Procedural Generation in Game Design Tanya Short, Tarn Adams, 2017-06-12 Making a game can be an intensive process, and if not planned accurately can easily run over budget. The use of procedural generation in game design can help with the intricate and multifarious aspects of game development; thus facilitating cost reduction. This

form of development enables games to create their play areas, objects and stories based on a set of rules, rather than relying on the developer to handcraft each element individually. Readers will learn to create randomized maps, weave accidental plotlines, and manage complex systems that are prone to unpredictable behavior. Tanya Short's and Tarn Adams' *Procedural Generation in Game Design* offers a wide collection of chapters from various experts that cover the implementation and enactment of procedural generation in games. Designers from a variety of studios provide concrete examples from their games to illustrate the many facets of this emerging sub-discipline. Key Features: Introduces the differences between static/traditional game design and procedural game design Demonstrates how to solve or avoid common problems with procedural game design in a variety of concrete ways Includes industry leaders' experiences and lessons from award-winning games World's finest guide for how to begin thinking about procedural design

Smart Wearable Devices in Healthcare—Methodologies, Applications, and Algorithms Chang Yan, Ming Zeng, Hong Zeng, Aiguo Song, Lei Zhang, 2023-12-14 Wearable health devices have been an emerging technology that enables an ambulatory acquisition of physiological signals to monitor health status over a long time (hours/days/weeks/years) inside and outside clinical environments. Big data and deep learning, in particular, are receiving a lot of attention in this rapidly growing digital health community. A key benefit of deep learning is to analyze and learn

massive amounts of data, which makes it especially valuable in healthcare since raw data is largely gathered from personalized wearable health devices. A wide range of users may benefit from unobstructed and even remote monitoring of pertinent or vital signs, which makes it easier to detect life-threatening diseases early, track the progression of pathologies and stress levels, evaluate the efficacy of therapies, provide low-cost and reliable diagnoses, etc. Today's personal health devices have provided an amazing insight into people's health and wellness, which allow clinicians to use these smart wearables to collect and analyze measuring data like electroencephalogram (EEG), electrocardiogram (ECG or EKG), respiration, heart rate, temperature level, blood oxygen, and blood pressure for health monitoring or clinical trials. This Research Topic mainly focuses on the technical revolution in wearable health systems, which aims to design more smart and useful wearables, contributing to a substantial change in the methodologies, applications, and algorithms of machine learning for wearable health devices. With the help of deep learning and sensor fusion capabilities from wearable health platforms, this data will be used more effectively, which can help to construct smart, novel, specific solutions to improve the quality of healthcare and capabilities of utilizing new deep learning technologies.

The Sinophone Cinema of Hou Hsiao-hsien: Culture, Style, Voice, and Motion Christopher Lupke,2016-03-25 Featuring rare interviews and sophisticated analysis, this book sheds light on Hou's narrative innovations and aesthetic triumphs while, along the way, unlocking some of the mysteries lurking behind one of the greatest bodies of cinematic work ever produced. -MICHAEL BERRY, University of California Santa Barbara Lupke's book provides comprehensive coverage, detailed contextualization, and insightful analysis from Hou's earliest works to his most recent accomplishment. The narrative is particularly compelling because it weaves cultural and social contexts and filmic texts together, and it brings various formal elements (image, editing, language, music) to bear upon one another. The book also includes careful comparison with another East Asian auteur Ozu Yasujirô. The Sinophone Cinema of Hou Hsiao-hsien is a significant addition. -GUO-JUIN, HONG, Duke University Lupke's comprehensive and original study excavates the literary inspirations of Hou's filmmaking, showing how Wu Nianzhen, Shen Congwen, and especially Zhu Tianwen shape his philosophy and aesthetic. In Lupke's convincing account, the anti-filial behaviors of their characters, which have attracted little critical attention, are the key to understanding their shared concern for the visible dissolution of the family in the modern world. In addition to its lucid analysis, this book contextualizes the filmmaking history of Hou in ways that illustrate the cultural and political significance of studying Taiwan Cinema in a global context. -HSIU-CHUANG DEPPMAN, Oberlin College Serving both as an excellent comprehensive introduction to the filmmaker and as a series of in-depth readings, this informative, engaging, and insightful book covers the full range of Hou's work. Writing clearly and elegantly, Lupke perceptively relates Hou's films to both literary and cinematic antecedents. Aside from Hou's well-known connection to Taiwan's 'native soil' literature, Lupke highlights as well the filmmaker's debt to earlier mainland Chinese authors such as Shen Congwen, Zhang Ailing, and Hu Lancheng. Hou's singular contribution to film aesthetics, summarized as 'stasis within motion,' comes through vividly and convincingly. -JASON MCGRATH, University of Minnesota *This book includes images.
