honestly what i have

seen people do is do a simple sum of squared differences between one frame and another to compare similarity you take your colour components whether it be rgb yuv etc for each pixel see more

 usually you use one i frame and denote this as the reference frame once you use this for each 8 x 8 block that s in your reference frame you take a look at the next frame

and figure out where this 8 x 8 block best moved in this next frame you describe this displacement as a motion vector and you construct see more
