*Business Economics* Mark P. Taylor,N. Gregory Mankiw,Andrew Ashwin,2013 Business Economics builds on the authority, clarity and real-world relevance of Economics by Gregory Mankiw and Mark Taylor (two of the world's leading economists) to create an introductory economics textbook fully focused on the curriculum and pedagogical needs of business economics students. Business Economics has a superb logical structure. The classic ten principles approach to economics is retained and right at the outset the text considers the business environment

so immediately establishing the book's business focus. Both microeconomics and macroeconomics are then comprehensively covered and each perspective is carefully mined for insights directly relevant to business economics students. A final part examines the implications of economic globalization for the conduct of business internationally. Business Economics is a global textbook with a particular focus on Europe, the Middle East and Africa; it is replete with examples from all these regions. This text is ideal for use on both business economics degrees and on business economics modules on business, engineering and social science courses at undergraduate level. It is also ideal for use on MBA courses.

The book also draws attention to the manner in which agents become complicit in the reproduction of wider practices of wrongdoing. **Big Data, Databases and "Ownership" Rights in the Cloud** Marcelo Corrales Compagnucci, 2019-11-02 Two of the most important developments of this new century are the emergence of cloud computing and big data. However, the uncertainties surrounding the failure of cloud service providers to clearly assert ownership rights over data and databases during cloud computing transactions and big data services have been perceived as imposing legal risks and transaction costs. This lack of clear ownership rights is also seen as slowing down the capacity of the Internet market to thrive. Click-through agreements drafted on a take-it-or-leave-it basis govern the current state of the art, and they do not allow much room for negotiation. The novel contribution of this book proffers a new contractual model advocating the extension of the negotiation capabilities of cloud customers, thus enabling an automated and machine-readable framework, orchestrated by a cloud broker. Cloud computing and big data are constantly evolving and transforming into new paradigms where cloud brokers are predicted to play a vital role as innovation intermediaries adding extra value to the entire life cycle. This evolution will alleviate the legal uncertainties in society by means of embedding legal requirements in the user interface and related computer systems or its code. This book situates the theories of law and economics and behavioral law and economics in the context of cloud computing and takes database rights and ownership rights of data as prime examples to represent the problem of collecting, outsourcing, and sharing data and databases on a global scale. It does this by highlighting the legal constraints concerning ownership rights of data and databases and proposes finding a solution outside the boundaries and limitations of the law. By allowing cloud brokers to establish themselves in the market as entities coordinating and actively engaging in the negotiation of service-level agreements (SLAs), individual customers as well as small and medium-sized enterprises could efficiently and effortlessly choose a cloud provider that best suits their needs. This approach, which the author calls "plan-like architectures," endeavors to create a more trustworthy cloud computing environment and to yield radical new results for the development of the cloud computing and big data markets.
