Body Mass Index and Health Linda A. Ferrera, 2005
The Federal guidelines on the identification, evaluation, and treatment of overweight and obesity in adults have defined overweight as a body mass index value between 25 and 29.9; and obesity as a body mass index value greater than or equal to 30. BMI is a ratio between weight and height. It is a mathematical formula that correlates with body fat, used to evaluate if a person is at an unhealthy weight (given a certain height). BMI value is more useful for predicting health risks than the weight alone (for adults ages 18 and up). Individuals with high BMI's are at increased risk of developing certain diseases, including: Hypertension, Cardiovascular Disease, Dyslipidemia, Adult-Onset Diabetes (Type II), Sleep Apnea, Osteoarthritis, Female Infertility, and other Conditions, including: idiopathic intracranial hypertension lower extremity venous stasis disease, gastroesophageal reflux and urinary stress incontinence. This new book gathers research from around the world in the critical field of obesity research and its effects.

Evolution of Cardio-Metabolic Risk from Birth to Middle Age Gerald S. Berenson, 2011-07-09 That precursors of adult coronary artery disease, hypertension, and type II diabetes begin in childhood have been clearly established by the Bogalusa Heart Study. This unique research program has been able to follow a biracial (black/white) population over 35 years from childhood through mid-adulthood to provide perspectives on the natural history of adult heart diseases. Not only do these observations describe trajectories of

cardio-metabolic risk variables leading to these diseases but provide a rationale for the need to begin prevention beginning in childhood. The trajectories of the burden of cardio-metabolic risk variables in the context of their fetal origin and chromosome telomere dynamics provide some insight into the metabolic imprinting in utero and aging process. The observed racial contrasts on cardio-metabolic risk variables implicate various biologic pathways interacting with environment contributing to the high morbidity and mortality from related diseases in our population. To address the seriousness of the onset of cardiovascular disease in youth, approaches to primordial prevention are described focussing on childhood health education as an important aspect of Preventive Cardiology.

Obesity World Health Organization, 2000 This report issues a call for urgent action to combat the growing epidemic of obesity, which now affects developing and industrialized countries alike. Adopting a public health approach, the report responds to both the enormity of health problems associated with obesity and the notorious difficulty of treating this complex, multifactorial disease. With these problems in mind, the report aims to help policy-makers introduce strategies for prevention and management that have the greatest chance of success. The importance of prevention as the most sensible strategy in developing countries, where obesity coexists with undernutrition, is repeatedly emphasized. Recommended lines of action, which reflect the consensus reached by 25 leading authorities, are based on a critical review of current scientific knowledge about the causes of obesity in both individuals and populations. While all causes are considered, major attention is given to behavioural and societal changes that have increased the energy density of diets, overwhelmed sophisticated regulatory systems that control appetite and maintain energy balance, and reduced physical activity. Specific topics discussed range from the importance of fat content in the food supply as a cause of population-wide obesity, through misconceptions about obesity held by both the medical profession and the public, to

strategies for dealing with the alarming prevalence of obesity in children. ... the volume is clearly written, and carries a wealth of summary information that is likely to be invaluable for anyone interested in the public health aspects of obesity and fatness, be they students, practitioner or researcher. - Journal of Biosocial Science
