CrowdRising Lorinda R. Rowledge, 2019-07-05 Open innovation enabled through crowdsourcing is one of the hottest topics in management strategy today. Particularly striking – and of vital importance to the world – are the pioneering efforts to apply crowdsourcing technology and open innovation to solve social, environmental, and economic sustainability challenges. CrowdRising sets out these challenges as context and then highlights the experiences of leaders and early adopters, identifies implementation guidelines, critical success factors and lessons learned, and finally projects where the field is going in the future. With a strong focus on the applications of crowdsourcing for innovation, engagement, and market intelligence, the book profiles the initiatives of companies, NGOs, and technology providers using crowdsourcing to develop these solutions to global problems. It addresses the key challenges impacting organizations: 1) identifying more sustainable ways to design, distribute, transport, recycle, and repurpose products; and 2) discovering and implementing the systems needed to transform global economic growth, drive human prosperity, and replenish the planet's resources.

Strategy and Communication for Innovation Nicole Pfeffermann, Tim Minshall, Letizia Mortara, 2014-01-09 The innovation economy sets new standards for global business and requires efficient innovation management to plan, execute and evaluate innovation activities, establish innovation capability and coordinate resources and capacities for innovation on an intra- and inter-organizational level. Communication has become a critical factor underpinning successful innovation. As a new communication field, innovation communication facilitates the successful launches of new products and services, the establishment of stakeholder relationships, and the strengthening of corporate reputation in the long-run. Consequently, firms today need to develop a strong portfolio of communication tools as an integral part of their strategic innovation management activities. This new edition mainly concentrates on emerging approaches and methods for integrating communication as part of strategic innovation management. A key theme is the provision of an integrated perspective to bridge the gap between innovation management and communication management at both strategic and operational levels. This book makes an important contribution to this evolving academic domain by providing multiple perspectives on the latest research on innovation communication and strategic open innovation. It also provides guidance for managers seeking to understand the diverse ways by which they can leverage communication to support successful innovation.

Forgotten Connections Klaus Mollenhauer, 2013-10-30 Klaus Mollenhauer's *Forgotten Connections: On Culture and Upbringing* is internationally regarded as one of the most important German contributions to educational and curriculum theory in the 20th century. Appearing here in English for the first time, the book draws on Mollenhauer's concern for social justice and his profound awareness of the pedagogical tension between the inheritance of the past and the promise of the future. The book focuses on the idea of *Bildung*, in which philosophy and education come together to see upbringing and maturation as being much more about holistic experience than skill development. This translation includes a detailed introduction from Norm Friesen, the book's translator and editor. This introduction contextualizes the original publication and discusses its application to education today. Although Mollenhauer's work focused on content and culture, particularly from a German perspective, this book draws on philosophy and sociology to offer internationally relevant responses to the challenge of communicating cultural values and understandings to new generations. *Forgotten Connections* will be of value to students, researchers and practitioners working in the fields of education and culture, curriculum studies, and in educational and social foundations.

Mobile Health Sasan Adibi, 2015-02-18 This book offers a comprehensive report on the technological aspects of Mobile Health (mHealth) and discusses the main challenges and future directions in the field. It is divided into eight parts: (1) preventive and curative medicine; (2) remote health monitoring; (3) interoperability; (4) framework, architecture, and software/hardware systems; (5) cloud applications; (6) radio technologies and applications; (7) communication networks and systems; and (8) security and privacy mechanisms. The first two parts cover sensor-based and bedside systems for remotely monitoring patients' health condition, which aim at preventing the development of health problems and managing the prognosis of acute and chronic diseases. The related chapters discuss how new sensing and wireless technologies can offer accurate and cost-effective means for monitoring and evaluating behavior of individuals with dementia and psychiatric disorders, such as wandering behavior and sleep impairments. The following two parts focus on architectures and higher level systems, and on the challenges associated with their interoperability and scalability, two important aspects that stand in the way of the widespread deployment of mHealth systems. The remaining parts focus on telecommunication support systems for mHealth, including radio technologies, communication and cloud networks, and secure health-related applications and systems. All in all, the book offers a snapshot of the state-of-art in mHealth systems, and addresses the needs of a multidisciplinary audience, including engineers, computer scientists, healthcare providers, and medical professionals, working in both academia and the industry, as well as stakeholders at government agencies and non-profit organizations.

Medical Image Computing and Computer-Assisted Intervention – MICCAI 2016 Sebastien Ourselin, Leo Joskowicz, Mert R. Sabuncu, Gozde Unal, William Wells, 2016-10-17 The three-volume set LNCS 9900, 9901, and 9902 constitutes the refereed proceedings of the 19th International Conference on Medical Image Computing and Computer-Assisted Intervention, MICCAI 2016, held in Athens, Greece, in October 2016. Based on rigorous peer reviews, the program committee carefully selected 228 revised regular papers from 756 submissions for presentation in three volumes. The papers have been organized in the following topical sections: Part I: brain analysis, brain analysis - connectivity; brain analysis - cortical morphology; Alzheimer disease; surgical guidance and tracking; computer aided interventions; ultrasound image analysis; cancer image analysis; Part II: machine learning and feature selection; deep learning in medical imaging; applications of machine learning; segmentation; cell image analysis; Part III: registration and deformation estimation; shape modeling; cardiac and vascular image analysis; image reconstruction; and MR image analysis.

Image Processing: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2013-05-31 Advancements in digital technology continue to expand the image science field through the tools and techniques utilized to process two-dimensional images and videos. *Image Processing: Concepts, Methodologies, Tools, and Applications* presents a collection of research on this multidisciplinary field and the operation of multi-dimensional signals with systems that range from simple digital circuits to computers. This reference source is essential for researchers, academics, and students in the computer science, computer vision, and electrical engineering fields.

The Image of the Feminine in the Poetry of W.B. Yeats and Angelos Sikelianos Anastasia Psoni, 2018-12-19 Modernism, as a powerful movement, saw the literary and artistic traditions, as well as pure science, starting to evolve radically, creating a crisis, even chaos, in culture and society. Within this chaos, myth offered an ordered picture of that world employing symbolic and poetic images. Both W.B. Yeats and Angelos Sikelianos embraced myth and symbols because they liberate imagination and raise human consciousness, bringing together humans and the cosmos. Being opposed to the rigidity of scientific materialism that inhibits spiritual development, the two poets were waiting for a new age and a new religion, expecting that they, themselves, would inspire their community and usher in the change. In their longing for a new age, archaeology was a magnetic field for Yeats and Sikelianos, as it was for many writers and thinkers. After Sir Arthur Evans's discovery of the Minoan Civilization where women appeared so peacefully prominent, the dream of re-creating a gynocentric mythology was no longer a fantasy. In Yeats's and Sikelianos's gynocentric mythology, the feminine figure appears in various forms and, like in a drama, it plays different roles. Significantly, a gynocentric mythology permeates the work of the two poets and this mythology is of pivotal importance in their poetry, their poetics and even in their life as the intensity of their creative desire brought to them female personalities to inspire and guide them. Indeed, in Yeats's and Sikelianos's gynocentric mythology, the image of the feminine holds a place within a historical context taking the reader into a larger social, political and religious space.

The Posthuman Child Karin Murris, 2016-03-17 *The Posthuman Child* combats institutionalised ageist practices in primary, early childhood and teacher education. Grounded in a critical posthumanist perspective on the purpose of education, it provides a genealogy of psychology, sociology and philosophy of childhood in which dominant figurations of child and childhood are exposed as positioning child as epistemically and ontologically inferior. Entangled throughout this book are practical and theorised examples of philosophical work with student teachers, teachers, other practitioners and

children (aged 3-11) from South Africa and Britain. These engage arguments about how children are routinely marginalised, discriminated against and denied, especially when the child is also female, black, lives in poverty and whose home language is not English. The book makes a distinctive contribution to the decolonisation of childhood discourses. Underpinned by good quality picturebooks and other striking images, the book's radical proposal for transformation is to reconfigure the child as rich, resourceful and resilient through relationships with (non) human others, and explores the implications for literary and literacy education, teacher education, curriculum construction, implementation and assessment. It is essential reading for all who research, work and live with children.

Thoracic Image Analysis Jens Petersen,Raúl San José Estépar,Alexander Schmidt-Richberg,Sarah Gerard,Bianca Lassen-Schmidt,Colin Jacobs,Reinhard Beichel,Kensaku Mori,2020-11-03 This book constitutes the proceedings of the Second International Workshop on Thoracic Image Analysis, TIA 2020, held in Lima, Peru, in October 2020. Due to COVID-19 pandemic the conference was held virtually. COVID-19 infection has brought a lot of attention to lung imaging and the role of CT imaging in the diagnostic workflow of COVID-19 suspects is an important topic. The 14 full papers presented deal with all aspects of image analysis of thoracic data, including: image acquisition and reconstruction, segmentation, registration, quantification, visualization, validation, population-based modeling, biophysical modeling (computational anatomy), deep learning, image analysis in small animals, outcome-based research and novel infectious disease applications.

Ophthalmic Medical Image Analysis Huazhu Fu,Mona K. Garvin,Tom MacGillivray,Yanwu Xu,Yalin Zheng,2019-10-10 This book constitutes the refereed proceedings of the 6th International Workshop on Ophthalmic Medical Image Analysis, OMIA 2019, held in conjunction with the 22nd International Conference on Medical Imaging and Computer-Assisted Intervention, MICCAI 2019, in Shenzhen, China, in October 2019. The 22 full papers (out of 36 submissions) presented at OMIA 2019 were carefully reviewed and selected. The papers cover various topics in the field of ophthalmic image analysis.

Africa's Media Image in the 21st Century Mel Bunce,Suzanne Franks,Chris Paterson,2016-07-01 Africa's Media Image in the 21st Century is the first book in over twenty years to examine the international media's coverage of sub-Saharan Africa. It brings together leading researchers and prominent journalists to explore representation of the continent, and the production of that image, especially by international news media. The book highlights factors that have transformed the global media system, changing whose perspectives are told and the forms of media that empower new voices. Case studies consider questions such as: how has new media changed whose views are represented? Does Chinese or diaspora media offer alternative perspectives for viewing the continent? How do foreign correspondents interact with their audiences in a social media age? What is the contemporary role of charity groups and PR firms in shaping news content? They also examine how recent high profile events and issues been covered by the international media, from the Ebola crisis, and Boko Haram to debates surrounding the Africa Rising narrative and neo-imperialism. The book makes a substantial contribution by moving the academic discussion beyond the traditional critiques of journalistic stereotyping, Afro-pessimism, and 'darkest Africa' news coverage. It explores the news outlets, international power dynamics, and technologies that shape and reshape the contemporary image of Africa and Africans in journalism and global culture.

Essentials of Radiographic Physics and Imaging - E-Book James Johnston,Terri L. Fauber,2013-08-13 From basic physics principles to the actual process of producing diagnostic-quality x-rays, Essentials of Radiographic Physics and Imaging effectively guides you through the physics and imaging information you need to excel on your ARRT exam and as a professional radiographer. The text's clear language and logical organization help you easily master physics principles as they apply to imaging, plus radiation production and characteristics, imaging equipment, film screen image acquisition and processing, digital image acquisition and display, basics of computed tomography, image analysis, and more. Theory to Practice discussions help you link these principles to real-world applications and practice. An emphasis on practical information provides just what you need to know to pass the ARRT exam and to be a competent practitioner. Integrated coverage of digital radiography describes how to acquire, process, and display digital images, and explains the advantages and limitations of digital vs. conventional imaging processes. Theory to Practice succinctly explains the application of the concept being discussed and helps you understand how to use the information in clinical practice. Make the Connection links physics and imaging concepts to help you fully appreciate the importance of both subjects. Math applications demonstrate how mathematical concepts and formulas are applied in the clinical setting. Critical Concepts further explain and emphasize key points in the chapters. Learning features highlight important information with an outline, key terms, and objectives at the beginning of each chapter and a chapter summary at the end. A glossary of key terms provides a handy reference.

The World Book Encyclopedia ,2002 An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

Bridging Disciplinary Perspectives of Country Image Reputation, Brand, and Identity Diana Ingenhoff,Candace White,Alexander Buhmann,Spiro Kioussis,2018-11-09 Country image and related constructs, such as country reputation, brand, and identity, have been subjects of debate in fields such as marketing, psychology, sociology, communication, and political science. This volume provides an overview of current scholarship, places related research interests across disciplines in a common context, and illustrates connections among the constructs. Discussing how different scholarly perspectives can be applied to answer a broad range of related research questions, this volume aims to contribute to the emergence of a more theoretical, open, and interdisciplinary study of country image, reputation, brand, and identity.

Consumer Culture Theory ,2015-11-23 The chapters in this volume are selected from the best papers presented at the 10th Annual Consumer Culture Theory Conference held at the University of Arkansas, USA in June 2015. They represent the cutting edge in qualitative consumer research.

Manifesting Democracy? Maite Conde,2022-03-28 This volume explores the series of public protests – manifestações – that took place in a number of Brazilian cities in June and July 2013, when thousands of people took to the streets to demand improvements in urban infrastructures. Critically examines the role these protests played in politics, the political and their relationships to urban space and culture Analyses their connections to the emergence of a 'New Right' in Brazil, which saw the election of Bolsonaro Includes first-hand accounts and brings together contributions from both activists and scholars within a number of different fields (geography, history, philosophy, art, political economy) The first interdisciplinary English language anthology to address Brazil's 2013 protests and the broader political and cultural questions they raise A major contribution to Brazilian and Latin American Studies in Europe and the USA, as well as interdisciplinary studies of social movements, urban culture and politics

The Image Processing Handbook John C. Russ,F. Brent Neal,2018-09-03 Consistently rated as the best overall introduction to computer-based image processing, The Image Processing Handbook covers two-dimensional (2D) and three-dimensional (3D) imaging techniques, image printing and storage methods, image processing algorithms, image and feature measurement, quantitative image measurement analysis, and more. Incorporating image processing and analysis examples at all scales, from nano- to astro-, this Seventh Edition: Features a greater range of computationally intensive algorithms than previous versions Provides better organization, more quantitative results, and new material on recent developments Includes completely rewritten chapters on 3D imaging and a thoroughly revamped chapter on statistical analysis Contains more than 1700 references to theory, methods, and applications in a wide variety of disciplines Presents 500+ entirely new figures and images, with more than two-thirds appearing in color The Image Processing Handbook, Seventh Edition delivers an accessible and up-to-date treatment of image processing, offering broad coverage and comparison of algorithms, approaches, and outcomes.

Computational Pathology and Ophthalmic Medical Image Analysis Danail Stoyanov,Zeike Taylor,Francesco Ciompi,Yanwu Xu,Anne Martel,Lena Maier-Hein,Nasir Rajpoot,Jeroen van der Laak,Mitko Veta,Stephen McKenna,David Snead,Emanuele Trucco,Mona K. Garvin,Xin Jan Chen,Hrvoje Bogunovic,2018-09-13 This book constitutes the refereed joint proceedings of the First International Workshop on Computational Pathology, COMPAY 2018, and the 5th International Workshop on Ophthalmic Medical Image Analysis, OMIA 2018, held in conjunction with the 21st International Conference on Medical Imaging and Computer-Assisted Intervention, MICCAI 2018, in Granada, Spain, in September 2018. The 19 full papers (out of 25 submissions) presented at COMPAY 2018 and the 21 full papers (out of 31 submissions) presented at OMIA 2018 were carefully reviewed and selected. The COMPAY papers focus on artificial intelligence and deep learning. The OMIA papers cover various topics in the field of ophthalmic image analysis.

Image Segmentation Tao Lei,Asoke K. Nandi,2022-09-26 Image Segmentation Summarizes and improves new theory, methods, and applications of current image segmentation approaches, written by leaders in the field The process of image segmentation divides an image into different regions based on the characteristics of pixels, resulting in a simplified image that can be more efficiently analyzed. Image segmentation has wide applications in numerous fields ranging from industry detection and bio-medicine to intelligent transportation and architecture. Image Segmentation: Principles, Techniques, and Applications is an up-to-date collection of recent techniques and methods devoted to the field of computer vision. Covering fundamental concepts, new theories and approaches, and a variety of practical applications including medical imaging, remote sensing, fuzzy clustering, and watershed transform. In-depth chapters present innovative methods developed by the authors—such as convolutional neural networks, graph convolutional networks, deformable convolution, and model compression—to assist graduate students and researchers apply and improve image segmentation in their work. Describes basic principles of image segmentation and related mathematical methods such as clustering, neural networks, and mathematical morphology. Introduces new methods for achieving rapid and accurate image segmentation based on classic image processing and machine learning theory. Presents techniques for improved convolutional neural networks for scene segmentation, object recognition, and change detection, etc. Highlights the effect of image segmentation in various application scenarios such as traffic image analysis, medical image analysis, remote sensing applications, and material analysis, etc. Image Segmentation: Principles, Techniques, and Applications is an essential resource for undergraduate and graduate courses such as image and video processing, computer vision, and digital signal processing, as well as researchers working in computer vision and image analysis looking to improve their techniques and methods.
