The Alphabet Effect Robert K. Logan,1986 The author's thesis is that Western civilization's thought patterns emerged because of its phonetic alphabet.

Writing Barry B. Powell,2012-02-15 Writing: Theory and History of the Technology of Civilization traces the origins of writing tied to speech from ancient Sumer through the Greek alphabet and beyond. Examines the earliest evidence for writing in Mesopotamia in the fourth millennium BC, the origins of purely phonographic systems, and the mystery of alphabetic writing Includes discussions of Ancient Egyptian, Chinese, and Mayan writing Shows how the structures of writing served and do serve social needs and in turn create patterns of social behavior Clarifies the argument with many illustrations

Letter Perfect David Sacks,2010-08-20 Letters are tangible language. Joining together in endless combinations to actually show speech, letters convey our messages and tell our stories. While we encounter these tiny shapes hundreds of times a day, we take for granted the long, fascinating history behind one of the most fundamental of human inventions -- the alphabet. The heart of the book is the 26 fact-filled "biographies" of letters A through Z, each one identifying the letter's particular significance for modern readers, tracing its development from ancient forms, and discussing its noteworthy role in literature and other media. We learn, for example, why the letter X has a sinister and sexual aura, how B came to signify second best, why the word "mother" in many languages starts with M, and what is the story of O. Packed with information and lavishly illustrated, Letter Perfect is not only accessible and entertaining, but essential to the appreciation of our own language.

The Idea of Writing Alex de Voogt, Joachim Friedrich Quack,2011-12-09 This exploration of the versatility of writing systems highlights their complexity when used for more than one language. The approaches of authors from different academic traditions provide a varied and expert account.

Semitic Writing G R Driver,1976-12-30 This is the third edition of the late Sir Godfrey Driver's Schweich Lectures, first delivered in 1944. The present edition is based on extensive revisions and additions made by the author himself. The third edition takes account of research and discoveries in the fields of Semitic epigraphy and the theory of writing. It deals with cuneiform scripts, the origins of alphabetic writing, its development from the earliest records until its transmission to the Greeks, and covers all the more important North-Semitic inscriptions. Theories regarding forms of letters, their names, place in the alphabetical sequence etc. are discussed at length.

Homer and the Origin of the Greek Alphabet Barry B. Powell,1996-10-28 A challenging and fascinating enquiry into the genesis of alphabetic writing.

Georgian George Hewitt,1995-12-20 The Caucasus for its size can boast more languages than any other region on earth. Of the 40 or so native tongues Georgian is the most widely spoken (by up to 5 million, of whom 3 million are ethnic Georgians). With its own unique script, Georgian has been written since the 4th century and has a rich literature of all genres. Outside Georgia, however, it has remained virtually unknown and unstudied, its grammatical intricacies being discussed by a small but ever growing succession of foreign specialists. The present work represents the first Reference Grammar of this challenging language to appear in English and is the summation of 20 years of intensive study by its author.

Writing Systems of the World Florian Coulmas,1991-01-08 This book is an account of the writing systems of the world from earliest times to the present. Its aim is to explore the complex ways in which writing systems relate to the language they depict. Writing, Coulmas contends, is not only the guide or garment of spoken language, but has a deep and lasting effect on the development of language itself. His study takes in Egyptian hieroglyphics and the cuneiform system of the ancient Near East; he describes Chinese writing, discussing why an apparently cumbersome system has been used continuously for more than 3,000 years; he ranges across the writing systems of western Asia and the Middle East, the Indian families and the various alphabetic traditions which had its origins in the multifarious world of Semitic writing and came to full bloom in pre-Classical Greece.

The World's Writing Systems Peter T. Daniels, William Bright,1996 Ranging from cuneiform to shorthand, from archaic Greek to modern Chinese, from Old Persian to modern Cherokee, this is the only available work in English to cover all of the world's writing systems from ancient times to the present. Describing scores of scripts in use now or in the past around the world, this unusually comprehensive reference offers a detailed exploration of the history and typology of writing systems. More than eighty articles by scholars from over a dozen countries explain and document how a vast array of writing systems work--how alphabets, ideograms, pictographs, and hieroglyphics convey meaning in graphic form. The work is organized in thirteen parts, each dealing with a particular group of writing systems defined historically, geographically, or conceptually. Arranged according to the chronological development of writing systems and their historical relationships within geographical areas, the scripts are divided into the following sections: the ancient Near East, East Asia, Europe, South Asia, Southeast Asia, and the Middle East. Additional parts address the ongoing process of decipherment of ancient writing systems; the adaptation of traditional scripts to new languages; new scripts invented in modern times; and graphic symbols for numerical, music, and movement notation. Each part begins with an introductory article providing the social and cultural context in which the group of writing systems was developed. Articles on individual scripts detail the historical origin of the writing system, its structure (with tables showing the forms of the written symbols), and its relationship to the phonology of the corresponding spoken language. Each writing system is illustrated by a passage of text, and accompanied by a romanized version, a phonetic transcription, and a modern English translation. A bibliography suggesting further reading concludes each entry. Matched by no other work in English, The World's Writing Systems is the only comprehensive resource covering every major writing system. Unparalleled in its scope and unique in its coverage of the way scripts relate to the languages they represent, this is a resource that anyone with an interest in language will want to own, and one that should be a part of every library's reference collection.

Encyclopedia of the Peoples of Asia and Oceania Barbara A. West,2010-05-19 Presents an alphabetical listing of information on the peoples of Asia and Oceania including origins, prehistory, history, culture, languages, and relationships to other cultures.

The Mysteries of the Alphabet Marc-Alain Ouaknin,1999 Traces the origins of the alphabet beginning with the first pictograms of 5,000 years ago, describing the changes the alphabet has gone through in different countries and cultures.

Civilization Before Greece and Rome H. W. F. Saggs, For many centuries it was accepted that civilization began with the Greeks and Romans. During the last two hundred years, however, archaeological discoveries in Egypt, Mesopotamia, Crete, Syria, Anatolia, Iran, and the Indus Valley have revealed that rich cultures existed in these regions some two thousand years before the Greco-Roman era. In this fascinating work, H.W.F Saggs presents a wide-ranging survey of the more notable achievements of these societies, showing how much the ancient peoples of the Near and Middle East have influenced the patterns of our daily lives. Saggs discusses the invention of writing, tracing it from the earliest pictograms (designed for account-keeping) to the Phoenician alphabet, the source of the Greek and all European alphabets. He investigates the curricula, teaching methods, and values of the schools from which scribes graduated. Analyzing the provisions of some of the law codes, he illustrates the operation of international law and the international trade that it made possible. Saggs highlights the creative ways that these ancient peoples used their natural resources, describing the vast works in stone created by the Egyptians, the development of technology in bronze and iron, and the introduction of useful

plants into regions outside their natural habitat. In chapters on mathematics, astronomy, and medicine, he offers interesting explanations about how modern calculations of time derive from the ancient world, how the Egyptians practiced scientific surgery, and how the Babylonians used algebra. The book concludes with a discussion of ancient religion, showing its evolution from the most primitive forms toward monotheism.

The Literature of Georgia Donald Rayfield,2013-12-16 The first comprehensive and objective history of the literature of Georgia, revealed to be unique among those of the former Byzantine and Russian empires, both in its quality and its 1500 years' history. It is examined in the context of the extraordinarily diverse influences which affected it - from Greek and Persian to Russian and modern European literature, and the folklore of the Caucasus.

Processing of Visible Language Paul A. Kolers,2013-11-21 The second symposium on processing visible language constituted a different mix of participants from the first. Greater emphasis was given to the design of language, both in its historical development and in its current display; and to practical questions associated with machine-implementation oflanguage, in the interactions of person and computer, and in the characteristics of the physical and environmental objects that affect the interaction. Another change was that a special session on theory capped the proceedings. Psychologists remained heavily involved, however, both as contributors to and as discussants of the work presented. The motivation of the conferences remains one of bringing together graphic designers, engineers, and psychologists concerned with the display and acquisition of visible language. The papers separately tended to emphasize the one of the three disciplines that mark their authors' field of endeavor, but are constructed to be general rather than parochial. Moreover, within the three disciplines, papers emphasized either the textual or the more pictorial aspects. For example, a session on writing systems ranged from principles that seem to characterize all such systems to specific papers on ancient Egyptian writing, modern Korean, and English shorthand. The complementary session on the nontextual media opened with a discussion of general principles of pictorial communication and included papers on communicating instructions, general information, or religious belief through designs and other pictorial forms, as well as a discussion. of misrepresentation.

The World of Late Antiquity Peter Brown,2024-03-07 A remarkable study in social and cultural change that explains how and why the late antique world (circa 150-750CE) came to differ from classical civilization.

Corpus Approaches to Social Media Sofia Rüdiger,Daria Dayter,2020-11-15 From Twitter to Reddit, Facebook, and WhatsApp - social media is a part of modern everyday life. Studying the language used on social media platforms presents great opportunities as well as challenges to corpus linguists. The contributions in Corpus Approaches to Social Media address technical, ethical, and methodological issues by showcasing in-depth social media studies as conducted by corpus scholars. The chapters are based on a variety of social media platforms and include corpus perspectives on the language of online communities, linguistic variation in short media texts, and the role of images in computer-mediated communication. A particularly strong point of the collection are the detailed accounts of the methodological aspects of working with social media corpora. The volume features research applying traditional corpus linguistic methods to social media data as well as novel and innovative research methods for the analysis of multimodal material and atypical corpus texts.
