*Einstein's Clocks, Poincaré's Maps: Empires of Time* Peter Galison, 2004-09-17 More than a history of science; it is a tour de force in the genre.—New York Times Book Review A dramatic new account of the parallel quests to harness time that culminated in the revolutionary science of relativity, *Einstein's Clocks, Poincaré's Maps* is part history, part science, part adventure, part biography, part meditation on the meaning of modernity....In Galison's telling of science, the meters and wires and epoxy and solder come alive as characters, along with physicists, engineers, technicians and others....Galison has unearthed fascinating material (New York Times). Clocks and trains, telegraphs and colonial conquest: the challenges of the late nineteenth century were an indispensable real-world background to the enormous theoretical breakthrough of relativity. And two giants at the foundations of modern science were converging, step-by-step, on the answer: Albert Einstein, an young, obscure German physicist experimenting with measuring time using telegraph networks and with the coordination of clocks at train stations; and the renowned mathematician Henri Poincaré, president of the French Bureau of Longitude, mapping time coordinates across continents. Each found that to understand the newly global world, he had to determine whether there existed a pure time in which simultaneity was absolute or whether time was relative. Esteemed historian of science Peter Galison has culled new information from rarely seen photographs, forgotten patents, and

unexplored archives to tell the fascinating story of two scientists whose concrete, professional preoccupations engaged them in a silent race toward a theory that would conquer the empire of time.

**Clock and Compass** Mark Monmonier, 2022-04-12 A city guy who aspired to be a farmer, John Byron Plato took a three-month winter course in agriculture at Cornell before starting high school, which he left a year before graduation to fight in the Spanish-American War. He worked as a draftsman, ran a veneers business, patented and manufactured a parking brake for horse-drawn delivery wagons, taught school, and ran a lumber yard. In his early thirties he bought some farmland north of Denver, Colorado, and began raising Guernsey cattle, which he advertised for sale in the local paper. When an interested buyer eager to see his calves couldn't find his farm, Plato realized that an RFD postal address was only good for delivering mail. Plato's solution was a map-and-directory combo that used direction and distance from a local business center to give farmers a real address, just like city dwellers. He patented his invention called the "Clock System" and tried to sell it to the Post Office Department. What follows is a tale of persistence and failure as rural farming declined and technology and capitalism overtook John Byron Plato's chances at geographic immortality.

**Routledge Library Editions: Philosophy of Time**

Various Authors, 2021-03-05 Reissuing five works originally published between 1937 and 1991, this collection contains books addressing the subject of time, from a mostly philosophic point of view but also of interest to those in the science and mathematics worlds. These texts are brought back into print in this small set of works addressing how we think about time, the history of the philosophy of time, the measurement of time, theories of relativity and discussions of the wider thinking about time and space, among other aspects. One volume is a thorough bibliography collating references on the subject of time across many disciplines.

**The Map of Time** Félix J. Palma, 2012-06-26  
London, 1896. Andrew Harrington's lover Marie Kelly was murdered by Jack the Ripper and he longs to turn back the clock and save her. Meanwhile, Claire Haggerty, forever being matched with men her family considers suitable, yearns for a time when she can be free to love whom she chooses. As their quests converge, it becomes clear that time is the problem--to escape it or to change it. Hidden in the attic of popular author--and noted scientific speculator--H.G. Wells is a machine

that might offer them the hope they need!

**Clock and Compass** Mark Monmonier, 2022-04-12 A city guy who aspired to be a farmer, John Byron Plato took a three-month winter course in agriculture at Cornell before starting high school, which he left a year before graduation to fight with US troops during the Spanish-American War. After the war he worked as a draftsman, ran a veneers business, patented and manufactured a parking brake for horse-drawn delivery wagons, taught school, and ran a lumber yard. In his early thirties he bought some farmland north of Denver and began raising Guernsey cattle, which he advertised for sale in the local paper. When an interested buyer eager to see his calves couldn't find his farm, Plato realized that an RFD postal address was only good for delivering mail. Farmers had started buying cars and trucks, but without adequate maps and signage townsfolk couldn't visit them and they couldn't easily find each other. Plato's solution was a map-and-directory combo that used direction and distance from a local business center to give farmers a real address, just like city folk. He patented his invention and tried to sell it to the Post Office, which took a pass-their business was delivering mail, not facilitating travel. Because the clockface's hours provided the directions, he called his strategy the Clock System. Some Chicago promoters became intrigued but after their plans failed to gel, he decided to produce the maps himself. Rural sociologists at Cornell, who considered the Clock System an antidote for rural isolation, encouraged him to start a business in Ithaca, where he mapped

a dozen New York counties until the Great Depression intervened and he left to work as a government mapmaker in Washington. Between 1936 (after his patent had expired) and 1940, some Ithaca businessmen validated the concept by making Compass System maps for half the state's counties-

Mastered by the Clock Mark M. Smith, 2000-11-09  
Mastered by the Clock is the first work to explore the evolution of clock-based time consciousness in the American South. Challenging traditional assumptions about the plantation economy's reliance on a premodern, nature-based conception of time, Mark M. Smith shows how and why southerners--particularly masters and their slaves--came to view the clock as a legitimate arbiter of time. Drawing on an extraordinary range of eighteenth- and nineteenth-century archival sources, Smith demonstrates that white southern slaveholders began to incorporate this new sense of time in the 1830s. Influenced by colonial merchants' fascination with time thrift, by a long-held familiarity with urban, public time, by the transport and market revolution in the South, and by their own qualified embrace of modernity, slaveowners began to purchase timepieces in growing numbers, adopting a clock-based conception of time and attempting in turn to instill a similar consciousness in their slaves. But, forbidden to own watches themselves, slaves did not internalize this idea to the same degree as their masters, and slaveholders found themselves dependent as much on the whip as on the clock when enforcing slaves' obedience to time. Ironically,

Smith shows, freedom largely consolidated the dependence of masters as well as freedpeople on the clock.

Discovery of Longitude, The Joan Marie Galat, 2012-09-14 Scientific discovery changes the world! Discover the fascinating story behind one of the most important changes to nautical navigation in this nonfiction book for young readers. More than 300 years ago, explorers wandered the seas using unreliable maps. What they needed to know was the longitude of their locations, but for that they needed accurate time keeping. Unfortunately, no accurate source of time measurement at sea existed. In 1714 the British government decided to offer a reward to anyone who could solve the problem. Learned men and great thinkers alike tried unsuccessfully to work out a solution. They declared it unsolvable! Carpenter John Harrison was intrigued; he thought he might have a solution. He worked for years to design a clock that functioned accurately at sea, even though no one believed he could do it. Even after his timepiece was demonstrated effective at sea, he was still not acknowledged for his ingenious solution. It took many years and intervention by the king to grant Harrison the recognition and reward he deserved for solving the problem of how to accurately track longitude and for winning the British government prize. The book offers a detailed map of the world at that time and

includes the advancements in the use of longitude since then.
