The Global Financial Crisis and Its Aftermath A. G. Malliaris,Leslie Shaw,Hersh Shefrin,2016 ... Expert contributors argue that the complexity of the Global Financial Crisis challenges researchers to offer more comprehensive explanations by extending the scope and range of their traditional investigations. To achieve this, the volume views the financial crisis simultaneously through three different lenses--economic, psychological, and social values ... They recognize how current economic analysis did not prepare academic economists, business economists, traders, and regulators to anticipate economic and financial crises ...

Neuroanesthesia and Cerebrospinal Protection Hiroyuki Uchino,Kazuo Ushijima,Yukio Ikeda,2015-08-07 This book is a knowledge-based text that covers the anatomy, neurophysiology, and neuropharmacology needed to carry out the necessary management and cerebrospinal protection during neuroanesthesia. Especially to make the subject of neuroanesthesia more approachable, we introduce surgical measures utilized in neurosurgery, cardiovascular surgery, neuromodulation, and related procedures. The main purpose of neuroanesthesia/neurocritical care is to deliver cerebrospinal protection in neurosurgical and cardiovascular surgeries. How should we select the best anesthetic management to prevent neurological complications for patients who, for instance, undergo different types of surgery for subarachnoid hemorrhage, stroke, head trauma, carotid endarterectomy, or cardiovascular surgery under cardiopulmonary bypass? These pathological conditions include the risk of transient cerebrospinal ischemia, and if our management is not precise, it may induce serious neurological sequelae. Although there is an urgent need to establish the treatment and elucidate the molecular mechanisms of cerebrospinal injury, many components are intertwined, making this a challenge we have not completely solved yet. This volume makes the management of neuroanesthesia more accessible not only for primary residents but also for specialists, providing a valuable resource on the current perspectives of neuroanesthesia.

Bubble Gum Brain Julia Cook,2017-04-25 BECOMING is better than BEING. I have Bubble Gum Brain. I like to chew on my thoughts, flex, bend and stretch my brain, and expand the way I think! I make great mistakes that help me learn. I have Brick Brain. With me, things are the way they are...and they're probably not going to change much. I am the way I am...and that's just how it is. Meet Bubble Gum Brain and Brick Brain: two kids with two VERY different mindsets. Bubble Gum Brain likes to have fun adventures, learn new things, and doesn't worry about making great mistakes. Brick Brain is convinced that things are just fine the way they are and there's not much he can do to change them, so why try? When Bubble Gum Brain shows Brick Brain how to peel off his wrapper, Brick Brain begins to realize just how much more fun school...and life... can be! This creative story teaches children (and adults) the valuable lesson that becoming is better than being, which can open the door to a whole new world of possibilities! Ready, Get Mindset...GROW!!

Nanoscience Hans-Eckhardt Schaefer,2010-08-26 Nanoscience stands out for its interdisciplinarity. Barriers between disciplines disappear and the fields tend to converge at the very smallest scale, where basic principles and tools are universal. Novel properties are inherent to nanosized systems due to quantum effects and a reduction in dimensionality: nanoscience is likely to continue to revolutionize many areas of human activity, such as materials science, nanoelectronics, information processing, biotechnology and medicine. This textbook spans all fields of nanoscience, covering its basics and broad applications. After an introduction to the physical and chemical principles of nanoscience, coverage moves on to the adjacent fields of microscopy, nanoanalysis, synthesis, nanocrystals, nanowires, nanolayers, carbon nanostructures, bulk nanomaterials,

nanomechanics, nanophotonics, nanofluidics, nanomagnetism, nanotechnology for computers, nanochemistry, nanobiology, and nanomedicine. Consequently, this broad yet unified coverage addresses research in academia and industry across the natural scientists. Didactically structured and replete with hundreds of illustrations, the textbook is aimed primarily at graduate and advanced-undergraduate students of natural sciences and medicine, and their lecturers.

The Art of Blowing Bubbles Jesse Ward, Phillip Maxwell-Stewart, 2019

The Genius of the Beast Howard Bloom, 2010-05-01 Is global capitalism on its last legs? Is the era of American leadership over? Has the West begun a decline into a new Dark Age? Does American civilization deserve to survive? These are the unnerving questions raised by the Great Crash of 2009. This book presents a radically new answer, insisting that global society has only begun to realize its full potential. Author Howard Bloom argues that there's a hidden mandate beneath the surface of capitalism: It's struggling to whisper and rumble its message to you and me. That hidden imperative can lift us from economic crisis, can make us a leader in the next-generation economy, and can dramatically upgrade our ability to empower our fellow human beings. Bloom sees crisis as opportunity, opportunity for the whole human race. In more than eighty short, fast chapters, insights appear suddenly, like the quick bursts of flashbulbs, taking the reader on a sweeping tour of human history, from the Stone Age to the present. Every chapter conveys a radically new way to see the astonishing mechanism we call Western Civilization. Bloom marvels at how humans have turned toxic waste into food and fuel, trash into treasure, and garbage into gold. He shows how we've produced material miracles based on immaterial things—passion, persistence, and fantasy. He shows that what many regard as the end is just the beginning. The beginning of something you've never before imagined. The author explains why the secret to capitalism's next great leap does not lie in new financial tricks, but in tapping things right under our noses in radically new ways—that is, tapping our imagination, our desire to feel useful, our desire to help others, and our desire to be recognized for contributing to the welfare of humanity. The key to next-generation capitalism lies in a big-picture view that's utterly unlike anything you've previously perceived. A big-picture view that will startle you. A big-picture view with which you can ignite the world, get a new handle on your life, and help transform society. This brilliant, inspirational work of daring ideas and breathtaking research offers more than hope. It offers unseen levels of understanding. Understanding that can literally redefine what it means to be a human being.

Self-Organizing Maps Teuvo Kohonen, 2012-12-06 The Self-Organizing Map (SOM), with its variants, is the most popular artificial neural network algorithm in the unsupervised learning category. About 4000 research articles on it have appeared in the open literature, and many industrial projects use the SOM as a tool for solving hard real world problems. Many fields of science have adopted the SOM as a standard analytical tool: statistics, signal processing, control theory, financial analyses, experimental physics, chemistry and medicine. This new edition includes a survey of over 2000 contemporary studies to cover the newest results. Case examples are provided with detailed formulae, illustrations, and tables. Further, a new chapter on software tools for SOM has been included whilst other chapters have been extended and reorganised.

Escourolle & Poirier's Manual of Basic Neuropathology Francoise Gray, Charles Duyckaerts, Umberto De Girolami, 2013-11-15 Now in its 5th edition, Escourolle & Poirier Manual of Basic Neuropathology continues the tradition of being one of the most respected texts in neuropathology by providing an introduction to the various diseases of the nervous system and their underlying pathology. This thorough, yet concise manual covers the full spectrum of the various categories of neurologic disease, including neoplasia, trauma, vascular disease, and infection, with separate chapters on prion diseases, multiple sclerosis, degenerative disorders, acquired metabolic diseases, hereditary metabolic diseases, congenital malformations, perinatal diseases, skeletal muscle, peripheral nerve, and the pituitary gland. To accurately guide the clinician, the most current techniques in neuropathology are covered in their own chapter at the end of the book. Richly illustrated throughout, with over 700 images of various neuropathological diagnoses such as tumor, stroke, infection, degeneration, and malformation among others, this new edition of the classic monograph is an easy-to-use manual for any student, researcher, or practitioner seeking basic information on neuropathology. Used for decades in all fields related to the nervous system—including neurology, neurosurgery, psychiatry, neuroradiology, neuroendocrinology, neuropathology, pathology, and neuroscience- Escourolle & Poirier Manual of Basic Neuropathology is regarded at the 'bible' of neuropathology. This new version has been completely rewritten and expanded to include important updates in genetics and molecular biology, reflective of the important neuropathological discoveries in those fields over the past decade. This book is a practical diagnostic tool and necessary reading for anyone encountering pathological conditions of the nervous system.

Underwater Medicine and Related Sciences Charles Wesley Shilling, 2012-12-06 This volume follows and updates AN ANNOTATED BIBLIOGRAPHY ON DIVING AND SUBMARINE MEDICINE published by Gordon and Breach, Science Publishers, Inc., in 1971. The time period covered is primarily the calendar years 1970 and 1971. Also included, however, is much material from the calendar years 1968 and 1969 not in the previous publication. A brief analysis of the sources of material precedes the citations and abstracts, which comprise the main section of the volume. The bibliography is followed by a permuted subject index and an author index.

Also included, following the indexes, is a micro thesaurus. Although no attempt has been made to do a critical subject analysis, such an analysis could be accomplished through selecting a particular subject, looking up the appropriate key works in the rotated index, identifying the abstracts, analyzing them, obtaining complete copy as desired, and completing the critical review. David C. Weeks, Ph.D. Director, BSCP Washington, D.C.

9 SHORTS by David Stein, **Inventor of the Bubble Thing** David Stein,2019-08-30 This book collects nine short works by inventor David Stein. He has urgent things to say about religion, trees, the atom bomb, Zen, Mom, the millennium, Montana, dreams, art, and the biggest bubble of al: THE HALO There was a child born on Horse Island with a halo, but nothing much came of it--- It was a honey-colored halo like the ones you see in old paintings, but smaller, only four inches across. Its glow was faint. It floated in the air slightly off the child's head... THE INVENTION OF GOD I often meet the devout and they often try to recruit me--- Recently I met a man walking his dog above town. He was a minister newly arrived at a steeple down below, and he invited me to join his bible study group. I had to decline. When he asked why, I said my views on religion were so strange they might wreck the faith of his other members... BOWING LESSONS Bow to a salt shaker. / Bow to the salt white and sloping / filling half the shaker. / Bow to a pepper shaker standing / alongside. / Bow to the sound of a volleyball / being punched across a net. / Bow to birdsongs, to the drone / of a plane / Bow to the voices of young women / flinging a frisbee across a lawn... MADLO: HOW DIGITAL TECHNOLOGY CAN RID THE WORLD OF NUCLEAR WEAPONS Remember the Cold War? Fear of incoming missiles? Fear of being vaporized by a monstrous ball of fire? Diving under your desk and waiting for the end?--- Well, the Cold War is still with us. Thousands of nuclear missiles still stand ready to fire. And Cold War theory is still with us. The truly mad theory of Mutual Assured Destruction (MAD)... AN ODE TO MOM Now that I'm educated / (it's a long long road I've come), / perhaps my pen is equal / to an ode upon my Mom, / an ample subject even / for a man of fifty-four, / encompassing such matters / as the Second World War, / the Crash, the Great Depression, / indeed all History, / for Mom was a professor--- / she was professoring to me / even on the ranch (Montana) / long before she ever taught / college in Spokane--- / but I've lost my train of thought... MILLENNIUM: 1999 2000 2001 2006 (December 27, 1999) / What to do about the millennium-- / I could keep a journal-- / For instance I could say / I saw a peregrine falcon yesterday / perched on a nest in Central Park. / And as I stared, strange women / gathered round and spoke to me. / Is she feeding hatchlings? / No, how could she be, eggs don't hatch / in winter. Oh. Then she's tearing / at a squirrel. I guess so. / Little sights and sounds like that. / A journal... GO GREEN BY GIVING TREES You can be carbon neutral for only \$7.00 per year--- Your family, your business, your town, your state, can be carbon neutral for \$7.00 per year, times the number of people involved--- The entire United States, every man, woman, and child, can be carbon neutral for 2.3 billion dollars per year--- Donate to trees.org. Fund and grow it globally... TOUGH TRIP THROUGH PARADISE: THE MOVIE If a roughneck arms peddler rode in telling three different stories how his wife died in the wilderness, a good detective might suspect foul play and start asking questions--- The suspect is Andrew Garcia, author of the Montana classic Tough Trip Through Paradise, edited by my late father, Ben Stein. Mysteriously, for forty years, Ben kept Garcia's original manuscripts secret... 5 DREAMS OF CHRIST I dreamed that I was (wingless) Christ returning, I was gliding in slow motion down to crowded lawns and avenues of a spacious landscape garden-- I was sky high at first (I thought the people might be cabbages or goats)-- I was shocked, amazed to be the Christ, full of good intentions, eagerly looking forward to humanity's surprise and joy at my return--

Handbook of Materials for Nanomedicine Vladimir Torchilin,2020-03-16 In the fast-developing field of nanomedicine, a broad variety of materials have been used for the development of advanced delivery systems for

drugs, genes, and diagnostic agents. With the recent breakthroughs in the field, we are witnessing a new age of disease management, which is governed by precise regulation of dosage and delivery. This book presents the advances in the use of metal-based and other nanomaterials for medical imaging, diagnosis, theranostics, and drug delivery. It discusses silver, hybrid gold, and surface-modified magnetic nanoparticles, fluorescent quantum dots, lipid bubbles, and nanobubbles. It provides all available information about these materials and describes in detail their advantages and disadvantages and the areas where they could be utilized successfully. The text also covers topics such as improving bioactivity of poorly soluble actives, cellular and molecular toxicology of nanoparticles, and biofate of nanoemulsions.

Diving Physics with Bubble Mechanics and Decompression Theory in Depth B. R Wienke,2008 This book focuses on physics and associated mathematical relationships. Basic principles are first presented, and then practical applications and results are detailed. The intent here is to present a working view of physical phase mechanics, then followed by application to decompression theory in diving. It is directed toward the diver and reader with a basic understanding of decompression. Basically the mechanics of tissue gas exchange, bubbles and nucleation, supersaturation, perfusion and diffusion, and related mechanisms are discussed. The targeted audience is especially the doctor or physiologist, physicist, chemist, mathematician, engineer or biologist by training and also the commercial diver, technical diver, instructor, hyperbaric technician, underwater researcher, looking for greater detail.

Neurobiology of Mental Illness Dennis S. Charney,Joseph D. Buxbaum,Pamela Sklar,Eric J. Nestler,2013-07-04 Our understanding of the neurobiological basis of psychiatric disease has accelerated in the past five years. The fourth edition of Neurobiology of Mental Illness has been completely revamped given these advances and discoveries on the neurobiologic foundations of psychiatry. Like its predecessors the book begins with an overview of the basic science. The emerging technologies in Section 2 have been extensively redone to match the progress in the field including new chapters on the applications of stem cells, optogenetics, and image guided stimulation to our understanding and treatment of psychiatric disorders. Sections' 3 through 8 pertain to the major psychiatric syndromes-the psychoses, mood disorders, anxiety disorders, substance use disorders, dementias, and disorders of childhood-onset. Each of these sections includes our knowledge of their etiology, pathophysiology, and treatment. The final section discusses special topic areas including the neurobiology of sleep, resilience, social attachment, aggression, personality disorders and eating disorders. In all, there are 32 new chapters in this volume including unique insights on DSM-5, the Research Domain Criteria (RDoC) from NIMH, and a perspective on the continuing challenges of diagnosis given what we know of the brain and the mechanisms pertaining to mental illness. This book provides information from numerous levels of analysis including molecular biology and genetics, cellular physiology, neuroanatomy, neuropharmacology, epidemiology, and behavior. In doing so it translates information from the basic laboratory to the clinical laboratory and finally to clinical treatment. No other book distills the basic science and underpinnings of mental disorders and explains the clinical significance to the scope and breadth of this classic text. The result is an excellent and cutting-edge resource for psychiatric residents, psychiatric researchers and doctoral students in neurochemistry and the neurosciences.
