The Evolution of Man Grafton Elliot Smith, 1924

The Origins of Man Douglas Palmer, 2007 *Origins of Man* gathers the many strands of investigation into our origins - including fossil remains, ancient artefacts, palaeoclimatological evidence from ice cores, genetics and linguistic traces - to offer a comprehensive overview of the current state of knowledge of our origins and the human diaspora across the globe. The text is richly supplemented with detailed, specially commissioned cartography, illustrations and photographs. The many discoveries made in recent times, for instance the discovery of *Homo floresiensis* (the 'hobbit' people), and the

700,000-year-old tools found near Pakefield in England, have generated considerable media coverage and general interest in human origins. Tracing family trees through genetics is also becoming increasingly high profile, and this can reveal fascinating details about our origins and how our ancestors settled the planet. This atlas communicates a subject of the utmost interest to us all in an entertaining and accessible fashion, making special use of maps to help the reader to visualize the complex story of how we became who we are, and how the planet was colonized.

Human Evolution Bernard Campbell, 2017-09-04 In this new fourth edition, Campbell has revised and updated his classic introduction to the field. Human Evolution synthesizes the major findings of modern research and theory and presents a complete and integrated account of the evolution of human beings. New developments in microbiology and recent fossil records are incorporated into the enormous range of this volume, with the resulting text as lucid and comprehensive as earlier editions. The fourth edition retains the thematic structure and organization of the third, with its cogent treatment of human variability and speciation, primate locomotion, and nonverbal communication and the evolution of language, supported by more than 150 detailed illustrations and an expanded and updated glossary and bibliography. As in prior editions, the book treats evolution as a concomitant development of the main behavioral and functional complexes of the genus Homo- among them motor control and locomotion, mastication and digestion, the senses and reproduction. It analyzes each complex in terms of its changing function, and continually stresses how the separate complexes evolve interdependently over the long course of the human journey. All these aspects are placed within the context of contemporary

evolutionary and genetic theory, analyses of the varied extensions of the fossil record, and contemporary primatology and comparative morphology. The result is a primary text for undergraduate and graduate courses, one that will also serve as required reading for anthropologists, biologists, and nonspecialists with an interest in human evolution.

Java Man Carl C. Swisher III, Carl Celso Swisher, Garniss H. Curtis, Roger Lewin, 2001-11
'Garniss, lend me your knife for a second, will you,' I whispered. So begins *Java Man*, the inside story of how one discovery—a human skull found on the island of Java—by two geologists shook the foundations of science. By uncovering new evidence about the hominid known as Java man, Carl C. Swisher and Garniss H. Curtis were able to date his fossil remains at 1.7 million years, an age that stunned the scientific community because it pushed back the time when humans migrating out of Africa first reached Eurasia by nearly one million years. Cowritten by the popular science writer Roger Lewin, this is a gripping and informative account of the discovery that breathed new life into the human origins debate. Man the Hunted Donna Hart, 2018-04-17 *Man the Hunted* argues that primates, including the earliest members of the human family, have evolved as the prey of any number of predators, including wild cats and dogs, hyenas, snakes, crocodiles, and even

birds. The authors' studies of predators on monkeys and apes are supplemented here with the observations of naturalists in the field and revealing interpretations of the fossil record. Eyewitness accounts of the 'man the hunted' drama being played out even now give vivid evidence of its prehistoric significance. This provocative view of human evolution suggests that countless adaptations that have allowed our species to survive (from larger brains to speech), stem from a considerably more vulnerable position on the food chain than we might like to imagine. The myth of early humans as fearless hunters dominating the earth obscures our origins as just one of many species that had to be cautious, depend on other group members, communicate danger, and come to terms with being merely one cog in the complex cycle of life.

Unveiling Man's Origins L. S. B. Leakey,Vanne Morris Goodall,2010-10-22 Originally published in 1969, the aim of this book is to tell the story of the major discoveries which

have been made and the attitude of the world at large to these discoveries during the ten decades since Darwin published *On the Origin of Species* in 1859. For anyone interested in man's past and in understanding the significance of each new discovery relating to human evolution, this reissue will be of great value.

Mental Evolution in Man George John Romanes, 1888 In now carrying my study of mental evolution into the province of human psychology, it is desirable that I should say a few words to indicate the scope and intention of this the major portion of my work. For it is evident that *Mental Evolution in Man* is a subject comprehending so enormous a field that, unless some lines of limitation are drawn within which its discussion is to be confined, no one writer could presume to deal with it. The lines, then, which I have laid down for my own guidance are these. My object is to seek for the principles and causes of mental evolution in man, first as regards the origin of human faculty, and next as regards the several main branches into which faculties distinctively human afterwards ramified and developed. In order as far as possible to gain this object, it has appeared to me desirable to take large or general views, both of the main trunk itself, and also of its sundry branches. Therefore I have throughout avoided the temptation of following any of the branches into their smaller ramifications, or of going into the details of progressive development. These, I have felt, are matters to be dealt with by others who are severally better qualified for the task, whether their special studies have reference to language, archaeology, technicology, science, literature, art, politics, morals, or religion. But, in so far as I shall subsequently have to deal with these subjects, I will do so with the purpose of arriving at general principles bearing

upon mental evolution, rather than with that of collecting facts or opinions for the sake of their intrinsic interest from a purely historical point of view--Preface. (PsycINFO Database Record (c) 2011 APA, all rights reserved).

Descent of Man Revisited World History John C. Landon, 2012-04 Descent of Man Revisited deals with the questions of world history and human emergence, as it explores issues of evolutionary theory, biological self-organization, and the history of biological thought, from the period of Lamarck and the predecessors of Darwin. The relationship of evolution to history remains a source of confusion, and the text explores this problem, along with the issues of non-random emergence visible in the archaeological record. This invites a close look at the data of the so-called Axial Age. Included is a new perspective on the rise of modernity, and the debates over secularism. The text contains a set of outlines of world history, attempting to examine the idea of 'evolutionary chronicles' as the early emergence of man passes through a transition from 'evolution to history'. This idea requires considering the idea of the 'evolution of freedom'. This creates a connection with issues of so-called Big History, and the classical philosophy of history. There are many additional topics discussed, from the evolution of ethics, and consciousness, to the riddle of evolutionary enlightenment, finally to the question of the 'first and last man', an idea from Olaf Stapleton, in a consideration of the future evolution of man, in the 'conclusion' or 'self-evolutionary epilog' of homo sapiens.
