Machine Learning in Chemistry Jon Paul Janet,Heather J. Kulik,2020-05-28 Recent advances in machine learning or artificial intelligence for vision and natural language processing that have enabled the development of new technologies such as personal assistants or self-driving cars have brought machine learning and artificial intelligence to the forefront of popular culture. The accumulation of these algorithmic advances along with the increasing availability of large data sets and readily available high performance computing has played an important role in bringing machine learning applications to such a wide range of disciplines. Given the emphasis in the chemical sciences on the relationship between structure and function, whether in biochemistry or in materials chemistry, adoption of machine learning by chemistsderivations where they are important

Machine Learning in Chemistry Hugh M Cartwright,2020-07-15 Progress in the application of machine learning (ML) to the physical and life sciences has been rapid. A decade ago, the method was mainly of interest to those in computer science departments, but more recently ML tools have been developed that show significant potential across wide areas of science. There is a growing consensus that ML software, and related areas of artificial intelligence, may, in due course, become as fundamental to scientific research as computers themselves. Yet a perception remains that ML is obscure or esoteric, that only computer scientists can really understand it, and that few meaningful applications in scientific research exist. This book challenges that view. With contributions from leading research groups, it presents in-depth examples to illustrate how ML can be applied to real chemical problems. Through these examples, the reader can both gain a feel for what ML can and cannot (so far) achieve, and also identify characteristics that might make a problem in physical science amenable to a ML approach. This text is a valuable resource for scientists who are intrigued by the power of machine learning and want to learn more about how it can be applied in their own field.

Technology-Enabled Blended Learning Experiences for Chemistry Education and Outreach Fun Man Fung,Christoph Zimmermann,2021-07-03 Technology-Enabled Blended Learning Experiences for Chemistry Education and Outreach discusses new technologies and their potential for the advancement of chemistry education, particularly in topics that are difficult to demonstrate in traditional 2d media. The book covers the theoretical background of technologies currently in use (such as virtual and augmented reality), introducing readers to the current landscape and providing a solid foundation on how technology can be usefully integrated in both learning and teaching chemistry content. Other sections cover the implementation of technology, how to design a curriculum, and how new tactics can be applied to both outreach and evaluation efforts. Case studies supplement the information presented, providing the reader with practicable examples and applications of covered theories and technologies. Drawing on the broad experiences and unique insights of a global team of authors from a whole host of different backgrounds, the book aims to stimulate readers' creativity and inspire them to find their own novel applications of the techniques highlighted in this volume. Provides detailed information on the theoretical background of technology usage in chemistry education, including discussions of augmented and virtual reality Helps readers understand available options and make informed decisions on how to best utilize technology to enhance their chemistry teaching using concepts surrounding blended learning Presents examples of theory in practice through case studies that detail completed implementations from around the world

Play and Learning in Adulthood Nicola Whitton,2022-11-10 This book provides a theoretical and philosophical examination of games, play and playfulness and their relationships to learning and wellbeing in adulthood. It draws on an interdisciplinary literature base (including game-based learning, game studies, education, psychology, and game design) to present a critical manifesto for playful learning in post-compulsory education and lifelong learning. While there is an established body of work in games and learning in adulthood, and a wide literature on the value of play in childhood, the wider potential of play in adulthood and playfulness is under-explored and still emergent. This book offers a comprehensive overview of play in adulthood, exploring the benefits and drawbacks, examining why play in adulthood is different from play in childhood, the role of play in culture, and making an argument for why it is important in our society that we embrace the principles of playfulness.

Problem-based learning and pedagogies of play Marietjie Havenga, Jako Olivier, Byron J. Bunt, 2023-08-22 The focus of this book is original research regarding the implementation of problem-based learning and pedagogies of play as active approaches to foster self-directed learning. With the Fourth Industrial Revolution (4IR) in mind, educational institutions need to rethink teaching and learning for the future. As such, active engagement can be encouraged, as evident in this book, where problem-based learning drives learning through real-world problems, while pedagogy of play focuses on innovative environments where the action of play and learning are integrated with the aim of developing SDL. The following are addressed in the chapters: an overview of problem-based learning and pedagogy of play, metaliteracy, playful problem-based learning tasks, computational thinking in game-based tasks and geometry, solving puzzles, applying LEGO®, using drama as the pedagogy of play and implementing educational robotics. The empirical research findings disseminated in this book aim to inspire academics in the research focus area of self-directed learning with active learning approaches in the school and tertiary classroom that hold affordances to enhance 21st-century skills. Active learning is an umbrella term for pedagogies that mainstream student engagement, such as problem-based learning, cooperative learning, gamification, role-play and drama. This scholarly book highlights various engaging pedagogies.
