Evaluation of Certain Food Additives Joint FAO/WHO Expert Committee on Food Additives. Meeting, World Health Organization, Food and Agriculture Organization of the United Nations, 2010 Specifications for the following food additives were revised: diacetyltartaric acid and fatty acid esters of glycerol, ethyl lauroyl arginate, glycerol ester of wood rosin, nisin preparation, nitrous oxide, pectins, starch sodium octenyl succinate, tannic acid, titanium dioxide and triethyl citrate.

Global and regional food availability from 2000 to 2017 – An analysis based on Supply Utilization Accounts data Food and Agriculture Organization of the United Nations, 2020-11-06 One of the main pillars of food security is food supply, which refers to the availability of sufficient quantities of food of appropriate quality, supplied through domestic production or imports. In this paper, we use quantities of commercialized foods from the Supply and Utilization Accounts (SUA) compiled by the Food and Agriculture Organization of the United Nations (FAO) to analyze trends in food available for consumption based on by region and country income level group. Results show that, in general, food groups available for consumption differ across income-level country groups. There are nonetheless evident regional trends. Low-income and lower-middle-income countries have a high reliance on staple foods, and only upper-middle-income countries and Asia have enough fruits and vegetables available to meet the FAO/World Health Organization (WHO) recommendation of consuming a minimum of 400 grams per day. In addition, the availability of animal-source foods, as well as sugars and fats, overall is highest in high-income countries, but it is increasing fast in upper-middle-income countries.

Food Cultures of the World Encyclopedia [4 volumes] Ken Albala, 2011-05-25 This comprehensive reference work introduces food culture from more than 150 countries and cultures around the world—including some from remote and unexpected peoples and places. From babka to baklava to the groundnut stew of Ghana, food culture can tell us where we've been—and maybe even where we're going. Filled with succinct, yet highly informative entries, the four-volume Food Cultures of the World Encyclopedia covers all of the planet's nation-states, as well as various tribes and marginalized peoples. Thus, in addition to coverage on countries as disparate as France, Ethiopia, and Tibet, there are also entries on Roma Gypsies, the Maori of New Zealand, and the Saami of northern Europe. There is even a section on food in outer space, detailing how and what astronauts eat and how they prepare for space travel as far as diet and nutrition are concerned. Each entry offers information about foodstuffs, meals, cooking methods, recipes, eating out, holidays and celebrations, and health and diet. Vignettes help readers better understand other cultures, while the inclusion of selected recipes lets them recreate dishes from other lands.

Safety Evaluation of Certain Food Additives Joint FAO/WHO Expert Committee on Food Additives. Meeting, World Health Organization, 2010 The toxicological monographs in this volume summarize the safety data on a number of food additives: branching glycosyltransferase from *Rhodothermus obamensis* expressed in *Bacillus subtilis*, cassia gum, ferrous ammonium phosphate, glycerol ester of gum rosin, glycerol ester of tall oil rosin, lycopene from all sources, octenyl succinic acid modified gum arabic, sodium hydrogen sulfate and sucrose oligoesters type I and type II. A monograph on the assessment of dietary exposure to cyclamic acid and its salts is also included. This volume and others in the WHO Food Additives Series contain information that is useful to those who produce and use food additives and veterinary drugs and those involved with controlling contaminants in food, government and food regulatory officers, industrial testing laboratories, toxicological laboratories and universities.

World Food and Agriculture – Statistical Yearbook 2022 Food and Agriculture Organization of the United Nations, 2022-12-12 This publication offers a synthesis of the major factors at play in the global food and agricultural landscape. Statistics are presented in four thematic chapters, covering

the economic importance of agricultural activities, inputs, outputs and factors of production, their implications for food security and nutrition and their impacts on the environment. The Yearbook is meant to constitute a primary tool for policymakers, researchers and analysts, as well as the general public interested in the past, present and future path of food and agriculture.

Food systems for an urbanizing world Food and Agriculture Organization of the United Nations, World Bank Group, 2018-08-29 Food Systems for an Urbanizing World is a joint report prepared by the World Bank and FAO. It aims to stimulate discussion and suggest pathways to support local and national governments, and civil society and private sector actors in their efforts to improve the performance and capacity of food systems. The report describes the diversity and ever-changing nature of food systems, with interlinked traditional, modern and informal channels that respond to different market segments and different consumer preferences. It also underscores the importance of targeting support to the type of city and food system. The task is not an easy one. Data are weak and empirical analysis is weaker. As cities' engagement in urban food issues is relatively new, the institutions, governance mechanisms and capacities needed for effective design, implementation and delivery of this agenda must be strengthened. Finding effective ways to prioritize, mobilize and coordinate contributions from multiple sectors will be essential for achieving food system goals.

The State of the World's Biodiversity for Food and Agriculture Food and Agriculture Organization of the United Nations, 2019-03-12 The State of the World's Biodiversity for Food and Agriculture presents the first global assessment of biodiversity for food and agriculture worldwide. Biodiversity for food and agriculture is the diversity of plants, animals and micro-organisms at genetic, species and ecosystem levels, present in and around crop, livestock, forest and aquatic production systems. It is essential to the structure, functions and processes of these systems, to livelihoods and food security, and to the supply of a wide range of ecosystem services. It has been managed or influenced by farmers, livestock keepers, forest dwellers, fish farmers and fisherfolk for hundreds of generations. Prepared through a participatory, country-driven process, the report draws on information from 91 country reports to provide a description of the roles and importance of biodiversity for food and agriculture, the drivers of change affecting it and its current status and trends. It describes the state of efforts to promote the sustainable use and conservation of biodiversity for food and agriculture, including through the development of supporting policies, legal frameworks, institutions and capacities. It concludes with a discussion of needs and challenges in the future management of biodiversity for food and agriculture. The report complements other global assessments prepared under the auspices of the Commission on Genetic Resources for Food and Agriculture, which have focused on the state of genetic resources within particular sectors of food and agriculture.

The Cambridge World History of Food Kenneth F. Kiple, Kriemhild Coneè Ornelas, 2000 A two-volume set which traces the history of food and nutrition from the beginning of human life on earth through the present.

Safety Evaluation of Certain Food Additives and Contaminants Joint FAO/WHO Expert Committee on Food Additives. Meeting, World Health Organization, 2014-03-31 This volume contains monographs prepared at the seventy-seventh meeting of the Joint FAO/WHO Expert Committee on Food Additives (JECFA), which met in Rome, Italy, from 4 to 13 June 2013. The toxicological monographs in this volume summarize the safety data on three food additives: advantame, glucoamylase (from *Trichoderma reesei* expressed in *Trichoderma reesei*) and nisin. Toxicological and dietary exposure information and information on specifications for all of the food additives and contaminants considered by the Committee are annexed to the volume. This volume and others in the WHO Food Additives series contain information that is useful to those who produce and use food additives and veterinary drugs and those involved with controlling contaminants in food, government and food regulatory officers, industrial testing laboratories, toxicological laboratories and universities.

A Book of Mediterranean Food Elizabeth David, 2013-12-06 A Book of Mediterranean Food - published in 1950 - was Elizabeth David's first book and it is based on a collection of recipes she

made while living in France, Italy, the Greek islands and Egypt. 'Britain's most inspirational food writer' Independent She gives us hearty pasta and polenta dishes from Italy; aromatic and tangy salads from Turkey and Greece; and tasty seafood and saffron dishes from Spain. Whether it is the simplicity of hummus or the delicious blending of flavours found in plates of ratatouille or paella, Elizabeth David's wonderful recipes are imbued with all the delights of the sunny south. 'Not only did she transform the way we cooked but she is a delight to read' Express on Sunday Elizabeth David is the woman who changed the face of British cooking. She introduced post-war Britain to the sun-drenched delights of the Mediterranean and her recipes brought new flavours and aromas into kitchens across Britain.

The Sixth World Food Survey, 1996 Food and Agriculture Organization of the United Nations, 1996 This survey contains some new features which set it apart from its predecessors. Firstly, China and those other countries formerly known as Asian centrally-planned economies, which were previously excluded in the traditional estimates of the prevalence of food inadequacy or undernutrition, are now included. Secondly, the method of estimation has been refined. The coverage of anthropometric indicators, which provide information on the nutritional status of subgroups such as children, adolescents and adults, has also been expanded. The main conclusion of the survey is that in developing countries as a whole, per caput dietary energy has continued to increase. Although 20 per cent of the total population had inadequate access to food in 1990-92, this is compared with 35 per cent two decades previously.

The State of Food Security and Nutrition in the World 2022 Food and Agriculture Organization of the United Nations, International Fund for Agricultural Development, United Nations Children's Fund, World Food Program, World Health Organization, 2022-07-06 This year's report should dispel any lingering doubts that the world is moving backwards in its efforts to end hunger, food insecurity and malnutrition in all its forms. We are now only eight years away from 2030, but the distance to reach many of the SDG 2 targets is growing wider each year. There are indeed efforts to make progress towards SDG 2, yet they are proving insufficient in the face of a more challenging and uncertain context. The intensification of the major drivers behind recent food insecurity and malnutrition trends (i.e. conflict, climate extremes and economic shocks) combined with the high cost of nutritious foods and growing inequalities will continue to challenge food security and nutrition. This will be the case until agrifood systems are transformed, become more resilient and are delivering lower cost nutritious foods and affordable healthy diets for all, sustainably and inclusively.

The World Bank Group and the Global Food Crisis The World Bank, 2014-04-24 The unanticipated spike in international food prices in 2007-08 hit many developing countries hard. This evaluation assesses the effectiveness of the World Bank Group response in addressing the short-term impacts of the food price crisis and in enhancing the resilience of countries to future shocks.

International Standards for Food Safety Naomi Rees, David Watson, 2000-04-30 This is one of the first books to draw together information and views about international control of food safety from around the world. Demands for safe food, against a background of increasing trade, are making international controls on food safety essential. Agreements on how to control the safety of food to meet these needs are now in place among the major trading blocks, particularly in Europe and in the USA, and more recently, in Australia. This book also describes progress in areas such as systematically reviewing risk from food; developing national infrastructures to enforce standards; and growing input from consumer groups and others, including economists, to the debate on how to set international food standards. Discussed in depth is the effort to achieve global standards for food safety under the auspices of the Codex Alimentarius Commission. There are chapters from world-leading experts on Codex, international control of radiological contamination, pesticides and veterinary drugs, and other chemical contaminants.

The State of Food Security and Nutrition in the World 2020 Food and Agriculture Organization of the United Nations, International Fund for Agricultural Development, World Food Programme, World Health Organization, The United Nations Children's Fund, 2020-07-01 Updates for many countries have made it possible to estimate hunger in the world with greater accuracy this

year. In particular, newly accessible data enabled the revision of the entire series of undernourishment estimates for China back to 2000, resulting in a substantial downward shift of the series of the number of undernourished in the world. Nevertheless, the revision confirms the trend reported in past editions: the number of people affected by hunger globally has been slowly on the rise since 2014. The report also shows that the burden of malnutrition in all its forms continues to be a challenge. There has been some progress for child stunting, low birthweight and exclusive breastfeeding, but at a pace that is still too slow. Childhood overweight is not improving and adult obesity is on the rise in all regions. The report complements the usual assessment of food security and nutrition with projections of what the world may look like in 2030, if trends of the last decade continue. Projections show that the world is not on track to achieve Zero Hunger by 2030 and, despite some progress, most indicators are also not on track to meet global nutrition targets. The food security and nutritional status of the most vulnerable population groups is likely to deteriorate further due to the health and socio economic impacts of the COVID-19 pandemic. The report puts a spotlight on diet quality as a critical link between food security and nutrition. Meeting SDG 2 targets will only be possible if people have enough food to eat and if what they are eating is nutritious and affordable. The report also introduces new analysis of the cost and affordability of healthy diets around the world, by region and in different development contexts. It presents valuations of the health and climate-change costs associated with current food consumption patterns, as well as the potential cost savings if food consumption patterns were to shift towards healthy diets that include sustainability considerations. The report then concludes with a discussion of the policies and strategies to transform food systems to ensure affordable healthy diets, as part of the required efforts to end both hunger and all forms of malnutrition.

World Food Mary Ellen Snodgrass, 2012-09-15 This multicultural and interdisciplinary reference brings a fresh social and cultural perspective to the global history of food, foodstuffs, and cultural exchange from the age of discovery to contemporary times. Comprehensive in scope, this two-volume encyclopedia covers agriculture and industry, food preparation and regional cuisines, science and technology, nutrition and health, and trade and commerce, as well as key contemporary issues such as famine relief, farm subsidies, food safety, and the organic movement. Articles also include specific foodstuffs such as chocolate, potatoes, and tomatoes; topics such as Mediterranean diet and the Spice Route; and pivotal figures such as Marco Polo, Columbus, and Catherine de' Medici. Special features include: dozens of recipes representing different historic periods and cuisines of the world; listing of herbal foods and uses; and a chronology of key events/people in food history.

Legal Dictionary of Food Security in the World François Collart Dutilleul, 2013-12-06 This dictionary contains about 170 entries and presents an overview of the different issues related to worldwide food insecurity, with a particular yet not exclusive focus on the existing rules and regulations. The objective of food security is considered from a quantitative angle (security of supplies, access to food) and a qualitative angle (sanitary quality of food, commercial quality). Therefore, this dictionary analyzes the concept of food security "from farm to fork". These entries were selected because they bring to light the international legal frame of food security and because they point out the current issues linked to the production of food, the local, regional or international trade of food, the food and health crises, the current situation in developing countries, etc. Consequently, among the issues that will be addressed inside this book, there will be some definitions of "land grabbing", "bio-fuels", "food allergies", "fundamental needs", "fair trade", "the Doha Round", "the right to food", "women", "international investments", "the World Trade Organization", "genetically modified organisms", "the precautionary principle", "protectionism", "land reforms", "corporate social responsibility", "speculation", food sovereignty"... With a wide variety of entries, approached through different perspectives, this dictionary is intended for all audiences.
