Look Me in the Eye John Elder Robison, 2008-09-09 NEW YORK TIMES BESTSELLER “As sweet and funny and sad and true and heartfelt a memoir as one could find.” —from the foreword by Augusten Burroughs Ever since he was young, John Robison longed to connect with other people, but by the time he was a teenager, his odd habits—an inclination to blurt out non sequiturs, avoid eye contact, dismantle radios, and dig five-foot holes (and stick his younger brother, Augusten Burroughs, in them)—had earned him the label “social deviant.” It was not until he was forty that he was diagnosed with a form of autism called Asperger’s syndrome. That understanding transformed the way he saw himself—and the world. A born storyteller, Robison has written a moving, darkly funny memoir about a life that has taken him from developing exploding guitars for KISS to building a family of his own. It’s a strange, sly, indelible account—sometimes alien yet always deeply human.

In the Eye of All Trade Michael J. Jarvis, 2012-12-01 In an exploration of the oceanic connections of the Atlantic world, Michael J. Jarvis recovers a mariner’s view of early America as seen through the eyes of Bermuda’s seafarers. The first social history of eighteenth-century Bermuda, this book profiles how one especially intensive maritime community capitalized on its position in the eye of all trade. Jarvis takes readers aboard small Bermudian sloops and follows white and enslaved sailors as they shuttled cargoes between ports, raked salt, harvested timber, salvaged shipwrecks, hunted whales, captured prizes, and smuggled contraband in an expansive maritime sphere spanning Great Britain’s North American and Caribbean colonies. In doing so, he shows how humble sailors and seafaring slaves operating small family-owned vessels were significant but underappreciated agents of Atlantic integration. The American Revolution starkly revealed the extent of British America’s integration before 1775 as it shattered interregional links that Bermudians had helped to forge. Reliant on North America for food and customers, Bermudians faced disaster

at the conflict's start. A bold act of treason enabled islanders to continue trade with their rebellious neighbors and helped them to survive and even prosper in an Atlantic world at war. Ultimately, however, the creation of the United States ended Bermuda's economic independence and doomed the island's maritime economy.

The Critical Eye Lyle Rexer, 2019-11-04 Based on the highly successful course at the School of Visual Arts developed by the author, this book provides a comprehensive approach to the critical understanding of photography through an in-depth discussion of fifteen photographs and their contexts – historical, generic, biographical and aesthetic. This book presents an intensive course in looking at photographs, open to undergraduates and general audiences alike. Rexer argues that by concentrating on fifteen carefully chosen works it is possible to understand the history, development and contemporary situation of photography. Looking to images by photographers such as Roland Fischer, Nancy Rexroth and Ernest Cole, *The Critical Eye* is the only book to address the totality of issues involved in photography, from authorial self-consciousness to the role of the audience. Its subjects are not limited to art photography but include vernacular images, commercial genres and anthropology. With every chapter it seeks to link the history of photography to current practice. This highly illustrated and beautiful book provides a much-needed introduction to image production.

The Mind's Eye Oliver Sacks, 2010-10-26 In *The Mind's Eye*, Oliver Sacks tells the stories of people who are able to navigate the world and communicate with others despite losing what many of us consider indispensable senses and abilities: the power of speech, the capacity to recognize faces, the sense of three-dimensional space, the ability to read, the sense of sight. For all of these people, the challenge is to adapt to a radically new way of being in the world. There is Lilian, a concert pianist who becomes unable to read music and is eventually unable even to recognize everyday objects, and Sue, a neurobiologist who has never seen in three dimensions, until she suddenly acquires stereoscopic vision

in her fifties. There is Pat, who reinvents herself as a loving grandmother and active member of her community, despite the fact that she has aphasia and cannot utter a sentence, and Howard, a prolific novelist who must find a way to continue his life as a writer even after a stroke destroys his ability to read. And there is Dr. Sacks himself, who tells the story of his own eye cancer and the bizarre and disconcerting effects of losing vision to one side. Sacks explores some very strange paradoxes—people who can see perfectly well but cannot recognize their own children, and blind people who become hyper-visual or who navigate by “tongue vision.” He also considers more fundamental questions: How do we see? How do we think? How important is internal imagery—or vision, for that matter? Why is it that, although writing is only five thousand years old, humans have a universal, seemingly innate, potential for reading? *The Mind’s Eye* is a testament to the complexity of vision and the brain and to the power of creativity and adaptation. And it provides a whole new perspective on the power of language and communication, as we try to imagine what it is to see with another person’s eyes, or another person’s mind.

The Mind's Eye Ralph Radach, Jukka Hyona, Heiner Deubel, 2003-06-05 The book provides a comprehensive state-of-the-art overview of current research on cognitive and applied aspects of eye movements. The contents include peer-reviewed chapters based on a selection of papers presented at the 11th European Conference on Eye Movements (Turku, Finland 2001), supplemented by invited contributions. The ECEM conference series brings together researchers from various disciplines with an interest to use eye-tracking to study perceptual and higher order cognitive functions. The contents of the book faithfully reflect the scope and diversity of interest in eye-tracking as a fruitful tool both in basic and applied research. It consists of five sections: visual information processing and saccadic eye movements; empirical studies of reading and language production;

computational models of eye movements in reading; eye-tracking as a tool to study human-computer interaction; and eye movement applications in media and communication research. Each section is concluded by a commentary chapter by one of the leading authorities in the field. These commentaries discuss and integrate the contributions in the section and provide an expert view on the most significant present and future developments in the respective areas. The book is a reference volume including a large body of new empirical work but also principal theoretical viewpoints of leading research groups in the field.

The Eye of Minds (The Mortality Doctrine, Book One) James Dashner, 2013-10-08 The world is virtual, but the danger is real in book one of the bestselling Mortality Doctrine series, the next phenomenon from the author of the Maze Runner series, James Dashner. Includes a sneak peek of The Fever Code, the highly-anticipated conclusion to the Maze Runner series—the novel that finally reveals how the maze was built! The VirtNet offers total mind and body immersion, and the more hacking skills you have, the more fun it is. Why bother following the rules when it's so easy to break them? But some rules were made for a reason. Some technology is too dangerous to fool with. And one gamer has been doing exactly that, with murderous results. The government knows that to catch a hacker, you need a hacker. And they've been watching Michael. If he accepts their challenge, Michael will need to go off the VirtNet grid, to the back alleys and corners of the system human eyes have never seen—and it's possible that the line between game and reality will be blurred forever. The author who brought you the #1 New York Times bestselling MAZE RUNNER series and two #1 movies—The Maze Runner and The Scorch Trials—now brings you an electrifying adventure trilogy an edge-of-your-seat adventure that takes you into a world of hyperadvanced technology, cyber terrorists, and gaming beyond your wildest dreams . . . and your worst nightmares. Praise for the Bestselling MORTALITY DOCTRINE series: "Dashner takes full

advantage of the Matrix-esque potential for asking ‘what is real.’” —io9.com “Set in a world taken over by virtual reality gaming, the series perfectly capture[s] Dashner’s hallmarks for inventiveness, teen dialogue and an ability to add twists and turns like no other author.” —MTV.com “A brilliant, visceral, gamified mash-up of The Matrix and Inception, guaranteed to thrill even the non-gaming crowd.” —Christian Science Monitor

In the Eye of the Wild Nastassja Martin, 2021-11-16 After enduring a vicious bear attack in the Russian Far East’s Kamchatka Peninsula, a French anthropologist undergoes a physical and spiritual transformation that forces her to confront the tenuous distinction between animal and human. *In the Eye of the Wild* begins with an account of the French anthropologist Nastassja Martin’s near fatal run-in with a Kamchatka bear in the mountains of Siberia. Martin’s professional interest is animism; she addresses

philosophical questions about the relation of humankind to nature, and in her work she seeks to partake as fully as she can in the lives of the indigenous peoples she studies. Her violent encounter with the bear, however, brings her face-to-face with something entirely beyond her ken—the untamed, the nonhuman, the animal, the wild. In the course of that encounter something in the balance of her world shifts. A change takes place that she must somehow reckon with. Left severely mutilated, dazed with pain, Martin undergoes multiple operations in a provincial Russian hospital, while also being grilled by the secret police. Back in France, she finds herself back on the operating table, a source of new trauma. She realizes that the only thing for her to do is to return to Kamchatka. She must discover what it means to have become, as the Even people call it, *medka*, a person who is half human, half bear. *In the Eye of the Wild* is a fascinating, mind-altering book about terror, pain, endurance, and self-transformation, comparable in its intensity of perception and originality of style to J. A. Baker's classic *The Peregrine*. Here Nastassja Martin takes us to the farthest limits of human being.

Eye Guidance in Reading and Scene Perception G.

Underwood, 1998-07-16 The distinguished contributors to this volume have been set the problem of describing how we know where to move our eyes. There is a great deal of current interest in the use of eye movement recordings to investigate various mental processes. The common theme is that variations in eye movements indicate variations in the processing of what is being perceived, whether in reading, driving or scene perception. However, a number of problems of interpretation are now emerging, and this edited volume sets out to address these problems. The book investigates controversies concerning the variations in eye movements associated with reading ability, concerning the extent to which text is used by the guidance mechanism while reading, concerning the relationship between eye movements and the control of other body movements, the

relationship between what is inspected and what is perceived, and concerning the role of visual control attention in the acquisition of complex perceptual-motor skills, in addition to the nature of the guidance mechanism itself. The origins of the volume are in discussions held at a meeting of the European Society for Cognitive Psychology (ESCOP) that was held in Wurzburg in September 1996. The discussions concerned the landing effect in reading, an effect, that if substantiated, would provide evidence of the use of parafoveal information in eye guidance, and these discussions were explored in more detail at a small meeting in Chamonix, in February 1997. Many of the contributors to this volume were present at the meeting, but the arguments were not resolved in Chamonix either. Other leaders in the field were invited to contribute to the discussion, and this volume is the product. The argument remains unresolved, but the problem is certainly clearer.

Visual and Oculomotor Functions Géry d'. Ydewalle, Johan van Rensbergen, 1994 Hardbound. A collection of contemporary work in various areas of eye-movement research with an emphasis on physiological aspects is presented in this book. The contributions are divided into six sections: I. saccadic eye movements; II. smooth pursuit and motion perception; III. eye movements in pathology and clinical settings; IV. neurophysiology of eye movements; V. optokinetic nystagmus; and VI. methods. This volume provides updated information on the most recent research on eye movements carried out mainly in Europe.
