Symmetry-Adapted Machine Learning for

Information Security James (Jong Hyuk) Park, 2020-12-15

Symmetry-adapted machine learning has shown encouraging ability to mitigate the security risks in information and communication technology (ICT) systems. It is a subset of artificial intelligence (AI) that relies on the principles of processing future events by learning past events or historical data. The autonomous nature of symmetry-adapted machine learning supports effective data processing and analysis for security detection in ICT systems without the interference of human authorities. Many industries are developing machine-learning-adapted solutions to support security for smart hardware, distributed computing, and the cloud. In our Special Issue book, we focus on the deployment of symmetry-adapted machine

learning for information security in various application areas. This security approach can support effective methods to handle the dynamic nature of security attacks by extraction and analysis of data to identify hidden patterns of data. The main topics of this Issue include malware classification, an intrusion detection system, image watermarking, color image watermarking, battlefield target aggregation behavior recognition model, IP camera, Internet of Things (IoT) security, service function chain, indoor positioning system, and crypto-analysis.

Security Management for Healthcare Bernard J. Scaglione, 2019-03-04 The healthcare industry is changing daily. With the advent of the Affordable Care Act and now the changes being made by the current administration, the financial outlook for healthcare is uncertain. Along with natural disasters, new diseases, and ransomware new challenges have developed for the healthcare security professional. One of the top security issues effecting hospitals today is workplace violence. People don't usually act violently out of the blue. There are warning signs that can be missed or don't get reported or, if they are reported, they may not be properly assessed and acted upon. Healthcare facilities need to have policies and procedures that require reporting of threatening or unusual behaviors. Having preventive policies and procedures in place is the first step in mitigating violence and providing a safe and security hospital. Persons working in the healthcare security field need to have information and tools that will allow them to work effectively within the healthcare climate. This holds true for security as well. Security professionals need to understand their risks and work to effectively mitigate threats. The author describes training techniques that can be accomplished within a limited budget. He explains how to manage staff more efficiently in order to save money and implement strategic plans to help acquire resources within a restricted revenue environment. Processes to manage emergent events, provide risk assessments, evaluate technology and understand information technology. The future of healthcare is uncertain, but proactive prevention and effective resolution provide the resources necessary to meet the challenges of the current and future healthcare security environment.
