Math Fact Fluency Jennifer Bay-Williams,Gina Kling,2019-01-14 This approach to teaching basic math facts, grounded in years of research, will transform students' learning of basic facts and help them become more confident, adept, and successful at math. Mastering the basic facts for addition, subtraction, multiplication, and division is an essential goal for all students. Most educators also agree that success at higher levels of math hinges on this fundamental skill. But what's the best way to get there? Are flash cards, drills, and timed tests the answer? If so, then why do students go into the upper elementary grades (and beyond) still counting on their fingers or experiencing math anxiety? What does research say about teaching basic math facts so they will stick? In Math Fact Fluency, experts Jennifer Bay-Williams and Gina Kling provide the answers to these questions—and so much more. This book offers everything a teacher needs to teach, assess, and communicate with parents about basic math fact instruction, including The five fundamentals of fact fluency, which provide a research-based framework for effective instruction in the basic facts. Strategies students can use to find facts that are not yet committed to memory. More than 40 easy-to-make, easy-to-use games that provide engaging fact practice. More than 20 assessment tools that provide useful data on fact fluency and mastery. Suggestions and strategies for collaborating with families to help their children master the basic math facts. Math Fact Fluency is an indispensable guide for any educator who needs to teach basic math facts.

Mastering the Basic Math Facts in Addition and Subtraction Susan O'Connell,John SanGiovanni,2015-04-20 When math fact instruction is thoughtful and strategic, it results in more than a student's ability to quickly recall a fact; it cultivates reflective students who have a greater understanding of numbers and a flexibility of thinking that allows them to understand connections between mathematical ideas. -Susan O'Connell and John SanGiovanni In today's math classroom, we want children to do more than just memorize math facts. We want them to understand the math facts they are being asked to memorize. Our goal is automaticity and understanding; without both, our children will never build the foundational skills needed to do more complex math. Both the Common Core State Standards and the NCTM Principles and Standards emphasize the importance of understanding the concepts of addition and subtraction. Susan O'Connell and John SanGiovanni provide insights into the teaching of basic math facts, including a multitude of instructional strategies, teacher tips, and classroom activities to help students master their facts while strengthening their understanding of numbers, patterns, and properties. Designed to be easily integrated into your existing math program, Mastering the Basic Math Facts: emphasizes the big ideas that provide a focus for math facts instruction broadens your repertoire of instructional strategies provides dozens of easy-to-implement activities to support varied levels of learners stimulates your reflection related to teaching math facts. Through investigations, discussions, visual models, children's literature, and hands-on explorations, students develop an understanding of the concepts of addition and subtraction, and through engaging, interactive practice achieve fluency with basic facts. Whether you're introducing your students to basic math facts, reviewing facts, or providing intervention for struggling students, this book will provide you with insights and activities to simplify this complex, but critical, component of math teaching. Extensive online resources include customizable activities, templates, recording sheets, and teacher tools (such as multiplication tables, game templates, and assessment options) to simplify your planning and preparation. No More Math Fact Frenzy Linda Ruiz Davenport,Connie S. Henry,Douglas H. Clements,Julie Sarama,2019 Pencils ready? On your mark...get set...begin! Remember flipping over a page full of unrelated fact problems and scrambling to answer as many as possible in a minute? Remember trying to memorize math facts by rote? Many of our children are still asked to learn this way-even though research shows this approach can harm student learning more than help. Explore an effective, research-based approach to math fact instruction. No More Math Fact Frenzy examines this research and concludes that our approaches to math fact instruction are often ineffective. We want our students to know their math facts. We know they're better mathematicians when they're comfortable with them. Yet the ways we ask students to learn them in many classrooms remain unproductive. To address this, the authors outline three phases for helping students master their math facts. Building foundational concepts and strategies Learning more efficient reasoning strategies Meaningful, ongoing practice leading to full fact fluency Then they share recommendations for all three phrases: activities and games that build number sense, strategies that lead to flexible thinking, and ways to create and sustain a classroom culture of fluency. This kind of teaching helps students learn their math facts more successfully-and with less stress and anxiety. When we emphasize foundation concepts and reasoning strategies as the path towards building authentic fluency, students can develop their number sense, articulate their thinking, and understand the reasoning of others. -Linda Ruiz Davenport, Connie S. Henry, Douglas H. Clements, and Julie Sarama
