Anaerobic Digestion Model No.1 (ADM1) IWA Task Group for Mathematical Modelling of Anaerobic Digestion Processes,2002-02-01 The IWA Task Group for Mathematical Modelling of Anaerobic Digestion Processes was created with the aim to produce a generic model and common platform for dynamic simulations of a variety of anaerobic processes. This book presents the outcome of this undertaking and is the result of four years collaborative work by a number of international experts from various fields of anaerobic process technology. The purpose of this approach is to provide a unified basis for anaerobic digestion modelling. It is hoped this will promote increased application of modelling and simulation as a tool for research, design, operation and optimisation of anaerobic processes worldwide. This model was developed on the basis of the extensive but often disparate work in modelling and simulation of anaerobic digestion systems over the last twenty years. In developing ADM1, the Task Group have tried to establish common nomenclature, units and model structure, consistent with existing anaerobic modelling literature and the popular activated sludge models (See Activated Sludge Models ASM1, ASM2, ASM2d and ASM3, IWA Publishing, 2000, ISBN: 1900222248). As such, it is intended to promote widespread application of simulation from domestic (wastewater and sludge) treatment systems to specialised industrial applications. Outputs from the model include common process variables such gas flow and composition, pH, separate organic acids, and ammonium. The structure has been devised to encourage specific extensions or modifications where required, but still maintain a common platform. During development the model has been successfully tested on a range of systems from full-scale waste sludge digestion to laboratory-scale thermophilic high-rate UASB reactors. The model structure is presented in a readily applicable matrix format for implementation in many available differential equation solvers. It is expected that the model will be available as part of commercial wastewater simulation packages. ADM1 will be a valuable information source for practising engineers working in water treatment (both domestic and industrial) as well as academic researchers and students in Environmental

   <u>Modelling Population Dynamics</u> K. B. Newman,S. T. Buckland,B. J. T. Morgan,R. King,D. L. Borchers,D. J. Cole,P. Besbeas,O. Gimenez,L. Thomas,2014-07-16 This book gives a unifying framework for estimating the abundance of open populations: populations subject to births, deaths and movement, given imperfect measurements or samples of the populations. The focus is primarily on populations of vertebrates for which dynamics are typically modelled within the framework of an annual cycle, and for which stochastic variability in the demographic processes is usually modest. Discrete-time models are developed in which animals can be assigned to discrete states such as age class, gender, maturity, population (within a metapopulation), or species (for multi-species models). The book goes well beyond estimation of abundance, allowing inference on underlying population processes such as birth or recruitment, survival and movement. This requires the formulation and fitting of population dynamics models. The resulting fitted models yield both estimates of abundance and estimates of parameters characterizing the underlying processes.

   When Housing Markets Meet Shadow Banking: Bubbles, Mortgages, Securitization, And Fintech Rose Neng Lai,Robert A Van Order,2024-03-06 This book contends that the housing markets and shadow banking have been involved in a kind of 'dance' over the last two decades. It traces this dance to be between the roles of mortgage markets since the 1980s in both the US and China and the developments of securitization and 'shadow banks.' It gives side-by-side comparisons between the two and suggests that house price dynamics have been similar, but also quite different. Both had booms. The US had a bubble that burst around 2007 — after prices became quite high relative to rents and then crashed. However, Chinese housing markets, which had a similar run-up, did not have a burst bubble. Rather, the rising property values appear to have been from space becoming more valuable as reflected in rent growth. In the US, prices chased prices; in China, prices chased rents.Mortgage markets were more complicated, beginning with the securitization in the US, and the rise of shadow banks that both led and followed. The US used shadow banks to hold pieces of securitization deals and funded them with deposit-like debt. These pieces were fragile and their collapse caused 'silent runs,' which were instrumental in the ensuing crash.

China's shadow banks were more like traditional intermediaries, unattached to securitization. Their liabilities were mostly not short-term, as was the case with US shadow banks. So, runs were not a problem, but getting the market to work efficiently was.The markets have evolved. And while the music has changed, the dance is not over.
