Control of Pancreatic Beta Cell Function and Plasticity in Health and Diabetes David J. Hill, 2016-12-02 Plasticity in insulin-producing cells (β -cells) of the pancreas is a major contributor to metabolic control. Targeted regeneration of pancreatic β -cells for the reversal of diabetes (by optimizing β -cells mass and proliferation to meet metabolic requirements and counter autoimmune response) is still a theoretical intervention. This monograph reviews the biology, ontogeny, capabilities, and present practical limitations of β -cell plasticity. Relevant biochemical pathways are described with the inclusion of information about how they change with aging, during pregnancy, and with diet. Readers will learn the following key aspects about β -cell plasticity: -current knowledge of pancreatic β -cells development, and how β -cell mass and proliferation change throughout the human lifespan -the mechanisms responsible for β -cell plasticity, based on animal models and clinical studies revealing environmental, epigenetic, endocrine and paracrine regulators -the therapeutic potential of resident stem cells within the pancreas / bone marrow and β -cell progenitors This monograph is essential reading for researchers interested in updated knowledge about the molecular and cellular biology of β -cells in the quest to find a reliable therapy for diabetes.

IUTAM Symposium on Dynamics and Control of Nonlinear Systems with Uncertainty H.Y. Hu, E. Kreuzer, 2007-07-26 This is a state-of-the-art treatise on the problems of both nonlinearity and uncertainty in the dynamics and control of engineering systems. The concept of dynamics and control implies the combination of dynamic analysis and control synthesis. It is essential to gain insight into the dynamics of a nonlinear system with uncertainty if any new control strategy is designed to utilize nonlinearity.

Transforming Growth Factor-Beta Protocols Philip H. Howe,2008-02-05 Philip H. Howe and a group of well-versed experimentalists present the first major volume a collection of indispensable classic and cutting-edge TGF β assays. Described in great detail to ensure robust and successful results, these readily reproducible techniques range from the growth inhibition assay for TGF β to methods for monitoring its interactions with the mediating proteins. Extensive notes discuss potential pitfalls and provide tips on how to avoid failures, and throughout, emphasis is given to detailing those technical steps critical for experimental success that are often omitted in the primary literature. Concise and highly practical, *Transforming Growth Factor-Beta Protocols* provides today's molecular and cell biologists-both expert and novice-with time-tested methods for the identification and analysis of the signal transduction pathways by which TGF β induces and modulates physiological behavior.

Advances in Intelligent Networking and Collaborative Systems Leonard Barolli,Isaac Woungang,Omar Khadeer Hussain,2017-08-14 The aim of this book is to provide the latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to intelligent social networks and collaborative systems, intelligent networking systems, mobile collaborative systems, secure intelligent cloud systems, etc., and to reveal synergies among various paradigms in the multi-disciplinary field of intelligent collaborative systems. It presents the Proceedings of the 9th International Conference on Intelligent Networking and Collaborative Systems (INCoS-2017), held on August 24–26, 2017 in Toronto, Canada. With the rapid evolution of the Internet, we are currently experiencing a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm that puts people at the very centre of networks and exploits the value of people's connections, relations and

collaborations. Social networks are also playing a major role in the dynamics and structure of intelligent Web-based networking and collaborative systems. Virtual campuses, virtual communities and organizations effectively leverage intelligent networking and collaborative systems by tapping into a broad range of formal and informal electronic relations, such as business-to-business, peer-to-peer and many types of online collaborative learning interactions, including the emerging e-learning systems. This has resulted in entangled systems that need to be managed efficiently and autonomously. In addition, the latest and powerful technologies based on Grid and wireless infrastructure as well as Cloud computing are now greatly enhancing collaborative and networking applications, but are also facing new issues and challenges. The principal objective of the research and development community is to stimulate research that leads to the creation of responsive environments for networking and, in the longer-term, the development of adaptive, secure, mobile, and intuitive intelligent systems for collaborative work and learning.

G Protein-Coupled Receptor Kinases (GRKs) and Beta-Arrestins: New Insights into Disease Regulators Yuichi Hattori, Martin C. Michel, 2020-03-10

Nervous Systems and Control of Behavior Charles Derby, Martin Thiel, 2014-09-24 Crustacean Nervous Systems and their Control of Behavior is the third volume of the series The Natural History of the Crustacea. This volume is on the functional organization of crustacean nervous systems, and how those nervous systems produce behavior. It complements other volumes on related topics of feeding biology, reproductive biology, endocrine systems, and behavioral ecology. There is a rich history of the study of the neurobiology of crustaceans, going back over 150 years. This has included studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments, as well as studying them as model organisms to understand basic biomedical

principles about neural function, such as sensory transduction and processing, synaptic transmission and integration, neuromodulation, and learning and memory. The volume has three sections that build progressively on each other. The first section is on the basic organizational features of the crustacean nervous system and the principles upon which it is built. The second section is on sensory ecology - the organization of each sensory system and how it is used in intra- and interspecific interactions, within an ecological context. The third section uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions, such as walking, escape, social interactions, and memory and learning. Taken together, the 20 chapters synthesize our modern understanding of the neural control of behavior in crustaceans, based on the most recent technologies in physiological recording, molecular biology, and computational science. This volume will be useful to students and researchers as a concise summary of current knowledge of crustacean neuroscience.
