Determining Core Capabilities in Chemical and Biological Defense Science and Technology National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Board on Chemical Sciences and Technology, Committee on Determining Core Capabilities in Chemical and Biological Defense Research and Development, 2013-01-13 The goal of the U.S. Department of Defense's (DoD's) Chemical and Biological Defense Program (CBDP) is to provide support and world-class capabilities enabling the U.S. Armed Forces to fight and win decisively in chemical, biological, radiological, and nuclear (CBRN) environments. To accomplish this objective, the CBDP must maintain robust science and technology capabilities to support the research, development, testing, and evaluation required for the creation and validation of the products the program supplies. The threat from chemical and biological attack evolves due to the changing nature of conflict and rapid advances in science and technology (S&T), so the core S&T capabilities that must be maintained by the CBDP must also continue to evolve. In order to address the challenges facing the DoD, the Deputy Assistant Secretary of Defense (DASD) for Chemical and Biological Defense (CBD) asked the National Research Council (NRC) to conduct a study to identify the core capabilities in S&T that must be supported by the program. The NRC Committee on Determining Core Capabilities in Chemical and Biological Defense Research and Development examined the capabilities necessary for the chemical and biological defense S&T program in the context of the threat and of the program's stated mission and priorities. Determining Core Capabilities in Chemical and Biological Defense Science and Technology contains the committee's findings and recommendations. It is intended to assist the DASD CBD in determining the best strategy for acquiring, developing, and/or maintaining the needed capabilities.

The Web Application Hacker's Handbook Dafydd

Stuttard, Marcus Pinto, 2011-03-16 This book is a practical guide to discovering and exploiting security flaws in web applications. The authors explain each category of vulnerability using real-world examples, screen shots and code extracts. The book is extremely practical in focus, and describes in detail the steps involved in detecting and exploiting each kind of security weakness found within a variety of applications such as online banking, e-commerce and other web applications. The topics covered include bypassing login mechanisms, injecting code, exploiting logic flaws and compromising other users. Because every web application is different, attacking them entails bringing to bear various general principles, techniques and experience in an imaginative way. The most successful hackers go beyond this, and find ways to automate their bespoke attacks. This handbook describes a proven methodology that combines the virtues of human intelligence and

computerized brute force, often with devastating results. The authors are professional penetration testers who have been involved in web application security for nearly a decade. They have presented training courses at the Black Hat security conferences throughout the world. Under the alias PortSwigger, Dafydd developed the popular Burp Suite of web application hack tools.

Build Your Immune Resilience Amit Sood MD,2020-03-03

Faced with a threat or uncertainty, you have two options: #1. It is what it is. I can't do much about it. I will wait and see what happens. Or worse, I will let my fear paralyze me. #2. I don't accept inaction. I can do a lot. I won't let fear grip me, will take charge, and maximize my chances of defeating this threat. I like the second option much better. I believe one of the most important things you and I can do today is to bolster our resilience, particularly immune resilience. A strong and intelligent immune system will not only help you better face today's challenges, but it will make you stronger for every future threat that might knock at your door. This book shares the science and art of building your immune resilience.

Debating European Security and Defense Policy Maxime H. A. Larivé,2016-05-13 Dr. Larivé questions whether there is such a thing as a European defense and security policy. This book analyzes the integration process by clearly illustrating to the reader the two sides of the argument in order to understand the complexity of the problems in the different stages of the creation and implementation of the European defense policy. In doing so, this study asks the question of why has the process been so halting and of such limited scope? Structured in three parts: Theories, analyzing the theoretical debates raised by the positivist paradigms of neorealism, liberalism and constructivism on European security; History, reflecting on the impacts of the Cold War, American foreign policy, the 2008 economic crisis, and the evolution of European strategy; and, Actors, by looking at the role

of European institutions, Member States, and the CSDP on the transformation of the European defense policy since 1998. Each chapter is composed of sub questions allowing the reader to grasp the different forces explaining the deepening or lack of the deepening process of the CSDP. Ultimately, this book offers a unique base for fostering discussion, understanding and critical thinking on the CSDP.
