**Protecting Information on Local Area Networks** James A Schweitzer, 2014-05-12 Protecting Information on Local Area Networks presents the various types of networks and explains why they are being expanded at such a rapid pace. This book considers how management can gain control of the valuable network-services information resources generally available. Organized into three parts encompassing seven chapters, this book begins with an overview of the various networks and their operations. This text then discusses the appropriate management actions to ensure some control over the use of networks and the business information resource. Other chapters consider the management rationale for network information security and explain the development of a company information network security policy. This book discusses as well security of network-connected personal computers. The final chapter deals with a number of major vulnerabilities of information when communicated or processed on network-connected personal computers. This book is a valuable resource for research scientists, technical security specialists, information systems specialists, and systems administrators.

**Local Area Network Handbook, Sixth Edition** John P. Slone, 2020-11-26 Today's enterprise cannot effectively function without a network, and today's enterprise network is almost always based on LAN technology. In a few short years, LANs have become an essential element of today's business environment. This time in the spotlight, while well deserved, has not come without a price. Businesses now insist that LANs deliver vast and ever-increasing quantities of business-critical information and that they do it efficiently, flawlessly, without fail, and most of all, securely. Today's network managers must consistently deliver this level of performance, and must do so while keeping up with ever changing, ever increasing demands without missing a beat. At the same time, today's IT managers must deliver business-critical information systems in an environment that has undergone radical paradigm shifts in such widely varied fields as computer architecture, operating systems, application development, and security. The Local Area Networks Handbook focuses on this collective environment, in which networking and information technology work together to create LAN-based enterprise networks. Topics have been selected and organized with this in mind, providing both depth and breadth of coverage. The handbook will provide you not only an understanding of how LANs work and how to go about selecting and implementing LAN products, but also of how to leverage LAN capabilities for the benefit of your enterprise.

*Linked Local Area Networks* Alan J. Mayne, 1986 Updated to reflect significant developments in computer networking, this reference continues its reputation as the premier working guide to local area, wide area, and linked local area networks with local, national, and international reach. Beginning with a broad overview of computer networks, it summarizes the many available systems, their differences and similarities, and their place in the automated office. Also covers network systems and services and provides some practical insights into the impact of computer networking, all aided by step-by-step instructions and up-to-the-minute applications in a variety of fields and technologies.

**New Trends in Multimedia and Network Information Systems** K. Choroś, A. Zgrzywa, A. Siemiński, 2008-08-21 New Trends in Multimedia and Network Information Systems discusses a very broad scope of subject matters including multimedia systems in their widest sense, web systems and network technologies. This monograph also includes texts devoted to more traditional information systems that draw on the experience of the multimedia and network systems. Each of the discussed research trends is considered from both theoretical and practical viewpoints. Imposing a clear-cut classification for

such a diverse research area is not an easy task. The challenge is even greater due to the fact that in this book the focus lies on the most topical research work of scientists from all over the world. The studies are original and were not published anywhere else. The chapters represent the dominant advances in computer information systems and it is worth emphasizing that in most cases the research work relies heavily on the achievements and techniques developed originally in the area of artificial intelligence. As a result, the monograph is divided into four major parts: multimedia information technology; data processing in information systems; information system applications; and web systems and network technologies. Each of these parts covers a couple of chapters on detailed subject fields that comprise the area of its title.

**Local Area Networks** James E. Goldman, 1997 These days, networks and information systems are more than just technological service segments of a company. They are vital variables in the business equation. This book takes a business-first approach to networks, focusing on how to analyze, implement and manage local area networks. Drawing on extensive case studies, it provides a thorough examination of the business application, data, network, and technology issues surrounding the successful implementation of local area network-based client/server systems. It also provides working models readers can use to organize their own systems.

Multimedia and Network Information Systems Aleksander Zgrzywa, Kazimierz Choroś, Andrzej Siemiński, 2016-09-05 Recent years have seen remarkable progress on both advanced multimedia data processing and intelligent network information systems. The objective of this book is to contribute to the development of multimedia processing and the intelligent information systems and to provide the researchers with the essentials of current knowledge, experience and know-how. Although many aspects of such systems have already been under investigation, but there are many new that wait to be discovered and defined. The book contains a selection of 36 papers based on original research presented during the 10th International Conference on Multimedia &

Network Information Systems (MISSI 2016) held on 14-16 September 2016 in Wrocław, Poland. The papers provide an overview the achievements of researches from several countries in three continents. The volume is divided into five parts: (a) Images and Videos - Virtual and Augmented Reality, (b) Voice Interactions in Multimedia Systems, (c) Tools and Applications, (d) Natural Language in Information Systems, and (e) Internet and Network Technologies. The book is an excellent resource for researchers, those working in multimedia, Internet, and Natural Language technologies, as well as for students interested in computer science and other related fields.
