Software Composition Cesare Pautasso,Éric Tanter,2008-03-17 The goal of the International Symposia on Software Composition is to advance the state of the research in component-based software development. We focus on the challenges related to component development, reuse, veri?cation and, of course,composition.Softwarecompositionisbecomingmoreandmoreimportant as innovation in software engineering shifts from the development of individual components to their reuse and recombination in novel ways. To this end, for the 2008 edition, researchers were solicited to contribute on topics related to component adaptation techniques, composition languages, calculi and type systems, as well as emerging composition techniques such as aspect-oriented programming, service-oriented architectures, and mashups. In line with previous editions of SC, contributions were sought focusing on both theory and practice, with a particular interest in e?orts relating them. This LNCS volume contains the proceedings of the 7th International S- posium on Software Composition, which was held on March 29–30, 2008, as a satellite event of the European Joint Conferences on Theory and Practice of Software (ETAPS), in Budapest, Hungary. We received 90 initial submissions from all over the world, out of which 70 were considered for evaluation by a Program Committee consisting of 30 - ternational experts. Among these submissions, we selected 13 long papers and 6 short papers to be included in the proceedings and presented at the conf- ence. Each paper went through a thoroughrevisionprocess and was reviewedby three to ?ve reviewers. This ensured the necessary quality for publishing these proceedings in time for the event, a ?rst in the history of the symposium.

Software Engineering for Self-Adaptive Systems Betty H. C. Cheng,Rogério de Lemos,Paola Inverardi,Jeff Magee,2009-06-10 Although the self-adaptability of systems has been studied in a wide range of disciplines, from biology to robotics, only recently has the software engineering community recognized its key role in enabling the development of future software systems that are able to self-adapt to changes that may occur in the system, its requirements, or the environment in which it is deployed. The 12 carefully reviewed papers included in this state-of-the-art survey originate from the International Seminar on Software Engineering for Self-Adaptive Systems, held in Dagstuhl Castle, Germany, in January 2008. They examine the current state-of-the-art in the field, describing a wide range of approaches coming from different strands of software engineering, and present future challenges facing this ever-resurgent and challenging field of research. Also included in this book is an invited roadmap paper on the research challenges facing self-adaptive systems within the area of software engineering, based on discussions at the Dagstuhl Seminar and put together by several of its participants. The papers have been divided into topical sections on architecture-based self-adaptation, context-aware and model-driven self-adaptation, and self-healing. These are preceded by three research roadmap papers.

Citizen, Customer, Partner John Clayton Thomas,2014-12-18 For almost a half a century, scholars and practitioners have debated what the connections should be between public administration and the public. Does the public serve principally as citizen-owners, those to whom administrators are responsible? Are members of the public more appropriately viewed as the customers of government? Or, in an increasingly networked world, do they serve more as the partners of public administrators in the production of public services? This book starts from the premise that the public comes to government not principally in one role but in all three roles, as citizens and customers and partners. The purpose of the book is to address the dual challenge that reality implies: (1) to help public administrators and other public officials to understand the complex nature of the public they face, and (2) to provide recommendations for how public administrators can most effectively interact with the public in the different roles. Using this comprehensive perspective, Citizen, Customer, Partner helps students, practitioners, and scholars understand when and how the public should be integrated into the practice of public administration. Most chapters in Citizen, Customer, Partner include multiple boxed cases that illustrate the chapter's content with real-world examples. The book concludes with an extremely useful Appendix that collects and summarizes the 40 Design Principles — specific advice for public organizations on working with the public as customers, partners, and citizens.

Crew Resource Management Earl L. Wiener,Barbara G. Kanki,Robert L. Helmreich,2010-01-20 The new edition of Crew Resource Management continues to focus on CRM in the cockpit, but also emphasizes that the concepts and training applications provide generic guidance and lessons learned for a wide variety of crews in the aviation system as well as in the complex and high-risk operations of many non-aviation settings. Long considered the bible in this field, much of the basic style and structure of the previous edition of Crew Resource Management is retained in the new edition. Textbooks are often heavily supplemented with or replaced entirely by course packs in advanced courses in the aviation field, as it is essential to provide students with cutting edge information from academic researchers, government agencies (FAA), pilot associations, and technology (Boeing, ALION). This edited textbook offers ideal coverage with first-hand information from each of these perspectives. Case examples, which are particularly important given the dangers inherent in real world aviation scenarios, are liberally supplied. An image collection and test bank make this the only text on the market with ancillary support. New material includes: international and cultural aspects of CRM; design and implementation of Line-Oriented Flight Training (LOFT); airline applications beyond the cockpit; spaceflight resource management; non-aviation applications; AQP; LOSA; and special issues pertaining to low-cost airline carriers. The second edition editors offer essential breath of experience in aviation human factors from multiple perspectives (academia, government, and private enterprise) and the contributors have all been chosen as experts in their fields who represent the diversity of the research of activities and organisational experience of CRM. The only CRM text on the market offering an up-to-date synthesis of primary source material New edition thoroughly updated and revised to include major new findings, complete with discussion of the international and cultural aspects of CRM, the design and implementation of LOFT Instructor website with testbank and image collection Liberal use of case examples
