Disarming Hitlers V Weapons Chris Ransted, 2013-09-19 An account of the “brave men of the bomb disposal units who died disarming the weapons that Hitler hoped would save the Nazis from defeat” (Dover Express/Folkestone Herald). In 1944 the V-1s and V-2s, Hitler’s “vengeance” weapons, were regarded by the Allied leaders in London as the single greatest threat they had faced. It was feared that these flying bombs and rockets might turn the tide of war once again in Germany’s favor. Yet, little more than half of these missiles hit their targets, some failing to explode. Their wreckage lay across the southern half of England or in Europe, with contents liable to sudden and deadly ignition. It was the job of specialist Bomb Disposal teams to render the V-weapons safe and uncover their secrets. This is their story. In this unique book Chris Ransted has investigated the work of these unsung heroes who risked their lives every time they were called into action and, in the course of his research he has located the sites of many of the unexploded V-weapons, revealed here for the first time. Ransted also details the methods used by the Bomb Disposal men and the equipment they used. The book is richly illustrated with 266 photographs and diagrams, many of which have never previously been published. In completing this, the most comprehensive study of its kind, the author describes the deeds of those gallant Bomb Disposal men that were awarded one of the highest honors which could have been bestowed upon them by their country—the George Medal. “A particularly thorough and enlightening book.”—Military Vehicle Trust

The Bomb and America's Missile Age Christopher Gainor, 2018-10-15 Aimed at readers interested in the history of the Cold War and of space exploration, the book makes a major contribution to the history of rocket development and the nuclear age.

V-1 Flying Bomb 1942–52 Steven J. Zaloga, 2011-07-20 The first deployment of the V-1 was in June 1944 when, following two years of tests, Hitler gave the order to attack England. Known to the Allies as the Buzz Bomb or Doodlebug, the V-1 was the world's first cruise missile. This book explores the V-1 in detail, from its initial concept, first use in 1944, the various Allied counter-measures, and the later use of the V-1 during the Battle of the Bulge. The major foreign derivatives, including the US copy JB-2 Loon and numerous post-war Soviet variants, are also covered.

Rockets and Ray Guns: The Sci-Fi Science of the Cold War Andrew May, 2018-05-26 The Cold War saw scientists in East and West racing to create amazing new technologies, the like of which the world had never seen. Yet not everyone was taken by surprise. From super-powerful atomic weapons to rockets and space travel, readers of science fiction (SF) had seen it all before. Sometimes reality lived up to the SF vision, at other times it didn't. The hydrogen bomb was as terrifyingly destructive as anything in fiction, while real-world lasers didn't come close to the promise of the classic SF ray gun. Nevertheless, when the scientific Cold War culminated in the Strategic Defence Initiative of the 1980s, it was so science-fictional in its aspirations that the media dubbed it “Star Wars”. This entertaining account, offering a plethora of little known facts and insights from previously classified military projects, shows how the real-world science of the Cold War followed in the footsteps of SF – and how the two together changed our perception of both science and scientists, and paved the way to the world we live in today.

Project Orion George Dyson, 2003-04 Project Orion describes one of the most awesome 'might have beens' (and may yet bes!) of the space age. This is essential reading for anyone interested in government bureaucracies and the military industrial complex. -Sir Arthur C. Clarke

Rockets and Missiles A. Bowdoin Van Riper, 2007-11-26 Beginning with World War II, missiles transformed the art of war. For the first time, cities of warring nations were vulnerable to sudden, unannounced, long-distance attacks. At the same time, rockets made possible one of the great triumphs of the modern age—the exploration of space. Beginning with the origins of rocketry in medieval and early modern Asia, *Rockets and Missiles* traces the history of the technology that led to both the great fear of global warfare and the great excitement of the Space Age. This volume focuses on rocketry in late-twentieth-century Western Europe, Russia, and the United States, as well as the spread of rocket technology to East Asia and the Middle East. It covers the full history of rocket technology—including how rockets improved in performance, reliability, and versatility and how they affected everyday life.

The Year Of The Buzz Bomb; A Journal Of London, 1944 Richard Brown Baker, 2015-11-06 One humble GI working for the OSS in London recounts his experiences under bombardment by the Nazi wonder-weapon, the V-1 flying rocket. “London in April and May of 1944 was a battered, cheered hero. The whole Allied world admired the fortitude of its inhabitants, survivors of the fires and explosions of persistent Luftwaffe attacks. “It was to this London that I came as one of the innumerable Americans shipped overseas for the war effort, having crossed the Atlantic on the crowded Queen Mary, nearly fifteen thousand troops aboard, which sped out of submarine range into a Scottish port toward the end of March. We came, a batch of us, by night in a darkened troop-train to London, where we arrived in a gray dawn as one of the last of the “Little Blitz” air attacks was ending. “After 1944’s balmy, agreeable April the weather worsened. Then by mid-June began the prolonged and terrifying bombardment of London by flying bombs (nicknamed also V-1, buzz bombs, doodle bugs, rocket bombs, and pilotless planes) that were launched from across the English Channel.”

Catch a Rocket Plane Robert F Brodsky, Dr, Robert F. Brodsky, 2012-10-01 “Rocket Plane” provides vignettes of actions taken by the aerospace sector over the last 60 years. The author participated as a pioneer in the successive blossomings of the Atomic Age, the Guided Missile Age, and the Space Age. The book covers his pre-engineering life at college at Cornell and in the Navy during WW II; his time in post war grad school at NYU; his work on the atomic bomb in New Mexico; followed successively by jobs in Southern California in the guided missile field at Convair/Pomona and then in space endeavors at Aerojet/Azusa and later at TRW in Redondo Beach, with a stint as a Professor/Department Head at Iowa State University in between. He concluded his technical career by retirement from teaching at the University of Southern California, while, as Chief Engineer, helping Microcosm, Inc. get off the ground; then, while occasionally consulting, moving into the twilight zone, where some interesting consulting and travel adventures took place, and where he started writing and publishing books. Robert F. Brodsky is a pioneer in both spacecraft design and the teaching of astronautics. He is listed in “Who’s Who in –America”, -Engineering and Science” and, -American Education”. Until his retirement in 1996, he was a professor of astronautical engineering at the University of

Southern California. During his career, he has held executive engineering positions at Sandia Corporation, Aerojet, Convair, TRW Space and Technology and Microcosm, Inc.. He was named Outstanding Aerospace Educator(AIAA/ASEE) and University Professor of the Year (ASAE), among many honors. The Table of Contents follows: CONTENTS DEDICATION INTRODUCTION/ACKNOWLEDGEMENT PREFACE The Engineering Life Chapter 1 The Making of an Engineer Learning to fly at Cornell; Navy adventures during the War; Hot Jazz and grad school Chapter 2 Atom Bomb Stories The dawn of the nuclear age in New Mexico; Settling in at Sandia; The people who made the Bomb Chapter 3 The Space Age Cometh Getting to California and then into Space; Living it up in Paris; Pioneering space adventures Chapter 4 La Vie Academe Ames, Iowa in the '70s; Bringing Space to Academia; The Faculty Improvement Leave sabbatical in the South Bay Chapter 5 Space by the Sea Working at TRW- Teaching at USC; Fighting for the Space Lifeboat, Visiting Professing in Haifa Chapter 6 Snapshots from the Turn of the Century A survey of lectures made by the movers and shakers in the period 1997 to 2009 as reviewed by the author Chapter 7 Winding down at Work Assessing aerospace engineering academic programs; discussing the fine art of teaching at the University level; easing into retirement Chapter 8 Ain't Retirement Grand The 'expert witnessing' game; Starring on stage, screen and radio; Love-Hate relationship with the WEB; 'round the World; 70th High School reunion "Rocket Plane" provides vignettes of actions taken by the aerospace sector over the last 60+ years. Since the author participated, both as a player and a teacher, in the successive blossomings of the Aviation Age, the Atomic Age, the Guided Missile Age, and the Space Age, he is here providing a kaleidoscope of high points in accomplishments and failures as they occurred. Dr. Robert F. Brodsky is listed in "Who's Who in -America", -Engineering and Science" and, -American Education". he was a professor of astronautical engineering at the University of Southern California, and prior to that - was Professor and Head of the Aero. Hitler's Miracle Weapons: the Secret History of the Rockets and Flying Crafts of the Third Reich Friedrich Georg, 2003 Following on from the success of volume 1, Friedrich Georg's second book in the series covers unconventional short- and medium-range weapons. In particular, this volume includes a wealth of information about the V-rocket programme, not just the more familiar V-1 and V-2, but special variants of these two rockets as well as later experimental craft and weaponry. Following a fascinating examination of pre-war efforts to build flying bombs, the author examines the V-1 and V-2 projects in great detail. Particular attention is paid to special variants that have previously received little coverage. These include the V-2 A-4 'America Rocket', and V-2s designed to carry nuclear and radiological warheads. The capability of the Germans to deploy such weapons is also discussed. A large number of weird and wonderful projects that never left the drawing board are examined, including the FR-35, V-6, V-101, Waterfall and Naval EMW A-7 rockets. The fascinating final section examines German plans to utilise such rocketry against London and Paris in 1945, as well as recounting the activities of V-weapons on other fronts, including Italy, Yugoslavia and the Eastern Front. The text is supported by b/w photographs and 16 superb pages of colour artwork, including profiles, computer-generated images of designs that never flew, and pictures of the author's own models.

Rockets and Missiles David Mondey, John William Ransom Taylor, 1971 Traces the development of the rocket as it developed from missile to space probe.

The Flying Bomb War Peter Haining, 2002 In October 1942, the prototype German V2 rocket was launched. Two months later the V1 (or Doodlebug) was also fired. Together these two missiles were destined to attack England in a merciless onslaught. This text offers an insight into a significant part of World War

II.

The Rockets' Red Glare Wernher Von Braun, Frederick Ira Ordway, Frederick Ira Ordway (III), 1976 Traces the development of rockets from the Middle Ages to modern times.

The Coming Age of Rocket Power George Edward Pendray, 1947 Beskriver udviklingen af raketter og raketmotorer.

Air-Launched Doodlebugs Peter C. Smith, 2007-04-13 The V 1, or Doodlebug or Flying-bomb came into use in June 1944 and, together with the V 2 Rocket, was Hitler's final hope in face of the advancing Allied forces sweeping across Europe towards Germany. Of the 8,000 that were launched within the first 80 days, some 2,300 reached the London area where they caused more death and destruction to its population and buildings. As the front line moved eastwards, many of the ground-based launch ramps became denied to the German forces and the modest range of the missile meant that other means of launching must be considered to continue the threat. An air-launching system, utilizing the Luftwaffe's Heinkel 111 bomber, was developed and operated by the newly formed Kampfgeschwader units. This posed a dramatic new threat to the UK because the V 1's effective range was considerably increased and its mobile firing point offered a much greater target area when fired from an aircraft flying over the North Sea. This is the story of the development and operation of this new form of attack and also of the Allied reaction and defense-measures taken to minimize damage.

Len Beadell's Legacy Ian Albert Edgar Bayly, 2009 In June 1952, Len Beadell was called to a secret meeting in Salisbury, South Australia, and informed of the decision to explode an atomic bomb in Australia. He was set the task of finding an appropriate site. After exploring country to the west of Coober Pedy, he found an unnamed claypan (later called Emu) which the military approved as being suitable. It was close to the Emu Claypan that atomic bombs (Totem 1 and 2) were exploded on 15 and 27 October 1953. Even before the first of these two bombs was exploded, Beadell was asked to find a second site closer to the Trans Australian Railway. This second site was ominously called Maralinga (Aboriginal for thunder), and it was here that between 27 September 1956 and 9 October 1957 seven atomic bombs were exploded. In November 1955, after the experience of surveying and constructing the Emu and Maralinga sites and their associated access roads, Beadell headed a group that became known as the Gunbarrel Road Construction Party. Despite their relatively slender resources, this group was responsible for the construction of a remarkable system of roads through remote, mainly desert country to the west of the Stuart Highway. The first part of the Gunbarrel Highway, from Victory Downs station (close to the Stuart Highway) to Giles, was built between November 1955 and March 1956, and the second section from Giles to Carnegie Homestead was completed in November 1958. Other roads constructed were the Mount Davies Road (1956 & 1957), Sandy Blight Junction Road (1960), Gary Junction Road (1960 & 1963), Anne Beadell Highway (mostly 1961 & 1962), Voles Hill-Cook Road (1961), Connie Sue Highway (1962), Gary Highway (1963), Callawa Track (1963) and Tallawana Track (1963). The work of the Gunbarrel Road Construction Party came to an end when they reached the ruins of old Tallawana Homestead on 6 November 1963. Over a period of almost exactly eight years, this gallant group had constructed about 6,000 kilometres of roads. This book describes the extraordinary adventures and difficulties faced by Len Beadell and his group. Beadell showed remarkable courage and resourcefulness during his long and arduous solo reconnaissance trips. It was on one of these that he came very close to losing his life in March 1958.

Operation Big Ben Craig Cabell, 2017-03-17 When Hitler unleashed his V1 and V2 rockets on Great Britain in 1944, it was the first military attack on the

British civilian population without invasion. Innocent families were wiped out without mercy and terror gripped the nation. Churchill and the Crossbow Committee knew that widespread panic would soon ensue, because the British public were becoming increasingly anxious about the Nazis superior technology, which was destroying their lives. But through important intelligence from Bomber Command, Naval commandos, the French and Dutch Resistances in Europe, and the precise plotting of V rocket activity in the Filter Room of Fighter Command through air reconnaissance, a Top Secret plan was formed to dive-bomb V rocket installations with Mark IX and Mark XVI Spitfires. Craig Cabell is the writer and historian responsible for bringing Operation Big Ben to world attention. He has studied the original documentation since its release from the National Archive in 2004 and interviewed veterans who took part in the operation, such as Flight Lieutenant Raymond Baxter. Cabell's initial research resulted in many accolades and now resides in the 602 'City of Glasgow' Squadron Museum. But now, for the first time, Cabell has put together the whole story of Operation Big Ben, showing the work of the Crossbow Committee, intelligence Commandos under the orders of Commander Ian Fleming, the French and Dutch Resistances, and the brave men who flew the Spitfires of 124, 229, 303, 453, 602 and 603 squadrons. For the sake of accuracy and attention to detail, this book concentrates on the day-to-day activity of Spitfires during Operation Big Ben and the work of the various strands of British intelligence before and during it. In this book Operation Big Ben is separated from Operation Crossbow, (the anti-V1 operation) to show how the British government stepped up its urgency to counter the V2 threat. Although some of the detail could be considered repetitious in places (many cuts of non-operational flying have been made from the histories of each squadron in order to keep the flow of the book thought-provoking and interesting), the focus is on accuracy. The author has noted that in other publications that touch on Operation Big Ben, specific activity has not been documented correctly. This is because squadron histories haven't been cross-referenced in the past. Each squadron history in this book, mentions the work of other Big Ben squadrons (to report on the filtering of intelligence, escort work for other larger operations, or the details of the weather conditions experienced and the plight of the Dutch people during the harsh winter of 1944-45) to create a fuller and more visual picture of what happened. It is appreciated that aviation historians and enthusiasts alike will analyse this volume for the details of the Spitfires used. In a nutshell, Mark IXF Spitfires started Operation Big Ben. These had elliptical wings to begin with and then progressed to clipped-wing (pin-pointing exact dates has not always been possible). The Mark XVI became the cream of the crop for the most important squadrons (602, 603 and to a lesser degree 303; with 602 being the first to have them, followed by 303), Mark V's were used for training purposes. For dive-bombing purposes, two 250 lb bombs were used under each wing for balance, with a 500 lb bomb under the fuselage. Occasionally just the 500 lb bomb was carried, sometime just the two 250 lb bombs, depending on how far they had to fly inland or the difficulty of the job in-hand (the greater weight the more fuel used). Version 5 roundel was used and Operation Big Ben insignia on either side of the fuselage.
