At stake: the fate of the future, the fate of Earth—all the Earths. A messianic blue fox who slips through warrens of time and space on a mysterious mission. A raving madman who wanders the desert lost in the past, haunted by his own creation: an invisible monster whose name he has forgotten and whose purpose remains hidden.

Technology Entrepreneurship ,2000

Promises to Keep William W. Fisher, III,2004 During the past fifteen years, changes in technology have generated an extraordinary array of new ways in which music and movies can be produced and distributed. Both the creators and the consumers of entertainment products stand to benefit enormously from the new systems. Sadly, we have failed thus far to avail ourselves of these opportunities. Instead, much energy has been devoted to interpreting or changing legal rules in hopes of defending older business models against the threats posed by the new technologies. These efforts to plug the multiplying holes in the legal dikes are failing and the entertainment industry has fallen into crisis. This provocative book chronicles how we got into this mess and presents three alternative proposals--each involving a combination of legal reforms and new business models--for how we could get out of it.

Harboring Data Andrea M. Matwyshyn,2009-10-06 As identity theft and corporate data vulnerability continue to escalate, corporations must protect both the valuable consumer data they collect and their own intangible assets. Both Congress and the states have passed laws to improve practices, but the rate of data loss persists unabated and companies remain slow to invest in information security. Engaged in a bottom-up investigation, *Harboring Data* reveals the emergent nature of data leakage and vulnerability, as well as some of the areas where our current regulatory frameworks fall short. With insights from leading academics, information security professionals, and other area experts, this original work explores the business, legal, and social dynamics behind corporate information leakage and data breaches. The authors reveal common mistakes companies make, which breaches go unreported despite notification statutes, and surprising weaknesses in the federal laws that regulate financial data privacy, children's data collection, and health data privacy. This forward-looking book will be vital to meeting the increasing information security concerns that new data-intensive business models will have.

Ethics and Electronic Information Barbara Rockenbach,Tom Mendina,2015-10-03 Stephen Almagno's career as a professor of library science began at the University of Pittsburgh in 1971. In 1990, he became the first professor in the United States to teach an information ethics course in a library and information science program. Almagno's work in the area of information ethics was recognized at the 2001 "Ethics of Electronic Information in the 21st Century" symposium held at the University of Memphis on October 18-21, 2001, upon the occasion of his retirement from the University of Pittsburgh. The essays in this book were presented at the symposium honoring Almagno. The first section of the book features papers that pay special tribute to Almagno. The second contains papers on library issues and ethics, such as the ethics of electronic information in China and eastern Europe, the organizations that represent information professionals, the ethics of user privacy in the digital library, and ethical implications of e-commerce, to name just a few. The third section covers topical issues, such as Internet plagiarism, ethical hacking and the security justification, social democracy and information media policy, and the ethics of dialogue, among others.

Standards and Public Policy Shane Greenstein,Victor Stango,2006-12-21 Technological standards are a cornerstone of the modern information economy, affecting firm strategy, market performance and, by extension, economic growth. While there is general agreement that swift movement to superior technological standards is a worthwhile goal, there is much less agreement on the central policy questions: do markets choose efficient standards? How do standards organizations affect the development of standards? And finally, what constitutes appropriate public policy toward standards? In this volume, leading researchers in public policy on standards, including both academics and industry experts, focus on these key questions. Given the dearth of applied work on standards and public policy, this volume significantly advances the frontier of knowledge in this critical but understudied area. It will be essential reading for academic and industrial researchers as well as policymakers.

Access Controlled Ronald Deibert,John Palfrey,Rafal Rohozinski,Jonathan Zittrain,2010-04-02 Reports on a new generation of Internet controls that establish a new normative terrain in which surveillance and censorship are routine. Internet filtering, censorship of Web content, and online surveillance are increasing in scale, scope, and sophistication around the world, in democratic countries as well as in authoritarian states. The first generation of Internet controls consisted largely of building firewalls at key Internet gateways; China's famous "Great Firewall of China" is one of the first national Internet filtering systems. Today the new tools for Internet controls that are emerging go beyond mere denial of information. These new techniques, which aim to normalize (or even legalize) Internet control, include targeted viruses and the strategically timed deployment of distributed denial-of-service (DDoS) attacks, surveillance at key points of the Internet's infrastructure, take-down notices, stringent terms of usage policies, and national information shaping strategies. *Access Controlled* reports on this new normative terrain. The book, a project from the OpenNet Initiative

(ONI), a collaboration of the Citizen Lab at the University of Toronto's Munk Centre for International Studies, Harvard's Berkman Center for Internet and Society, and the SecDev Group, offers six substantial chapters that analyze Internet control in both Western and Eastern Europe and a section of shorter regional reports and country profiles drawn from material gathered by the ONI around the world through a combination of technical interrogation and field research methods.
