Color Psychology in Treating Colour Blindness (Brain Mapping System) Prof. N L

Shraman, 2020-04-30 Person with colour defficiency can recognize all colours and read Ishihara Book. They can pass medical examinations of various services like police, defence, airforce, army. navy etc. Color psychology in Treating Colour Blindness and increasing colour perception is more than just one-sentence explanations of what each color represents. It's true that specific colors can influence the choices of individuals. Color can affect the brain's emotion sensors in many ways. It can call attention, inspire emotions, give assurance or tap into nostalgia. But the psychology of color is not that simple. A sentence like "yellow represents creativity and happiness" is not exactly color psychology—it's a generalized association. In reality, "yellow" can have different connotations depending on how it's used, what color it's placed next to and what tone of yellow it is. Yellow is not always happy and creative—sometimes, it's sickly and pale. The yellow in it is very strong—it catches your attention and makes you feel empowered. Combining this yellow with an image of a roaring lion makes an even stronger impact. To better understand why using the right colors is so important in content

Treating Colour Blindness, it's best to first review the basics. Color psychology in Treating Colour Blindness is primarily based on how people feel about color, and that comes from how they experienced color as children and during the transition into adulthood.
