The Coin Toss Stefan Hollos, J. Richard Hollos, 2012-11-20 The coin toss is really just a metaphor for a random event that has only two possible outcomes. The actual tossing of a real coin is just one way to realize such an event. There are many examples of questions that are equivalent to a coin toss. For example: Will the stock market close up or down tomorrow? Will a die roll come up with an even or odd number? Will we make contact with extraterrestrials within the next ten years? Will a car drive by in the next minute? Will tomorrow be sunny or cloudy? Will my medical test result be negative or positive? Will I enjoy this movie? Will the next joke be funny? Will the Earth's average temperature go up next year? Because a coin toss is equivalent to such a wide variety of questions, the results in this book are widely applicable. Because the coin toss is the simplest random event you can imagine, many questions about coin tossing can be asked and answered in great depth. The simplicity of the coin toss also opens the road to more advanced probability theories dealing with events with an infinite number of possible outcomes. This book is very mathematical. Some knowledge of calculus, discrete math, and generating functions is helpful to get the most out of it. A review of discrete math is provided in the index,

The FLIP of a COIN Guy Logsdon Books, Guy William Logsdon, 2010-12-20 The life of Tommy Allsup a great multi-genre guitarist who played the first lead guitar on a Buddy Holly recording, and as a Cricket on February 3 1959 in Clear Lake, Iowa, Tommy finally flipped a coin with Richie Valens, for Valens wanted to take Tommy's place on the fateful plane that crashed and killed Buddy Holly and others. Tommy lost, but won. He became a major record producer, a session man on 6500 recording sessions, a Grammar Music Award winner, the organizer of The Original Texas Playboys and many other outstanding activities and accomplishments in western swing, rock and roll and popular music. He is an Oklahoman of Cherokee Indian descent who has lived in Texas, Los Angeles and Nashville.

Metaphysical Essays John Hawthorne, 2006-04-06 John Hawthorne is widely regarded as one of the finest philosophers working today. He is perhaps best known for his contributions to metaphysics, and this volume collects his most notable papers in this field. Hawthorne offers original treatments of fundamental topics in philosophy, including identity, ontology, vagueness, and causation. Six of the essays appear here for the first time, and there is a valuable introduction to guide the reader through the selection.

Worldviews, Science and Us Robrecht Vanderbeeken, Bart D'Hooghe, 2010 This volume brings together the lectures presented at the 5th Metaphysics of Science Workshop held from June 2 to 3, 2005, in Ghent, Belgium. The aim of this volume is twofold. First, it fields a selection of ongoing discussions on a central topic in contemporary analytical metaphysics. Authors were asked to encapsulate their lecture topic into a précis, highlighting the contesting views, accentuating the pro and contra of the main arguments, and shedding light on the origin, the evolution and the eventual offspring of a respective discussion. Second, this volume addresses the methodological question by examining what can be learned if we compare these discussions from a methodological perspective. What are the red herrings and shortcomings? Is an integrated methodology possible? Does each discussion finally await a pluralism of plausible positions or will an overall convincing account be expected? And finally, can analytical metaphysics methodologically assert and investigate their basic assumptions, if not from a common sense stance?

Modal Translation: The Relevance of Worlds Paul Hanmer, 2023-06-06 This book concerns the philosophical analysis of modal sentences. David Lewis' Modal Translation Scheme translates sentences of quantified modal logic into sentences of predicate logic supplemented by counterpart theory. A number of theoretical advantages are thereby secured. One component of the translation scheme makes reference to non-actual but possible worlds i.e. the primitive predicate "at a world(s), w". The author addresses the problem of advanced modal sentences which threaten this predicate and so the ability of genuine realism to secure the aforementioned theoretical benefits. The problem of advanced modal sentences is a relatively new field of philosophical research. This ground-breaking book will primarily be of interest to researchers in modality, particularly those working in this field.

Probabilistic Machine Learning for Finance and Investing Deepak K. Kanungo, 2023-08-14 Whether based on academic theories or discovered empirically by humans and machines, all financial models are at the mercy of modeling errors that can be mitigated but not eliminated. Probabilistic ML technologies are based on a simple and intuitive definition of probability and the rigorous calculus of probability theory. Unlike conventional AI systems, probabilistic machine learning (ML) systems treat errors and uncertainties as features, not bugs. They quantify uncertainty generated from inexact model inputs and outputs as probability distributions, not point estimates. Most importantly, these systems are capable of forewarning us when their inferences and predictions are no longer useful in the current market environment. These ML systems provide realistic support for financial decision-making and risk management in the face of uncertainty and incomplete information. Probabilistic ML is the next generation ML framework and technology for AI-powered financial and investing systems for many reasons. They are generative ensembles that learn continually from small and noisy financial datasets while seamlessly enabling probabilistic inference, prediction and counterfactual reasoning. By moving away from flawed statistical methodologies (and a restrictive conventional view of probability as a limiting frequency), you can embrace an intuitive view of probability as logic within an axiomatic statistical framework that comprehensively and successfully quantifies uncertainty. This book shows you why and how to make that transition.

CONCUR 2006 – Concurrency Theory Christel Baier, Holger Hermanns, 2006-08-03 This book constitutes the refereed proceedings of the 17th International Conference on Concurrency Theory, CONCUR 2006, held in Bonn, Germany in August 2006. The 29 revised full papers presented together with 5 invited papers were carefully reviewed and selected from 101 submissions. The papers are organized in topical sections on model checking, process calculi, minimization and equivalence checking, types, semantics, probability, bisimulation and simulation, real time, and formal languages.

Extrasensory Perception [2 volumes] Edwin C. May, Sonali Bhatt Marwaha, 2015-06-23 Scholars from around the world collaborate to explain the history of parapsychology, the study of extrasensory perception (ESP), and the arguments of skeptics and supporters in this fascinating collection. This two-volume set introduces ESP—also known as anomalous cognition—and psychokinesis, addressing the history, research, philosophy, and scientific theories surrounding the phenomena. With contributions from

leading research scientists from within the field of parapsychology and other areas of study, this reference addresses the fundamental questions that the evidence of ESP evokes; examines parapsychology research from all over the world; and explores the controversies, skepticism, and contemporary criticism disparaging the field. Written for a multidisciplinary audience ranging from physicists to psychologists to lay persons, the volumes present the scientific validity of the field. Volume 1 addresses the historical, philosophical, skeptical, and research viewpoints; volume 2 lays out the current theories on ESP. Chapters reveal how strict scientific protocols and state-of-the-art technologies enable scientists—at sites such as Harvard and Cornell universities to their international counterparts in Amsterdam, Austria, and Asia—to pinpoint and investigate ESP abilities. Appendices include a glossary of key terms in parapsychology, ESP research protocol, ESP research organizations, skeptic associations, and recommended reading.

Games Youth Specialties, 2010-06-01 You want whacked-out, run-till-you-drop games? Here they are. You want sedate games for small, quiet groups? Got 'em. Inside Games are more than 400 indoor and outdoor games teenagers love to play: - Balloon Games . . . Twice the fun of a church board meeting, with only half the hot air. An inexpensive good time. - Basketball Games . . . All of them slam dunks. - Volleyball Games . . . What self-respecting youth group doesn't love a good volleyball game? They'll go crazy for these bizarre mutations of the sport. - Indoor Games for Large Groups . . . Reserve your church's gym or fellowship hall for the night, and turn to page 35 for this collection of games! - Living Room Games . . . Great for parties, informal gatherings -- or anytime you've got a roomful of people just sitting around. And more -- indoor games for small groups, mind reading games, and dozens of Ping-Pong variations. Whether you're a youth worker or a recreation leader at a church, school, club, or camp -- Games is your storehouse of proven, youth-group tested ideas.

A Gambling Guide Nicolae Sfetcu, 2014-05-03 Gambling as a betting action - wagering money or something of material value on an event with an uncertain outcome with the primary intent of winning additional money or material goods. A guide about what is gambling (with a special section for online gambling), casino games with both beatable casino games (poker, blackjack, video poker with progressive jackpot, pai gow poker, sports betting, horse racing - parimutuel, slot machines and other gambling machines) and unbeatable casino games (baccarat, craps, roulette, keno, casino war, faro, pachinko, sic bo, let it ride, 3-card poker, 4-card poker, red dog, Caribbean stud poker, etc.), and non-casino gambling games (bingo, lottery, mahjong, backgammon, bridge, etc.). Fixed-odds gambling in sports is also present in this book with horse racing, greyhound racing, football (particularly association football, American football and rugby), golf, tennis, cricket, baseball, basketball, ice hockey, snooker, motor sports, boxing, darts, cross-country skiing and biathlon. Please, don't forget to take a look to the legality of the gambling and online gambling, as well as to the articles, warnings and links dedicated to the gambling addiction. Extreme cases of problem gambling may cross over into the realm of mental disorders.

Knowledge and Lotteries John Hawthorne, 2003-11-20 Knowledge and Lotteries is organized around an epistemological puzzle: in many cases, we seem consistently inclined to deny that we know a certain class of propositions, while crediting ourselves with knowledge of propositions that imply them. In its starkest form, the puzzle is this: we do not think we know that a given lottery ticket will be a loser, yet we normally count ourselves as knowing all sorts of ordinary things that entail that its holder will not suddenly acquire a large fortune. After providing a number of specific and general characterizations of the puzzle, Hawthorne carefully examines the competing merits of candidate solutions. In so doing, he explores a number of central questions concerning the nature and importance of knowledge, including the relationship of knowledge to assertion and practical reasoning, the status of epistemic closure principles, the merits of various brands of scepticism, the prospects for a contextualist account of knowledge, and the potential for other sorts of salience-sensitive accounts. Along the way, he offers a careful treatment of pertinent issues at the foundations of semantics. His book will be of interest to anyone working in the field of epistemology, as well as to philosophers of language.

Computing with Data Guy Lebanon, Mohamed El-Geish, 2018-11-28 This book introduces basic computing skills designed for industry professionals without a strong computer science background. Written in an easily accessible manner, and accompanied by a user-friendly website, it serves as a self-study guide to survey data science and data engineering for those who aspire to start a computing career, or expand on their current roles, in areas such as applied statistics, big data, machine learning, data mining, and informatics. The authors draw from their combined experience working at software and social network companies, on big data products at several major online retailers, as well as their experience building big data systems for an AI startup. Spanning from the basic inner workings of a computer to advanced data manipulation techniques, this book opens doors for readers to quickly explore and enhance their computing knowledge. Computing with Data comprises a wide range of computational topics essential for data scientists, analysts, and engineers, providing them with the necessary tools to be successful in any role that involves computing with data. The introduction is self-contained, and chapters progress from basic hardware concepts to operating systems, programming languages, graphing and processing data, testing and programming tools, big data frameworks, and cloud computing. The book is fashioned with several audiences in mind. Readers without a strong educational background in CS--or those who need a refresher--will find the chapters on hardware, operating systems, and programming languages particularly useful. Readers with a strong educational background in CS, but without significant industry background, will find the following chapters especially beneficial: learning R, testing, programming, visualizing and processing data in Python and R, system design for big data, data stores, and software craftsmanship.
