A Lab of One's Own Rita Colwell, Sharon Bertsch McGrayne, 2021-08-17 Colwell, the first female director of the National Science Foundation, discusses the entrenched sexism in science, the elaborate detours women have taken to bypass the problem, and how to fix the system. When she first applied for a graduate fellowship in bacteriology, she was told, We don't waste fellowships on women. Over her six decades in science, as she encounters other women pushing back against the status quo, Colwell also witnessed the advances that could be made when men and women worked together. Here she offers an astute diagnosis of how to fix the problem of sexism in science-- and a celebration of the women pushing back. --

The American Lab C. Bruce Tarter, 2018-08-01 Behind the scenes of the Lawrence Livermore National Laboratory, the quintessential American lab. Nobel laureate Ernest O. Lawrence and renowned physicist Edward Teller

founded the Lawrence Livermore National Laboratory in 1952. A new ideas incubator, the Lab was at the heart of nuclear testing and the development of supercomputers, lasers, and other major technological innovations of the second half of the twentieth century. Many of its leaders became prominent figures in the technical and defense establishments, and by the end of the 1960s, Livermore was the peer of Los Alamos National Lab, a relationship that continues today. In *The American Lab*, former Livermore director C. Bruce Tarter offers unparalleled access to the inner workings of the Lab. Touching on Cold War nuclear science and the technological shift that occurred after the fall of the Berlin Wall, he traces the Lab's evolution from its founding under University of California management through its transfer to private oversight. Along the way, he highlights important episodes in that journey, from the invention of Polaris, the first submarine-launched ballistic missile, to the Lab's controversial role in the Star Wars program. He also describes Livermore's significant responsibilities in stockpile stewardship, the program that ensures the safety and reliability of the US nuclear arsenal. The book portrays the lab's extensive work on thermonuclear fusion, a potential source of unlimited energy; describes the development of the world's largest laser fusion installation, the National Ignition Facility; and examines a number of smaller projects, such as the Lab's participation in founding the Human Genome Project. Finally, it traces the relationship of the Lab to its federal sponsor, the Department of Energy, as it evolved from partnership to compliance with orders, a shift that affected all of the national laboratories. Drawing on oral histories, internal laboratory documents, and the author's personal experiences from more than fifty years as a Lab employee, *The American Lab* is an illuminating history of the Lab and its revolutionary work.

The Global Lab Adam Fejerskov, 2022-06-16 *The Global Lab* tells the story of a group of organizations and corporations using low-income countries as a laboratory. It reveals experiments with untested technologies, biometric humanitarian solutions, and radical methodologies for social change. The book maps out the political, institutional, and ethical coordinates of emergent transnational practices of experimentation, asking where and how this movement works, while unfolding the human, philosophical, and political consequences of its ideas and interventions. The book takes the reader through Silicon Valley, Africa, and Asia to understand the tangible and transformative implications of contemporary human experimentation. It follows a set of main protagonists, from the Bill and Melinda Gates Foundation to experimental economists known as the randomistas, to humanitarian organizations and pharmaceutical companies. These actors form a movement inspired by the logic of Silicon Valley about the need for fast-paced radical change and societal disruption, technological innovation as progress, and the privatization and commercialization of the human mind and body. Ultimately, the book examines the inequality of experimentation that is found in the erection of walls between us and them, and the imagined universal and often unquestioned value of scientific and technological progress.
