Improving Decision Making in Organisations Alan G. Lockett, Gerd Islei, 2012-12-06 MCDM has been an active research area for over 20 years and the previous conferences clearly showed a tremendous growth of interest. A variety of successful applications and recent developments of interactive computer software to support decision making confirm a sustained progress. We therefore decided to make our theme Improving Decision Making in Organisations. The aim was to take stock of the impact of multicriteria concepts in organisations and to involve management practitioners from a wide range of backgrounds. To this end the conference was organised round five broad themes and papers were solicited on the following topics:- Psychology - how do individuals in practice use and relate to the methodologies. Organisation - how do our models fit into the decision making framework of real organisations. Application - how have the models been used in practice and what is the users view. Methodology - what are the new areas in model development. Related Areas - is there complementary work eg. Expert Systems which may be attempting to solve very similar problems. The call for papers produced an overwhelming response of over 100 papers. They were from a variety of disciplines and applications, and we decided to devote approximately one day to each of the five areas. We are very impressed by the results which can be seen in this edited proceedings.

Toward Interactive and Intelligent Decision Support Systems Yoshikazu Sawaragi, Koichi Inoue, Hirotaka Nakayama, 2012-12-06 These proceedings include papers presented at the VII-th International Conference on Multiple Criteria Decision Making which was held in Kyoto/Japan on August 18-22, 1986. Multiple Criteria Decision Making (MCDM) has been a greatly important subject in many practical fields, for example, in planning, design, control and management in both private and public sectors. After remarkable developments of theory, methodology and pilot case studies in recent years, it is now facing the stage of real applications and development of more sophisticated methodology as interactive intelligent decision support systems. The conference aimed to provide a significant contribution to the future of MCDM as one of total systems including human factors. Substantial emphasis was given to knowledge engineering and cognitive science. The conference inherits the tradition and the style of the previous conferences: (1) Jouy-en-Josas/France (1975), (2) Buffalo/U.S.A. (1977), (3) Konigswinter/FRG (1978), (4) Delaware/U.S.A. (1980), (5) Mons/Belgium (1982), (6) Cleveland/U.S.A. (1984). This time a great many Japanese companies provided grants for the conference. As a result, the total number of participants was over 120, and a computer demonstration could be realized on an extensive scale as well as the conference sessions. Throughout the conference, it was observed that MCDM is making steady progress not only in theory but also as a tool for decision support.

Human-Centric Decision-Making Models for Social Sciences Peijun Guo, Witold Pedrycz, 2013-11-01 The volume delivers a wealth of effective methods to deal with various types of uncertainty inherently existing in human-centric decision problems. It elaborates on comprehensive decision frameworks to handle different decision scenarios, which help use effectively the explicit and tacit knowledge and intuition, model perceptions and preferences in a more human-oriented style. The book presents original approaches and delivers new results on fundamentals and applications related to human-centered decision making approaches to business, economics and social systems. Individual chapters cover multi-criteria (multiattribute) decision making, decision making with prospect theory, decision making with incomplete probabilistic information, granular models of decision making and decision making realized with the use of non-additive measures. New emerging decision theories being presented as along with a wide spectrum of ongoing research make the book valuable to all interested in the field of advanced decision-making. The volume, self-contained in its nature, offers a systematic exposure to the concepts, design methodologies, and detailed algorithms. A prudent balance between the theoretical studies and applications makes the material suitable for researchers and graduate students in information, computer sciences, psychology, cognitive science, economics, system engineering, operation research and management science, risk management, public and social policy.

Multiple Criteria Decision Making G.H. Tzeng, H.F. Wang, U.P. Wen, P.L. Yu, 2012-12-06 It was a great honor and privilege to organize the Tenth International Conference on Multiple Criteria Decision Making at Taipei, Taiwan, July 19-24, 1992. Accompanying this unique honor and privilege there was a series of complex, challenging problems. Each of them involved multiple criteria, fuzziness, uncertainty, unknown yet dynamic changes. The problem sometimes cost us sleep because we wanted to do the very best job, but in reality it seemed to be impossible. The following are the main goals of the organization committee: (i) inviting all prominent and distinguished MCDM scholars around the world to participate in the conference and to present their up-to-date research results, (ii) providing financial aid and hospitality so that each invited speaker can have free room and board at a five star hotel, (iii) creating an environment so that all participants can freely exchange their ideas, and build friendships around the world. Due to the enthusiastic participation of the prominent scholars, the generous support of the Taiwan government, universities, the Industrial leaders and nonprofit foundations, and the active problem solving attitude and doing of the organizational committee and the Habitual Domain (HD) club, the conference was a great success.

The Dynamic Decision Maker Michael J. Driver, Kenneth R. Brousseau, Phillip L. Hunsaker, 1998 The insights offered in this book are intended to guarantee the reader a more successful career. It is written especially for managers and executives whose jobs require managing people successfully, but it is also written for anyone who must make decisions that involve other people. The authors discuss the decision styles and habits that people form and how to change decision-making habits where necessary. The models and techniques for decision making presented here have been used throughout the world in all kinds of businesses and government agencies. Decision style concepts can benefit anyone, from a new management trainee or MBA student to the CEO of a large firm.

The Adaptive Decision Maker John W. Payne, James R. Bettman, Eric J. Johnson, 1993-05-28 Demonstrates how decision makers balance effort and accuracy considerations and predict the particular choice of strategy.

Good Decision Bad Decision Anil K. Choudhary, 2014-04 Decision making appears to be a simple activity but the process leading to a decision is quite complex. Unique aspect of decision making is that it is always done in advance but people weigh it in hindsight. Therefore, predicting a decision to be right or wrong at the time of decision making is always as good a guess as is the decision itself. What is required at this stage is to understand the factors that may be impacting the decision maker and then accept or reject the decision being taken then and there. On the contrary, people tend to judge a decision as good or bad after the outcome is known which, in author's view, is not fair to the decision-maker. Success of a decision is not in it being good or bad, right or wrong, but being accepted when it is taken and not after knowing the outcome. Author believes that acceptance of a decision is of far greater significance than the decision itself, as unless accepted, a decision has no relevance. People not only accept or reject decision made by others but also by self. If you thought accepting other's decision is more difficult then think again; you would be surprised that many times accepting own decision is far more difficult. Actually when others make a decision, we can debate it, criticize it, pass on judgment but in almost all cases we forget it after sometime. However, when we make a decision, we consciously or unconsciously, keep deliberating and judging it for a long time. Accepting or rejecting our own decision impacts our behaviour more than when we accept or reject decision made by others and this influences our future actions towards every new situation. An important aspect in the process is segregating decision-maker and decision-acceptor. The acceptor of the decision has to have faith in the decision-maker and be aware of the factors that the decision-maker has taken into consideration while arriving at the decision. When others are taking decision, this is much easier but when one takes decision where he is also a significantly impacted stakeholder of the decision, this becomes really difficult. In fact people tend to swing between the role of a decision-maker and decision-acceptor throughout the process. As a decision-maker, you should only worry about coming out with the most appropriate decision to meet the expected outcome using your knowledge, available information, and other such factors. As a decision-acceptor you should be focused on knowing the decision-maker and various factors that he has used to arrive at the decision. If you are convinced with that, you should accept the decision without really worrying about the outcome. This book is an attempt to bring in awareness about some key factors that influences decision making so that the stakeholders become better acceptors of a decision while it is being taken irrespective of the outcome. Let us always remember Decision is just a decision at the time it is made, it is neither good nor bad.

Multiple Criteria Decision Making and Risk Analysis Using Microcomputers Birsen Karpak, Stanley Zionts, 2013-06-29 Roughly nine years ago, the two editors met for the first time in Amsterdam, the Netherlands at the EURO III meeting (organized by the Association of European Operational Research Societies) there. As a result of our initial meeting, the two of us planned and carried out a number of activities in the multiple criteria decision making area, much of it supported by the North Atlantic Treaty Organization (NATO). The latest of these activities was a NATO Advanced Study Institute (ASI) on multiple criteria. decision making and risk analysis using microcomputers. The institute was held in Tarabya, Istanbul, TURKEY, on June 28 - July 8, 1987. We received over 100 applications from professors (and a few graduate students) in 13 countries. Roughly half of them were able to participate. The ASI was a great success! Substantial knowledge transfer and learning took place. In addition to the planned presentations, we had several panels and round table discussions. Though we had planned these in advance, we implemented them to fit the occasion, and also organized a few special sessions on site to respond to participants' interests.

Multiple Criteria Decision Making in the New Millennium Murat Köksalan, Stanley Zionts, 2012-12-06 This volume contains a collection of papers presented at the 15th International Conference on Multiple Criteria Decision Making held in Ankara, Turkey July 10-14, 2000. This was one of the regular conferences of the International Society on Multiple Criteria Decision Making, which are held at approximately two-year intervals. The Ankara conference had 195 participants from 38 countries. A total of 185 papers were presented at the conference. The title of our volume is MCDM in the New Millennium. The papers presented at the conference reflect the theme. We had several papers on information technology (IT) and many application papers. Of the 81 application papers presented, 14 appear in the volume. We expect more IT applications of MCDM to appear in the future, in particular in the areas of e-commerce and the internet. The conference surroundings and accommodations were excellent, and conducive to both an outstanding academic exchange, and enjoyment and a cultural broadening of participants. We had a pleasant and enjoyable outing and visit to the Anatolian Civilizations Museum. We also had an outstanding banquet at which awards were presented. The MCDM Gold Medal was presented to Professor Thomas Saaty, of the University of Pittsburgh. The MCDM Presidential Service Award was presented to Professor Pekka Korhonen of the Helsinki School of Economics for his years of presidential service to the society. The society presented the MCDM Edgeworth-Pareto Award to Professor Alexander V. Lotov of the Russian Academy of Sciences.

Decisions, Decisions David A. Welch, 2009-12-02 You're tempted to accept a promising job offer in another city, but moving would entail considerable sacrifice on the part of your family. What should you do? Your elderly mother can no longer take care of herself but she doesn't get along with your husband and dreads the prospect of moving into a nursing home. What is the solution? Whether you are faced with decisions momentous or trivial, how you go about resolving everyday dilemmas will definitely affect your level of satisfaction in life. In this engrossing and entertaining guide, David Welch, who has studied the decision-making process at the highest levels, shows how both the science and the art of decision-making are essential to us all. Welch lays out nine steps to effective decision-making and then demonstrates how to apply these steps to real-world situations. He gives readers the intellectual tools to assess their strengths and weaknesses and stresses that self-knowledge is critical for making the right decisions. This enjoyable, clearly written guide will enable decision-makers at every level to find the best possible solution for dilemmas both big and small.

Handbook of Behavioural Economics and Smart Decision-Making Morris Altman, 2017-05-26 This Handbook is a unique and original contribution of over thirty chapters on behavioural economics, examining and addressing an important stream of research where the starting assumption is that decision-makers are for the most part relatively smart or rational. This particular approach is in contrast to a theme running through much contemporary work where individuals' behaviour is deemed irrational, biased, and error-prone, often due to how people are hardwired. In the smart people approach, where errors or biases occur and when social dilemmas arise, more often than not, improving the decision-making environment can repair these problems without hijacking or manipulating the preferences of decision-makers. This book covers a wide-range of themes from micro to macro, including various sub-disciplines within economics such as economic psychology, heuristics, fast and slow-thinking, neuroeconomics, experiments, the capabilities approach, institutional economics, methodology, nudging, ethics, and public policy.

The Practical Decision Maker Thomas R. Harvey, Sharon M. Corkrum, Shari L. Fox, David C. Gustafson, Deanna K. Keulian, 2022-07-11 The Practical Decision Maker identifies six steps essential to strong decision-making. Mind-set, problem definition, solution criteria, possible solutions, solution choice, and implementation are depicted along with concrete examples of each. 53 structuring devices are included to help readers move through each step of the decision-making process.

Forming Winning Strategies Po L. Yu, 2012-12-06 Sooner or later, people develop a fairly stable set of ways for thinking, judging and responding; this is called one's habitual domain. Our habitual domains (HDs) grow and go wherever we go and have great impact on our behavior and decision making. When we are vital and growing our HDs are expanding and flexible; and when we find ourselves in ruts, not growing, it is because our HDs have become rigid and inflexible, as in death. This book discusses all aspects of habitual domains: their foundations, expansion, dynamics and applications to various nontrivial decision problems in our lives, including effective decision making, effective goal setting, cooperation, conflict resolution, negotiation and career management. Based on an integration of psychology, system science, management and common sense and wisdom, the book provides a simple but unified set of tools in terms of habitual domains and the behavior mechanism. The tools can be applied to expand and sharpen our capacity for knowing ourselves, our coworkers, our rivals, and our environments, and to form winning strategies for solving our problems. To make the book fun to read and the concepts introduced easy to understand and apply, the book is written in plain language with many lively and interesting examples as illustrations. The first half of the book focuses on general descriptions of the behavior mechanism and habitual domains, the second half on applications.

Collective Decision-Making: Norman Schofield, 2013-03-09 In the last decade the techniques of social choice theory, game theory and positive political theory have been combined in interesting ways so as to provide a common framework for analyzing the behavior of a developed political economy. Social choice theory itself grew out of the innovative attempts by Kenneth Arrow (1951) and Duncan Black (1948, 1958) to extend the range of economic theory in order to deal with collective decision-making over public goods. Later work, by William Baumol (1952), and James Buchanan and Gordon Tullock (1962), focussed on providing an economic interpretation of democratic institutions. In the same period Anthony Downs (1957) sought to model representative democracy and elections while William Riker (1962) made use of work in cooperative game theory (by John von Neumann and Oscar Morgenstern, 1944) to study coalition behavior. In my view, these rational choice analyses of collective decision-making have their antecedents in the arguments of Adam Smith (1759, 1776), James Madison (1787) and the Marquis de Condorcet (1785) about the design of political institutions. In the introductory chapter to this volume I briefly describe how some of the current normative and positive aspects of social choice date back to these earlier writers.

It contains papers dealing with: Multiple Criteria Decision Making; Social and Human System Management; and Information, Knowledge and Wisdom Management.

Social Consciousness in Legal Decision Making Richard L. Wiener,Brian H. Bornstein,Robert Schopp,Steven L. Willborn,2007-05-11 This book invites the legal and psychology communities to work together in solving some of our most pressing social problems. It examines four controversial areas involving people’s perceptions of others. The book is therefore a guide to understanding the valuable contribution of social scientific research in policy formulation in the law, and it addresses the role of psychology in substantive law and legal decision making.
