Excavation, Support and Monitoring J.A. Hudson, 2016-04-06 Comprehensive Rock Engineering: Principles, Practice, & Projects, Volume 4: Excavation, Support, and Monitoring focuses on rock mechanics research and engineering, including excavation, drilling, blasting, and collapse mechanisms of boreholes. The selection first offers information on the construction process, mechanisms of rock fragmentation by blasting, and methods of improving blasting operations. Discussions focus on excavation, support, monitoring, stress wave mechanics, crater blasting, applications in construction and quarry blasting, fragmentation, damage, and environmental aspects. The text also ponders on the regulations, methods, and control techniques of blast monitoring and blast vibration monitoring for rock engineering. The publication takes a look at computer modeling and simulation of percussive drilling of rocks, mechanics of rock cutting, theoretical and practical rules for mechanical rock excavation, and use of water jets for rock excavation. Topics include drag pick cutting, excavating machines, adaptation of mechanical excavation to a harsh environment, abrasive water jets, and combined use of high pressure jets and mechanical cutting tools. The manuscript also examines design of support for underground excavations; development of tunnel support philosophy; and an overview of tunnel, underground excavation, and boreholes collapse mechanisms. The selection is a valuable reference for readers and rock engineering practitioners interested in pursuing research on rock engineering.

Web Services Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju, 2013-03-14 Like many other incipient technologies, Web services are still surrounded by a substantial level of noise. This noise results from the always dangerous combination of wishful thinking on the part of research and industry and of a lack of clear understanding of how Web services came to be. On the one hand, multiple contradictory interpretations are created by the many attempts to realign existing technology and strategies with Web services. On the other hand, the emphasis on what could be done with Web services in the future often makes us lose track of what can be really done with Web services today and in the short term. These factors make it extremely difficult to get a coherent picture of what Web services are, what they contribute, and where they will be applied. Alonso and his co-authors deliberately take a step back. Based on their academic and industrial experience with middleware and enterprise application integration systems, they describe the fundamental concepts behind the notion of Web services and present them as the natural evolution of conventional middleware, necessary to meet the challenges of the Web and of B2B application integration. Rather than providing a reference guide or a how to write your first Web service kind of book, they discuss the main objectives of Web services, the challenges that must be faced to achieve them, and the opportunities that this novel technology provides. Established, as well as recently proposed, standards and techniques (e.g., WSDL, UDDI, SOAP, WS-Coordination, WS-Transactions, and BPEL), are then examined in the context of this discussion in order to emphasize their scope, benefits, and shortcomings. Thus, the book is ideally suited both for professionals considering the development of application integration solutions and for research and students interesting in understanding and contributing to the evolution of enterprise application technologies.

Proliferation, Plutonium and Policy Alexander De Volpi, 2013-10-22 Proliferation, Plutonium and Policy/Institutional and Technological Impediments to Nuclear Weapons Propagation provides a comprehensive account of the political and technological aspects of nuclear weapons proliferation. The technical feasibility of denaturing plutonium is addressed and the extent of the weapons proliferation problem is analyzed. Strategies for minimizing nuclear weapons propagation are recommended. This book is comprised of four chapters and opens with an overview of nuclear fission and the problem of nuclear weapons proliferation, paying particular attention to the importance of international agreements and safeguards in achieving a meaningful (but non-zero) level of restraint on nuclear weapons proliferation. The next chapter considers the use of denatured plutonium and other fission reactor byproducts as a technological option for mitigating proliferation problems. The impact of denatured plutonium on the global operation of nuclear reactors is also discussed. The final chapter assesses the major implications of all proliferation problems within the framework of a sound antiproliferation strategy. This monograph will be of interest to political scientists, policymakers, diplomats, and government officials.

Making Open Development Inclusive Matthew L. Smith,Ruhiya Kristine Seward,2020-08-25 Drawing on ten years of empirical work and research, analyses of how open development has played out in practice. A decade ago, a significant trend toward openness emerged in international development. Open development can describe initiatives as disparate as open government, open health data, open science, open education, and open innovation. The theory was that open systems related to data, science, and innovation would enable more inclusive processes of human development. This volume, drawing on ten years of empirical work and research, analyzes how open development has played out in practice.

Human Rights Education and Peacebuilding Tracey Holland,J. Paul Martin,2014-04-24 This book assesses the role of human rights education (HRE) in the peacebuilding field. Today, most governments, international organisations and non-governmental organisations recognise the importance of human rights in peace- and democracy-building activities in post-conflict regions. However, compared with other components of peacebuilding, little attention and funding have been given to the cultivation of human rights knowledge and skills within these populations. Almost nothing has been committed to understanding how HRE is best accomplished in such difficult circumstances. Human Rights Education and Peacebuilding demonstrates the promise of HRE programs to help bring about peace within challenging post-conflict contexts. Each chapter of this book (a) identifies the short and medium term impacts of seven different HRE programs on their respective target groups, and (b) provides an analysis of the peculiar local contextual factors that influenced each program’s rationale for human rights education. More specifically, each chapter addresses these critical questions: - How are communities around the world using HRE to help rebuild their lives in the aftermath of an armed conflict? - How does HRE respond local problems and needs? How similar are the human rights impacts in the different projects? - How can we understand the promise and challenges associated with HRE as a component of community peace-building? This book will be of much interest to students of peacebuilding, conflict resolution, human rights, education studies and IR in general.
