The Internet of Things Pethuru Raj, Anupama C. Raman, 2017-02-24 As more and more devices become interconnected through the Internet of Things (IoT), there is an even greater need for this book, which explains the technology, the internetworking, and applications that are making IoT an everyday reality. The book begins with a discussion of IoT ecosystems and the technology that enables them, which includes: Wireless Infrastructure and Service Discovery Protocols Integration Technologies and Tools Application and Analytics Enablement Platforms A chapter on next-generation cloud infrastructure explains hosting IoT platforms and applications. A chapter on data analytics throws light on IoT data collection, storage, translation, real-time processing, mining, and analysis, all of which can yield actionable insights from the data collected by IoT applications. There is also a chapter on edge/fog computing. The second half of the book presents various IoT ecosystem use cases. One chapter discusses smart airports and highlights the role of IoT integration. It explains how mobile devices, mobile technology, wearables, RFID sensors, and beacons work together as the core technologies of a smart airport. Integrating these components into the airport ecosystem is examined in detail, and use cases and real-life examples illustrate this IoT ecosystem in operation. Another in-depth look is on envisioning smart healthcare systems in a connected world. This chapter focuses on the requirements, promising applications, and roles of cloud computing and data analytics. The book also examines smart homes, smart cities, and smart governments. The book concludes with a chapter on IoT security and privacy. This chapter examines the emerging security and privacy requirements of IoT environments. The security issues and an assortment of surmounting techniques

and best practices are also discussed in this chapter.

*The Cybernetics Moment* Ronald R. Kline, 2015-07-15 How did cybernetics and information theory arise, and how did they come to dominate fields as diverse as engineering, biology, and the social sciences? Winner of the CHOICE Outstanding Academic Title of the Choice ACRL Outstanding Academic Title, *Choice Cybernetics*—the science of communication and control as it applies to machines and to humans—originates from efforts during World War II to build automatic antiaircraft systems. Following the war, this science extended beyond military needs to examine all systems that rely on information and feedback, from the level of the cell to that of society. In *The Cybernetics Moment*, Ronald R. Kline, a senior historian of technology, examines the intellectual and cultural history of cybernetics and information theory, whose language of “information,” “feedback,” and “control” transformed the idiom of the sciences, hastened the development of information technologies, and laid the conceptual foundation for what we now call the Information Age. Kline argues that, for about twenty years after 1950, the growth of cybernetics and information theory and ever-more-powerful computers produced a utopian information narrative—an enthusiasm for information science that influenced natural scientists, social scientists, engineers, humanists, policymakers, public intellectuals, and journalists, all of whom struggled to come to grips with new relationships between humans and intelligent machines. Kline traces the relationship between the invention of computers and communication systems and the rise, decline, and transformation of cybernetics by analyzing the lives and work of such notables as Norbert Wiener, Claude Shannon, Warren McCulloch, Margaret Mead, Gregory Bateson, and Herbert Simon. Ultimately, he reveals the crucial role played by the

cybernetics moment—when cybernetics and information theory were seen as universal sciences—in setting the stage for our current preoccupation with information technologies.

**Human Error in Aviation** R.Key Dismukes, 2017-07-05 Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

**Australia in Space** Kerrie A. Dougherty, 2017-12-31 The exploration of space was seen as the greatest adventure of the Twentieth Century, while in the Twenty First Century space-based services have become an integral part of our daily lives. Although it is not often recognised, Australia has had its part to play in setting the world on the road to the stars and was one of the earliest nations to launch its own satellite. Today, the country is one of the largest users of space-based services. This revised and updated edition of Space Australia tells the story of Australia's involvement with space activities, from the earliest rocketeers to the latest satellite projects. It describes the vision, high hopes and achievements of professional space

scientists and engineers, in both the civil and defence spheres, as well as the inspired amateurs and the new-breed of young space entrepreneurs who want to contribute to Australia's space future. The book also highlights the challenges of maintaining an Australian commitment to space activities through changing political and economic circumstances.

**Defining the Fringe of Contemporary Australian Archaeology** Rocco Bosco, Darran Jordan, 2018-04-18 Popular culture has often presented a mythologised version of archaeology that at times misinforms the general public about broader academic intentions. The fantastic and bizarre continue to capture the public imagination, so that while archaeological teams excavate, survey and record, they occupy the same geographic locations as ghost tour operators and seekers of the supernatural. Not only does archaeology operate within the same geography as modern mythology, but widespread access to technology, from satellite imagery to GPS data, means that enthusiastic amateurs can partake in their own investigations. With limited landscape identification training, an enthusiasm for discovery and strange cultural biases, fringe operators have utilised new technologies to justify old fallacies through variant forms of amateur archaeology. This collection draws on the wealth of work currently being undertaken by contemporary archaeologists in Australia, from rock art observations to art/archaeology experiments and even space archaeology. It explores archaeology on the edge, contextualising the fringe dwellers that operate on the periphery of accepted academia. It also looks at contemporary archaeological theory and practice in relation to these fringe operators, developing approaches toward interaction, in contrast to the more common reaction of repudiation. The relationship between the accepted centre and the

outer edge in contemporary archaeological practice and theory unveils much about popular misconceptions and how archaeological spaces can be overlaid with variant mythological and cultural interpretations.

**Why Guattari? A Liberation of Cartographies, Ecologies and Politics** Thomas Jellis, Joe Gerlach, John-David Dewsbury, 2019-05-13 This book examines Félix Guattari, the French psychoanalyst, philosopher, and radical activist, renowned for an energetic style of thought that cuts across conceptual, political, and institutional spheres. Increasingly recognised as a key figure in his own right, Guattari's influence in contemporary social theory and the modern social sciences continues to grow. From the ecosophy of hurricanes to the micropolitics of cinema, the book draws together a series of Guattarian motifs which animate the complexity of one of the twentieth century's greatest and most enigmatic thinkers. The book examines techniques and modes of thought that contribute to a liberation of thinking and subjectivity. Divided thematically into three parts - 'cartographies', 'ecologies', and 'micropolitics' - each chapter showcases the singular and pragmatic grounds by which Guattari's signature concepts can be found to be both disruptive to traditional modes of thinking, and generative toward novel forms of ethics, politics and sociality. This interdisciplinary compendium on Guattari's exciting, experimental, and enigmatic thought will appeal to academics and postgraduates within Social Theory, Human Geography, and Continental Philosophy. Chapter 1 of this book is freely available as a downloadable Open

**Showcasing Space** Martin J. Collins, 2005 This volume explores the meaning of space artifacts, both as products of particular historical settings and as windows for understanding technological and cultural change. Seven contributors, most of whom are museum curators, address these challenges through the history of particular artifacts, highlighting differences and commonalities across technologies, institutions, professional communities, projects and geographical contexts. The essays sample the broad range of space activity--from launch vehicles to satellites and space capsules, from military to commercial and scientific purposes. They include an exploration of the Black Arrow rocket project in Britain, the European Launcher Development Organization, the Apollo 204 spacecraft in the United States, the Iridium commercial global satellite communications system, the Soviet space program, and rocket recovery in Australia. What stories can space artifacts tell? What kinds of information and experiences might real objects convey that images and representations do not? Do they speak for themselves, or do they represent a dense sediment of human agency, culture and technology needing interpretation by experts? And, more particularly, in what ways do space artifacts originating in Cold War culture pose historiographic questions and issues that do not arise from artifacts with other histories? Questions such as these speak to the Artifacts series' purpose: To explore the overlapping interests of museums and historians of science and technology in understanding artifacts, as well as presenting that understanding to scholarly and general publics. This series is sponsored by the Science Museum in London, UK, the Deutsches Museum in Munich, Germany, and the Smithsonian

Institution in Washington DC, US--three of the world's great repositories of material heritage in the history of technology.

**Motion Sickness** Thomas G. Dobie, 2019-02-01 This book offers a survey of the state of the art in the field of motion sickness. It begins by describing the historical background and the current definition of motion sickness, then discusses the prevalence among individuals, along with the physiological and psychological concomitants of the disorder. It reviews the incidence of motion sickness in numerous provocative motion environments and discusses various personal factors that appear to influence this aspect. Various characteristics of provocative motion stimuli are also described, together with the results of studies conducted in the laboratory, on motion simulators and at sea. Laboratory tests that could potentially be used to assess an individual's susceptibility to motion sickness and his or her ability to adapt to motion environments are presented in detail, together with the ways in which individuals might be trained to prevent motion sickness or more effectively cope with motion environments. In closing, the book reports on the cognitive-behavioral approach developed by the author (Dobie, 1963) as well as the various desensitization programs employed in military settings, and discusses the relative effectiveness of these methods in comparison to cognitive-behavioral counseling.
