can it be when science itself is so human an activity? -- but it is never self-indulgently subjective either. It is, at best, a wonderful fusion, as factual as a news report, as imaginative as a novel. Following this definition of good science writing, Dr. Sacks has selected the twenty-five extraordinary pieces in the latest installment of this acclaimed annual. This year, Peter Canby travels into the heart of remote Africa to track a remarkable population of elephants; with candor and tenderness, Floyd Skloot observes the toll Alzheimer's disease is taking on his ninety-one-year-old mother, and is fascinated by the memories she retains. Gunjan Sinha explores the mating behavior of the common prairie vole and what it reveals about the human pattern of monogamy. Michael Klesius attempts to solve what Darwin called an abominable mystery: How did flowers originate? Lawrence Osborne tours a farm where a genetically modified goat produces the silk of spiders in its milk. Joseph D'Agnese visits a home for retired medical research chimps. And in the collection's final piece, Richard C. Lewontin and Richard Levins reflect on how the work of Stephen Jay Gould demonstrated the value of taking a radical approach to science. As Dr. Sacks writes of Stephen Jay Gould -- to whose memory this year's anthology is dedicated -- an article of his was never predictable, never dry, could not be imitated or mistaken for anybody else's. The same can be said of all of the good writing contained in this diverse collection.

Endangered Tim Flach,2017-10-24 The acclaimed wildlife

photographer presents “a powerful visual record of threatened animals and ecosystems facing the harshest of challenges” (The Guardian, UK). In *Endangered*, the result of an extraordinary multiyear project to document the lives of threatened species, acclaimed photographer Tim Flach explores one of the most pressing issues of our time. Traveling around the world—to settings ranging from forest to savannah to the polar seas to the great coral reefs—Flach has captured stunning images of endangered animals and their disappearing ecosystems. Among Flach’s subjects are primates coping with habitat loss, big cats in a losing battle with human settlements, elephants hunted for their ivory, and numerous bird species taken as pets. With eminent zoologist Jonathan Baillie providing insightful commentary on this ambitious project, *Endangered* unfolds as a series of vivid, interconnected stories that pose gripping moral dilemmas, unforgettably expressed by more than 180 of Flach’s incredible images.

The Best American Science and Nature Writing 2021 Ed Yong, Jaime Green, 2021-10-12 New York Times best-selling author and renowned science journalist Ed Yong compiles the best science and nature writing published in 2020. The stories I have chosen reflect where I feel the field of science and nature writing has landed, and where it could go, Ed Yong writes in his introduction. They are often full of tragedy, sometimes laced with wonder, but always deeply aware that science does not exist in a social vacuum. They are beautiful, whether in their clarity of ideas,

the elegance of their prose, or often both. The essays in this year's Best American Science and Nature Writing brought clarity to the complexity and bewilderment of 2020 and delivered us necessary information during a global pandemic. From an in-depth look at the moment of the virus's outbreak, to a harrowing personal account of lingering Covid symptoms, to a thoughtful analysis on how the pandemic will impact the environment, these essays, as Yong says, synthesize, evaluate, dig, unveil, and challenge, imbuing a pivotal moment in history with lucidity and elegance.

How to Make an Apple Pie from Scratch Harry Cliff, 2021-08-10 NAMED A BEST SCIENCE BOOK OF 2021 BY KIRKUS * An acclaimed experimental physicist at CERN takes you on an exhilarating search for the most basic building blocks of our universe, and the dramatic quest to unlock their cosmic origins. A fascinating exploration of how we learned what matter really is, and the journey matter takes from the Big Bang, through exploding stars, ultimately to you and me. (Sean Carroll) Carl Sagan once quipped, "If you wish to make an apple pie from scratch, you must first invent the universe." But finding the ultimate recipe for apple pie means answering some big questions: What is matter really made of? How did it escape annihilation in the fearsome heat of the Big Bang? And will we ever be able to understand the very first

moments of our universe? In *How to Make an Apple Pie from Scratch*, Harry Cliff—a University of Cambridge particle physicist and researcher on the Large Hadron Collider—sets out in pursuit of answers. He ventures to the largest underground research facility in the world, deep beneath Italy's Gran Sasso mountains, where scientists gaze into the heart of the Sun using the most elusive of particles, the ghostly neutrino. He visits CERN in Switzerland to explore the Antimatter Factory, where the stuff of science fiction is manufactured daily (and we're close to knowing whether it falls up). And he reveals what the latest data from the Large Hadron Collider may be telling us about the fundamental nature of matter. Along the way, Cliff illuminates the history of physics, chemistry, and astronomy that brought us to our present understanding—and misunderstandings—of the world, while offering readers a front-row seat to one of the most dramatic intellectual journeys human beings have ever embarked on. A transfixing deep dive into the origins of our world, *How to Make an Apple Pie from Scratch* examines not just the makeup of our universe, but the awe-inspiring, improbable fact that it exists at all.
