The Red True Story Book Andrew Lang, 2016-09-01 The Red True Story Book needs no long Introduction. The Editor, in presenting The Blue True Story Book, apologised for offering tales so much less thrilling and romantic than the legends of the Fairies, but he added that even real facts were, sometimes, curious and interesting. Next year he promises something quite as true as History, and quite as entertaining as Fairies! For this book, Mr. Rider Haggard has kindly prepared a narrative of 'Wilson's Last Fight,' by aid of conversations with Mr. Burnham, the gallant American scout. But Mr. Haggard found, while writing his chapter, that Mr. Burnham had already told the story in an 'Interview' published by the Westminster Gazette. The courtesy of the proprietor of that journal, and of Mr. Burnham, has permitted Mr. Haggard to incorporate the already printed narrative with his own matter. 'The Life and Death of Joan the Maid' is by the Editor, who has used M. Quicherat's Procès (five volumes, published for the Historical Society of France), with M. Quicherat's other researches. He has also used M. Wallon's Biography, the works of Father Ayroles, S.J., the Jeanne d'Arc à Domremy of M. Siméon Luce, the works of M. Sepet, of Michelet, of Henri Martin, and, generally, all printed documents to which he has had access. Of unprinted contemporary matter perhaps none is known to exist, except the [viii] Venetian Correspondence, now being prepared for publication by Father Ayroles. 'How the Bass was held for King James' is by the Editor, mainly from Blackadder's Life.

Subsurface Contamination Monitoring Using Laser Fluorescence Katharine Balshaw-Biddle, Carroll L. Oubre, C. H. Ward, 2019-08-16 While innovative

technologies in remediation need to be developed, so do innovative ways of site assessment. This monograph describes the development, testing, and performance of a new laser-induced fluorescence soil probe. A screening tool for site characterization, this probe has the potential to provide an economical, rapid assessment of contaminated sites. Cone Penetrometer testing equipment advances the probe into the subsurface. The probe identifies hydrocarbon classes using a multi-channel excitation-emission matrix. This technique facilitates the collection of significant amounts of subsurface information - surpassing conventional data collection methods - that can be used to rapidly identify areas of concern beneath a site. The technology has significant application for the following: Rapid environmental site assessment Monitoring remediation programs Monitoring manufacturing processes and industrial waste water operations Subsurface Contamination Monitoring Using Laser Fluorescence provides comprehensive reference material for researchers and engineers as well as engineering consultants interested in subsurface monitoring techniques or further development of this technology. It describes innovative technology that focuses on finding cost effective solutions for site assessment and remediation.
