Swipe, Scan, Shop Kate Schaefer,2021-03-11 Successful fashion merchandising, branding and communication start with satisfyingly sensory and interactive shopping experiences. With Kate Schaefer's beautifully illustrated and practical book, learn how retailers create these experiences to connect with shoppers, enhance the retail experience, and achieve brand loyalty. With company highlights from brands such as Amazon Go, FIT:MATCH and Sephora, Swipe, Scan, Shop shows how fashion retailers are embracing the omnichannel retail experience, by using virtual and augmented reality, beacon technologies and facial recognition, among others. As shoppers become more dependent on digital devices as part of their shopping experience, visual merchandisers are adapting by incorporating mobile tech to tell a story, alert shoppers of product locations and inventory levels, and allow for the customization of products and sharing with friends. With a companion website that includes resources and links to further information and videos discussed in the book, this practical guide shows how to inform, entice, and engage customers by incorporating social technology throughout the shopping experience.

**Cancer Prevention and Management through Exercise and Weight Control** Anne McTiernan,2016-04-19 “..it is increasingly clear that cancer is also a disease of inertia. In this book, a broadly multidisciplinary group presents the evidence and provides the recommendations. ... The antidote to diseases of inertia is movement — let’s move!” John Potter, M.D.,Ph.D., from the Foreword The American Cancer Society estimates that a third of all cancer deaths could be prevented through avoidance of obesity and the rejection of sedentary lifestyles. The World Health Organization also supports this claim. Additionally, these and other organizations now recognize the role that activity can play in improving the quality of life for cancer patients. Cancer Prevention and Management through Exercise and Weight Control provides us with the support necessary to make a call to action. It brings together the contributions of world-class researchers to lay out the evidence and a plan of attack for coping with this crisis. The text begins by focusing on the research methods used in assessing the complex associations between activity, energy balance, and risk and prognosis. In comprehensive literature reviews, the authors consider the role of physical activity in the incidence of individual cancers, then explore the mechanisms that might explain this connection. They continue with a look at the relation between weight and cancer incidence, including a consideration of genetics. Research is also provided linking physical activity and weight control to a cancer patient’s quality of life and prognosis. The work concludes with ideas on how a plan of action might be implemented at the individual, clinical, and public health levels. It also provides guidance on incorporating

exercise and diet recommendations into clinical oncology practice.

Towards a neuroscience of social interaction Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities. However, in spite of being based on the premise of investigating the neural bases of interacting minds, the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition, i.e. social cognition from a detached observer's point of view, asking study participants to read out the mental states of others without being engaged in interaction with them. Consequently, the neural correlates of real-time social interaction have remained elusive and may —paradoxically— represent the 'dark matter' of social neuroscience. More recently, a growing number of researchers have begun to study online social cognition, i.e. social cognition from a participant's point of view, based on the assumption that there is something fundamentally different when we are actively engaged with others in real-time social interaction as compared to when we merely observe them. Whereas, for offline social cognition, interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms 'inside' the agent, it has been proposed that in online social cognition the knowledge of the other —at least in part— resides in the interaction dynamics 'between' the agents. Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition. In order to promote the development of the neuroscientific investigation of online social cognition, this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields, whose work involves the study of at least two individuals and sometimes two brains, rather than single individuals and brains responding to a social context. Specifically, this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms. Here, an important focal point will be to address the various roles of social interaction in contributing to and —at times— constituting our awareness of other minds. For this Research Topic, we, therefore, solicit reviews, original research articles, opinion and method papers, which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so. While focusing on work in the neurosciences, this Research Topic also welcomes

contributions in the form of behavioral studies, psychophysiological investigations, methodological innovations, computational approaches, developmental and patient studies. By focusing on cutting-edge research in social neuroscience and related fields, this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social.

**Molecular Imaging and Targeted Therapy** Shankar Vallabhajosula, 2023-03-31 This book, now published in its second edition, covers a wide range of topics relating to the use of radiopharmaceuticals. The basics of nuclear chemistry, radiochemistry, and radiopharmacology are considered in detail, regulatory issues are reviewed, and potential applications in drug development, translational medicine, clinical diagnostics, and targeted therapy are discussed. Compared with the first edition, the chapters on targeted therapy with alpha- and beta-emitting radiopharmaceuticals and theranostics are

completely new. Other chapters have been updated and revised as necessary. Radioisotope-based molecular imaging probes (radiopharmaceuticals) provide unprecedented insights into biochemistry and function in both normal and diseased states of living systems, with unbiased in vivo measurements of regional radiotracer activities offering very high specificity and sensitivity. No other molecular imaging technology, including functional magnetic resonance imaging, can provide such high sensitivity and specificity at a tracer level. This book, written by an experienced radiochemist and scientist, offers valuable insights into the full range of applications of this technology.
