The Bubble Star Lesley-Anne Bourne,1998 The characters, setting and atmosphere of The Bubble Star are both rural (northern Ontario) and urban (Toronto). The novel focuses primarily on women -- three sisters -- and their relationships with each other and with men. We have marriage, we have affairs, we have a bit of sex, including a scene in an upscale bamboo furniture boutique. One of the secondary characters is a gay male. A lesbian couple appears, and one of the women is married to a professor who is having an affair with one of the sisters working in retail. When asked by Dale Zieroth (editor of Event magazine) what she feared most about the publication of The Bubble Star, Lesley replied, That people will read it and think it's a sitcom.' When Zieroth asked her what she hoped for the most from this novel, she answered That people will read it and think it's a sitcom.' Bourne goes on to say that she expects her audience will be anyone who reads The New Yorker, anyone who works in retail (because the novel has central characters who work in retail), or anyone who watches the Shopping Channel.

**From the Outer Heliosphere to the Local Bubble** J.L. Linsky,V.V. Izmodenov,E. Mobius,Rudolf von Steiger,2009-04-29 Knowledge about the outer heliosphere and the interstellar medium, which were long treated as two separate fields, has improved dramatically over the past 25 years as a consequence of recent developments: The discovery of interstellar pickup ions and neutral helium inside the heliosphere, the determination of the interstellar hydrogen distribution in the heliosphere obtained using backscattered solar Lyman-alpha radiation, the prediction and subsequent detection of the hydrogen wall just outside of the heliopause, the development of detailed global models for the interaction of solar wind plasma with the interstellar medium, and most recently, direct in-situ plasma and field measurements inside of the heliosheath. At the same time, our understanding of the nearby galactic environment, including the composition and dynamics of the warm gas clouds and hot gas in the local bubble, has benefited greatly from absorption-line spectroscopy using nearby stars as background sources and dynamic modeling. The present volume provides a synopsis of these developments organised into seven sections: Dominant physical processes in the termination shock and heliosheath, three-dimensional shape and structure of the dynamic heliosphere, relation of the plasmas and dust inside and outside of the heliosphere, origin and properties of the very local interstellar medium, energy and pressure equilibria in the local bubble, physical processes in the multiphase interstellar medium inside of the local bubble, and the roles that magnetic fields play in the outer heliosphere and the local bubble. The last theme is probably the most basic of all as magnetic fields play important roles in most of the phenomena discussed here. The volume concludes with four papers providing the big picture by looking at the time evolution of both the heliosphere and the local bubble, looking beyond the local bubble, and finally addressing the challenges in modeling the interface between the two media.

**Deep-Sky Companions: The Caldwell Objects** Stephen James O'Meara,2016-09-26 The Caldwell Catalogue, compiled by the late Sir Patrick Moore (1923–2012), has delighted amateur astronomers worldwide since its publication in 1995. Twenty years on, Stephen James O'Meara revisits his guide to these 109 deep-sky delights, breathing new life into them and the 20 additional observing targets included as an appendix. This second edition retains O'Meara's detailed visual descriptions and sketches, accompanied by stunning new images taken by amateur photographer Mario Motta and observations by Magda Streicher. The astrophysical descriptions have been updated to account for the many advances in our understanding of the objects, not least due to an armada of space-borne observatories and the new technologies used in large ground-based telescopes. Ideal for observers who have completed the Messier objects and are looking for their next challenge, Deep-Sky Companions: The Caldwell Objects is a fitting tribute from a renowned visual observer to one of astronomy's most famous personalities.

**Bubbleball** Ben Golliver,2021-05-04 A captivating account of the NBA's strangest season ever, from shutdown to championship, from a prominent national basketball writer living inside the bubble When NBA player Rudy Gobert tested positive for COVID-19 in March 2020, the league shut down immediately, bringing a shocking, sudden pause to the season. As the pandemic raged, it looked as if it might be the first year in league history with no champion. But four months later, after meticulous planning, twenty-two teams resumed play in a bubble at Disney World-a restricted, single-site locale cut off from the outside world. Due to health concerns, the league invited only a handful of reporters, who were required to sacrifice medical privacy, live in a hotel room for more than three months, and submit to daily coronavirus testing in hopes of keeping the bubble from bursting. In exchange for the constant monitoring and restricted movement, they were allowed into a basketball fan's dream, with a courtside seat at dozens of games in nearly empty arenas. Ben Golliver, the national NBA writer for the The Washington Post, was one of those allowed access. Bubbleball is his account of the season and life inside, telling the story of how basketball bounced back from its shutdown, how players staged headline-grabbing social justice protests, and how Lakers star LeBron James chased his fourth ring in unconventional and unforgettable circumstances. Based on months of reporting in the exclusive, confined environment, this is an entertaining record of an extraordinary season.

Star-Spangled Bubble J. R. Lester,2009-10 This anthology follows the lives of several Americans caught-up in the maelstrom of an economic and financial collapse and a war with China.

*The Interstellar Medium, Expanding Nebulae and Triggered Star Formation* Thomas G. Bisbas,2015-11-24 This brief brings together the theoretical aspects of star formation and ionized regions with the most up-to-date simulations and observations. Beginning with the basic theory of star formation, the physics of expanding HII regions is reviewed in detail and a discussion on how a massive star can give birth to tens or hundreds of other stars follows. The theoretical description of star formation is shown in simplified and state-of-the-art numerical simulations, describing in a more clear way how feedback from massive stars can trigger star and planet formation. This is also combined with spectacular images of nebulae taken by talented amateur astronomers. The latter is very likely to stimulate the reader to observe the structure of nebulae from a different point of view, and better understand the associated star formation therein.

It offers an absorbing account on the history of research on the universe and gravity from Aristotle via Copernicus via Newton to Einstein. The author possesses high literary qualities and is celebrated relativist. The physics of black holes constitutes one of the most fascinating chapters in modern science. At the same time, there is a fanciful quality associated with this strange and beautiful entity. The black hole story is undoubtedly an adventure through physics, philosophy, history, fiction and fantasy. This book is an attempt to blend all these elements together.
