Basics Lighting Design Roman Skowranek, 2017-05-22 Daylight is the most important element determining the mood and appearance of architecture, more so than all construction materials. In office buildings in particular, the good provision of daylight and matching artificial lighting installations make an important contribution to energy conservation – the better the use made of daylight, the less energy has to be consumed for artificial lighting. For this reason, typical architectural concepts have changed in recent years; enclosed buildings with full air-conditioning have increasingly made way to buildings that respond to the climate conditions of their environment, thereby using only a much reduced amount of energy without compromising on comfort. The BASICS Lighting Design volume includes the most important principles of daylight and artificial lighting design. Selection of subjects covered: Sizes and units Building concept design principles (layout design, building orientation and facade structure) Lighting design concepts Current daylighting and artificial lighting systems Solar screening Directing daylight

Lighting Design Christopher Cuttle, 2015-03-05 By reading this book, you will develop the skills to perceive a space and its contents in light, and be able to devise a layout of luminaires that will provide that lit appearance. Written by renowned lighting expert Christopher (Kit) Cuttle, the book: explains the difference between vision and perception, which is the distinction between providing lighting to make things visible, and providing it to influence the appearance of everything that is visible; demonstrates how lighting patterns generated by three-dimensional objects interacting with directional lighting are strongly influential upon how the visual perception process enables us to recognize object attributes, such as lightness, colourfulness, texture and gloss; reveals how a designer who understands the role of these lighting patterns in the perceptual process may employ them either to reveal, or to subdue, or to enhance the appearance of selected object attributes by creating appropriate spatial distributions of light; carefully explains calculational techniques and provides easy-to-use

spreadsheets, so that layouts of lamps and luminaires are derived that can be relied upon to achieve the required illumination distributions. Practical lighting design involves devising three-dimensional light fields that create luminous hierarchies related to the visual significance of each element within a scene. By providing you with everything you need to develop a design concept - from the understanding of how lighting influences human perceptions of surroundings, through to engineering efficient and effective lighting solutions – Kit Cuttle instills in his readers a new-found confidence in lighting design.

Light for Cities Ulrike Brandi, 2007 The improvement of public lighting is an effective and economical way to enhance the attractiveness of urban downtown areas. Many cities in Germany and Europe have already recognized this fact and used master plans to create entirely new systems of urban lighting. They have been motivated to do so by the desire to compete with other cities and to upgrade and enhance their city centers. Although this trend is widespread and enduring, a typology of urban lighting has not been available until now. As a concrete and practical guide, this book establishes first standards for the field. Drawing on the author's experience, it addresses the technical and planning aspects of the task and provides important information on feasibility and possible financing models. Organized systematically and with a wealth of color illustrations, detail drawings, and implementation plans, it is an indispensable guide to successfully interacting with other planners, government departments, and investors. Ulrike Brandi (b. 1957), Dipl. Des. IALD DWB, is a lighting designer and the managing director of ULRIKE BRANDI LICHT GmbH in Hamburg. She designs lighting solutions for commercial buildings, natural settings, and cities. The firm has realized more than 300 projects throughout the world. Christoph Geissmar-Brandi, (b. 1958), Dr. phil., is an art historian, exhibition curator, and the author of many books in the field.

Residential Lighting Design Marcus Steffen, 2014-07-31 Good lighting is essential to a building. An effective design is not just about introducing light into a space, but rather an appreciation of how the space will be used. A good lighting design is so intertwined with the building that it is only noticed in its absence. This book introduces the tools of the lighting designer and explains how to produce a lighting design for a home. Looking at the nature of light and introducing different lamps and light fittings available, it explains the basics of lighting design and how to provide atmosphere through the play of light and shadow. It gives room-by-room analysis of good lighting design and gives advice on controls, plus an overview of the pitfalls of dimming and energy saving. Illustrated throughout with 132 stunning images and creative ideas.
