*Google: The Missing Manual* Sarah Milstein, J.D. Biersdorfer, Rael Dornfest, Matthew MacDonald, 2006-03-10 Google.com is one of the most popular sites on the Internet and is used around the world by millions of people every day. Sure, you know how to Google it when you're searching for something--anything!--on the Web. It's plenty fast and easy to use. But did you know how much more you could achieve with the world's best search engine by clicking beyond the Google Search button? While you can interface with Google in 97 languages and glean results in 35, you can't find any kind of instruction manual from Google. Lucky for you, our fully updated and greatly expanded second edition to the bestselling *Google: The Missing Manual* covers everything you could possibly want to know about Google, including the newest and coolest--and often most underused (what is Froogle, anyway?)--features. There's even a full chapter devoted to Gmail, Google's free email service that includes a whopping 2.5 GB of space). This wise and witty guide delivers the complete scoop on Google, from how it works to how you can search far more effectively and efficiently (no more scrolling through 168 pages of seemingly

irrelevant results); take best advantage of Google's lesser-known features, such as Google Print, Google Desktop, and Google Suggest; get your website listed on Google; track your visitors with Google Analytics; make money with AdWords and AdSense; and much more. Whether you're new to Google or already a many-times-a-day user, you're sure to find tutorials, tips, tricks, and tools that take you well beyond simple search to Google gurudom.

**Googling Security** Greg Conti, 2008-10-10 What Does Google Know about You? And Who Are They Telling? When you use Google's "free" services, you pay, big time—with personal information about yourself. Google is making a fortune on what it knows about you...and you may be shocked by just how much Google does know. Googling Security is the first book to reveal how Google's vast information stockpiles could be used against you or your business—and what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Google's top applications, not just what savvy users can retrieve via Google's search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google

Groups, Google Alerts, Google's new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Google's databases can be used by others with bad intent, even if Google succeeds in its pledge of "don't be evil." Uncover the trail of informational "bread crumbs" you leave when you use Google search How Gmail could be used to track your personal network of friends, family, and acquaintances How Google's map and location tools could disclose the locations of your home, employer, family and friends, travel plans, and intentions How the information stockpiles of Google and other online companies may be spilled, lost, taken, shared, or subpoenaed and later used for identity theft or even blackmail How the Google AdSense and DoubleClick advertising services could track you around the Web How to systematically reduce the personal information you expose or give away This book is a wake-up call and a "how-to" self-defense manual: an indispensable resource for everyone, from private citizens to security professionals, who relies on Google.
