Diagrams, Diagrams, Diagrams! Kelly Boswell, 2014 What are diagrams? Which one should you use? Find out all about diagrams and the great ways they can help you sort all kinds of information.

Diagram Groups Victor Guba, Mark Sapir, 1997 Diagram groups are groups consisting of spherical diagrams (pictures) over monoid presentations. They can be also defined as fundamental groups of the Squier complexes associated with monoid presentations. The authors show that the class of diagram groups contains some well-known groups, such as the R. Thompson group F. This class is closed under free products, finite direct products, and some other group-theoretical operations. The authors develop combinatorics on diagrams similar to the combinatorics on words. This helps in finding some structure and algorithmic properties of diagram groups. Some of these properties are new even for R. Thompson's group F. In particular, the authors describe the centralizers of elements in F, prove that it has solvable conjugacy problems, etc.

Telling the Design Story Amy Huber, 2017-11-22 When presenting projects in competitive design environments, how you say something is as important as what you're actually saying. Projects are increasingly complex and designers are working from more sources, and many designers are familiar with the struggle to harness this information and craft a meaningful and engaging story from it. Telling the Design Story: Effective and Engaging Communication teaches designers to craft cohesive and innovative presentations through storytelling. From the various

stages of the creative process to the nuts and bolts of writing for impact, speaking skills, and creating visuals, Amy Huber provides a comprehensive approach for designers creating presentations for clients. Including chapter by chapter exercises, project briefs, and forms, this is an essential resource for students and practicing designers alike.

Rainbow Connections of Graphs Xueliang Li, Yuefang

Sun,2012-02-23 Rainbow connections are natural combinatorial measures that are used in applications to secure the transfer of classified information between agencies in communication networks. Rainbow Connections of Graphs covers this new and emerging topic in graph theory and brings together a majority of the results that deal with the concept of rainbow connections, first introduced by Chartrand et al. in 2006. The authors begin with an introduction to rainbow connectedness, rainbow coloring, and rainbow connection number. The work is organized into the following categories, computation of the exact values of the rainbow connection numbers for some special graphs, algorithms and complexity analysis, upper bounds in terms of other graph parameters, rainbow connection for dense and sparse graphs, for some graph classes and graph products, rainbow k-connectivity and k-rainbow index, and, rainbow vertex-connection number. Rainbow Connections of Graphs appeals to researchers and graduate students in the field of graph theory. Conjectures, open problems and questions are given throughout the text with the hope for motivating young graph theorists and graduate students to do further study in this subject.

Efficient Graph Representations. Jeremy P.

Spinrad,2003-01-01 The book deals with questions which arise from storing a graph in a computer. Different classes of graphs admit different forms of computer representations, and focusing on the representations gives a new perspective on a number of problems. For a variety of classes of graphs, the book considers such questions as existence of good representations, algorithms for finding representations, questions of characterizations in terms of representation, and how the representation affects the complexity of optimization problems. General models of efficient computer representations are also considered. The book is designed to be used both as a text for a graduate course on topics related to graph representation, and as a monograph for anyone interested in research in the field of graph representation. The material is of interest both to those focusing purely on graph theory and to those working in the area of graph algorithms.
