The Report: Dubai 2014 Oxford Business Group,2014-01-28 In many respects 2014 marked the transition from strong recovery to promising growth for Dubai. With many exciting projects in the pipeline, not least the hosting of Expo 2020, the emirate is continuing to build on its reputation as a dynamic and international centre for business. Already a regional and global centre for business and finance, Dubai's reputation has been bolstered by the MSCI's decision to upgrade the UAE from frontier to emerging market status in 2014, while the emirate's successful Expo 2020 bid is expected to generate myriad opportunities for private investors across a range of sectors. Construction is thriving once again, driven in large part by strong retail sector growth, with various projects, including plans for the world's largest mall, indicating that the sector will maintain its position as the emirate's biggest GDP contributor moving forward. The transport and logistics framework is set for major expansion in the coming years as well, furthering cementing the emirate's status as a leading transport and logistics hub not just regionally, but globally too. The continued development of Dubai's retail and hospitality offerings, alongside the upgrades to its airports, should help to ensure robust growth in visitor numbers from both the region and further afield.

The Vertical City K. Al-Kodmany,2018-06-25 Each century has its own unique approach toward addressing the problem of high density and the 21st century is no exception. As cities try to cope with rapid population growth - adding 2.5 billion dwellers by 2050 - and grapple with destructive sprawl, politicians, planners and architects have become increasingly interested in the vertical city paradigm. Unfortunately, cities all over the world are grossly unprepared for integrating tall buildings, as these buildings may aggravate multidimensional sustainability challenges resulting in a "vertical sprawl" that could have worse consequences than "horizontal" sprawl. By using extensive data and numerous illustrations this book provides a comprehensive guide to the successful and sustainable integration of tall buildings into cities. A new crop of skyscrapers that employ passive design strategies, green technologies, energy-saving systems and innovative renewable energy offers significant architectural improvements. At the urban scale, the book argues that planners must integrate tall buildings with efficient mass transit, walkable neighbourhoods, cycling networks, vibrant mixed-use activities, iconic transit stations, attractive plazas, well-landscaped streets, spacious parks and engaging public art. Particularly, it proposes the Tall Building and Transit Oriented Development (TB-TOD) model as one of the sustainable options for large cities going forward. Building on the work of leaders in the fields of ecological and sustainable design, this book will open readers' eyes to a wider range of possibilities for utilizing green, resilient, smart, and sustainable features in architecture and urban planning projects. The 20 chapters offer comprehensive reading for all those interested in the planning, design, and construction of sustainable cities.

Dubai Amplified Stephen J. Ramos,2016-04-29 Following the British withdrawal in 1971, the Gulf Region entered a heady period of political restructuring, awash with oil money that helped fund national aspirations. Infrastructure investment became a central part of the region's nation-building initiatives and fueled strong competition. Without its neighbours' oil fields, infrastructure and territorial development became particularly vital to Dubai. This book provides a unique and detailed understanding of Dubai urbanism by demonstrating that cumulative programmatic intensification and scalar amplification of its large-scale infrastructural components guided its metropolitan growth and generated a territorial organization logic that outstripped the predictive capacity of traditional Western master planning. Dubai's rapid series of infrastructural projects culminated in the Jebel Ali Port, Industrial Area, and Free Zone, which marked a definitive before and after point. The book shows how Jebel Ali also became the template for subsequent developments, Dubai World Holdings Company's international aspirations, and the agencies that manage and regulate Dubai's large-scale infrastructural projects today. *Dubai Amplified* highlights the cycle of typological borrowing, prototypical replication, and scalar amplification, specifically in Dubai's infrastructure projects, to best describe its general territorial development. While infrastructure is traditionally understood as the elemental hardware that undergirds urban development, the book concludes by arguing that the definition should be expanded in this case as more of a set of objects, networks, and services that cities can selectively borrow, replicate, and amplify.

Urban Challenges in the Globalizing Middle-East Simona Azzali,Silvia Mazzetto,Attilio Petruccioli,2021-04-20 This publication

aims to investigate the nature of social life in public and urban spaces in the cities of the Middle East, considering the value of environmental approaches. It aims to develop a better understanding of the patterns of social interactions and activities in public places, which have been influenced by cultural heritage values. Sustainable and livable open spaces can help in improving living conditions in cities. Public spaces are relevant as they satisfy many human needs. In public spaces, people interact and meet; people with different cultures and social backgrounds can communicate and learn from each other in social and spontaneous ways. However, decision-makers tend to forget the value of public spaces, especially in the absence of a national regulatory framework in emerging globalized cities. The book provides a multi-disciplinary approach in reading the characteristics and values of public spaces in the emerging cities of the Middle East.
